

ICPC-3 and the linkages to SNOMED-CT

- Kees van Boven, eo WONCA ICPC Foundation
- Diego Schrans, Chair of the WONCA International Classification Committee (WICC)

Basic principles for developing ICPC-3

How do we use the information from primary care to improve **individual patient** and **population health**?

How do we develop ICPC-3 to address the challenges of care for people with comorbidities?

How do we truly adopt person-centeredness and goal-orientation into the ICPC-3?

THE ICPC-3 CONTENT MODEL

Any Class/Category in ICPC is represented by:

Descriptive characteristics

1. TITLE of Entity: Name of class

- a. Textual description, concise and detailed
- b. Inclusion – Exclusion - Index terms/synonyms – Coding hint - Note

2. Type of Entity

- a. Non-problem related
 - Prevention
 - Screening
- b. Body / Organ System
 - Symptoms, complaints and abnormal findings
 - Diagnosis and Health Problems
- c. Social Problems (Z-chapter)
 - Social and Environment
- d. Interventions (patient related) and Processes (administrative)
- e. Functioning
 - Activity and Participation, Functions
- f. Functioning related factors
 - Personal factors, Environmental factors
- g. Regional Extensions
- h. Emergency Codes

3. Extension Codes

- a. Severity and/or – existing severity scales- ICF scale, stages
- b. Duration, course

Maintenance attributes

A. Unique identifier

B. Attributes (subset, adaptation, and special view flag) for:

1. Classes – in disease component (congenital, infectious, neoplasm, injury, immunology, life-style, other, unknown)
2. Classes – in environment component – context and contactReason)
3. Country adaptation
4. Research
5. Special indices (e.g. Primary Health Care Indicators, Public Health Care Indicators, and First aid or Resource Groupings, Case-mix)

C. Hierarchical relationships

Parents and children in the ICPC structure:

Chapter

Component

Classes / subclasses

D. Reference relationships

References to classes as in ICPC-1, ICPC-2, ICD-10, ICD-11, ICF, ICHI, Orphanet, GBD, SDG's, UHC, and terms as in SNOMED CT etc.

E. Other rules

The leading principles for the selection of classes

- The rationale for additions to ICPC-3 will still be: frequency and evidence based.
- Relevant Regional Extensions on content within ICPC-3 to suit National Primary Care needs.
- Covering every kind of contact in Primary and Community Care for all disciplines involved.
- Familiar will be the simplicity of the new ICPC-3, no excessive and theoretical subclasses or terms like most classifications and clinical terminologies.
- Residual classes only for 'other' specified.
- The content of ICPC-3 will be 'linked' to relevant classifications, such as ICD-10, ICD-11, ICF, ICHI,
 - clinical terminologies such as Snomed-CT, but also to previous versions of ICPC-1 , ICPC2.7, to the SDG's (United Nations' Sustainable Development Goals) and GBD's where possible and relevant.

REGISTER AND CODE

The primary purpose of health records is to provide a documented record.

Secondary uses of health records encompass such ones as medico-legal, quality management, education, research, public and population health, policy development, health statistics, health service management, case-mix analysis, accreditation, billing/finance/reimbursement.

For the secondary uses coding is essential

ICPC-3 AND PATIENT RECORDS

REASON FOR ENCOUNTER: fever AS03, headache NS01, pain in the joints LS20

SUBJECTIVE

History taking | Interview

In her neighbourhood people with **Dengue AD14.01**, unable to work 2F58 PSV.3

OBJECTIVE

Physical Findings

Partial examination A102, well hydrated, blood pressure 120/80 and no other abnormal findings. **The tourniquet test is negative A199**

ASSESSMENT

Diagnosis | Health Problem

Almost certain **Dengue infection AD14.01**

PLAN

Interventions | Processes of Care

Prescription A201 paracetamol and the **advice A203** to come back if she notices any signs of worsening

