

Developer Training Terminology Services

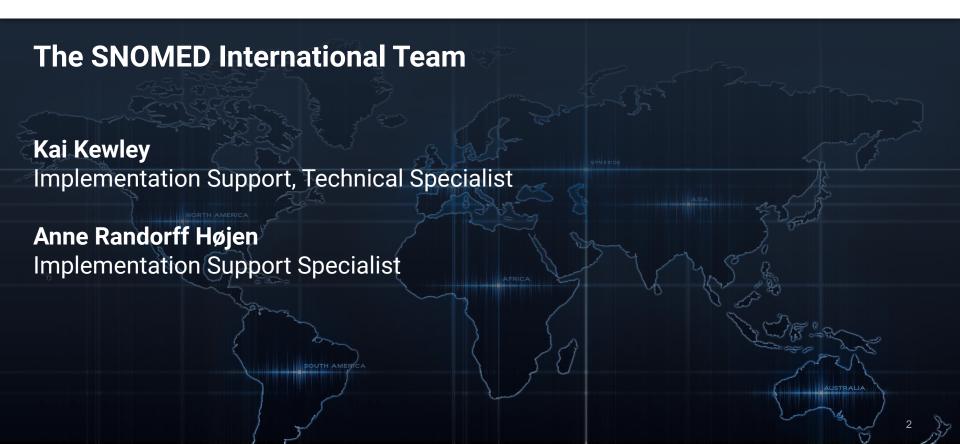

Germany - Online Wednesday, 10th May 2023

https://confluence.ihtsdotools .org/display/DEV/Germany

Welcome & Introductions

To better understand SNOMED CT,
how to deploy it easily in your local environments,
how to keep the terminology updated and
how to integrate it with your applications

Agenda - Part 1

Setting up a production-ready SNOMED CT enabled terminology server

- SNOMED CT in Germany
- Introduction to SNOMED CT
- Introduction to Snowstorm

Exercise: Snowstorm Setup and SNOMED Import

- Releases and Extensions
- Examples of use (browser, UI demo)
- Learn more

Agenda - Part 2

Using a SNOMED-enabled terminology server

- Components and derivatives
- Practical session (working with the FHIR API)
 - Search and display
 - Lookup Content in SNOMED subsets
 - Use Maps
- Analytics demo
- Practical session (working with the FHIR API)
 - Querying SNOMED CT using the Expression Constraint Language (ECL)

SNOMED CT in Germany

SNOMED CT

The world's most comprehensive multilingual clinical terminology

The global language of healthcare

A Brief History

Acquired by IHTSDO for the public good in 2007

2007

2002

First release of SNOMED CT (merge of SNOMED and Read Codes)

2017

IHTSDO adopted the trading name **SNOMED International**

Vision

SNOMED International By 2025, Clinical Terminologies will be used globally, which will result in better health and improved patient outcomes, supported by one language of health

Delivering

SNOMED CT

International: Delivering SNOMED