ICPC-3 AND PATIENT RECORDS

REASON FOR ENCOUNTER:
**routine child health
examination AG01**

We come for the
baby control visit

SUBJECTIVE

History taking | Interview

Baby is cheerful and has occasional colic
DS01

OBJECTIVE

Physical Findings

Complete examination A101, no
abnormal findings

ASSESSMENT

Diagnosis | Health Problem

Routine child health examination AG01

PLAN

Interventions | Processes of Care

Preventive immunisation A202, 6-in-
vaccine and MenB

Harmonisation within the Family of International Classifications

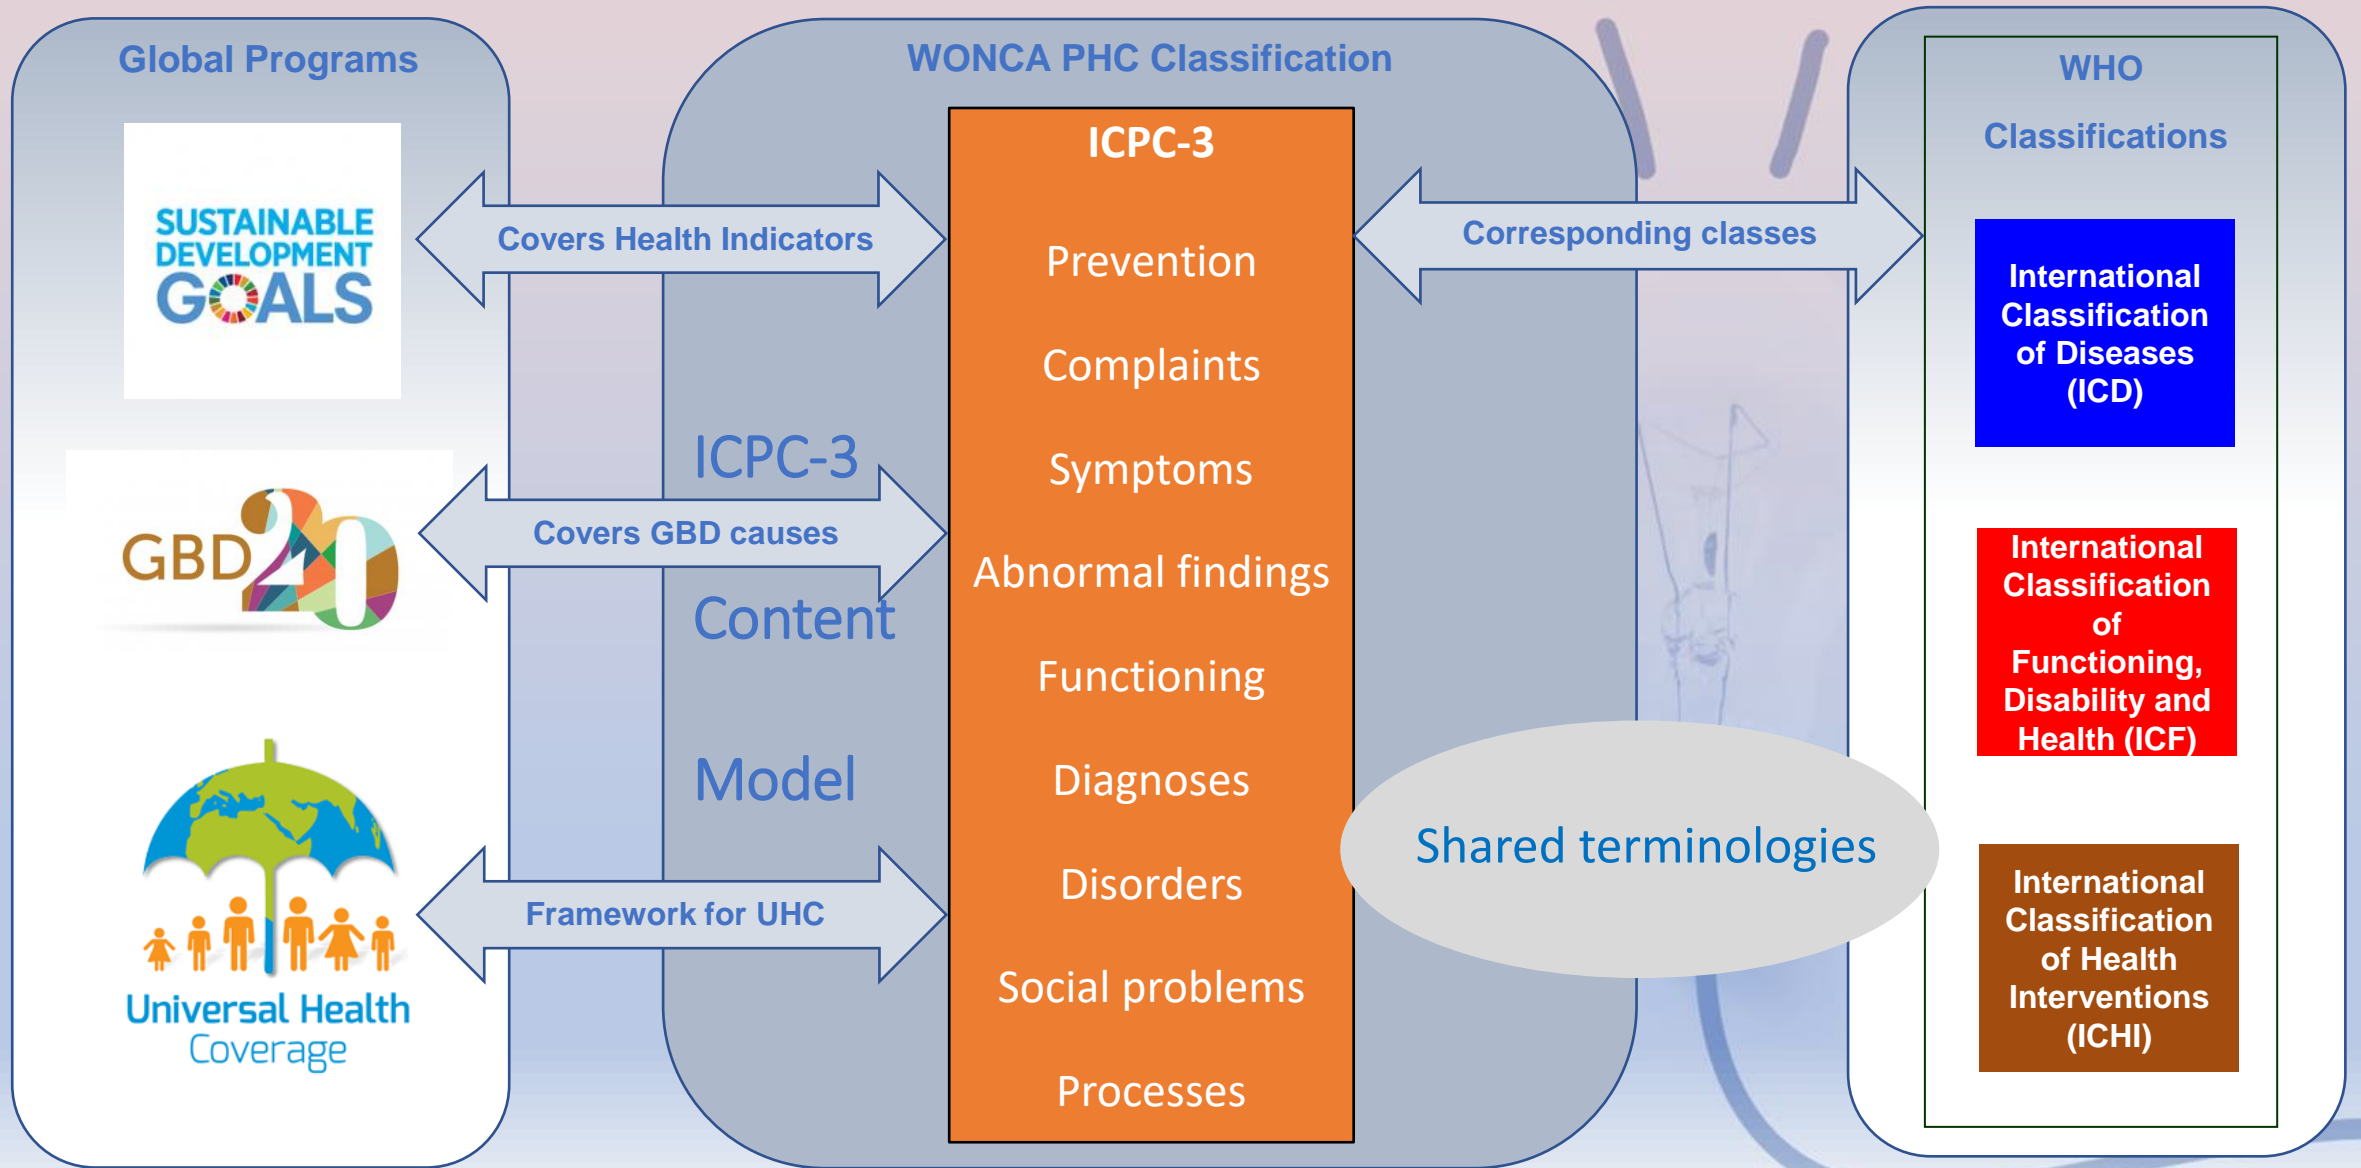

How?

Harmonisation within the Family of International Classifications

Support of Health in Global Programs

Snomed CT References

The selection for Snomed–CT references (N = 4893) is based on:

1. The existing cross references from SNOMED-CT to ICPC-2 developed and agreed in a collaboration between SNOMED International and WONCA International Classification Committee.
2. The frequency of the used search terms/concepts of the Dutch thesaurus with linkages between ICPC-2 and ICD-10.
3. Frequency of the search terms/concepts of the Belgium thesaurus with linkages between ICPC-2 and ICD-10.
4. Frequency of SNOMED codes in the UK from 1/7/2019 until 1/7/2020 (3.429.038.186 new coded items)

The ‘exactness’ of terms is represented in the order of the references to Snomed-CT.

Let's go to the browsers

<https://browser.icpc-3.info/>

(ICD-10: <https://icd.who.int/browse10/2019/en#/>)

(ICD-11: https://icd.who.int/ct11/icd11_mms/en/release)

SNOMED-CT: <https://browser.ihtsdotools.org/?>

Examples: fever, long COVID, shoulder syndrome, chronic pain syndrome
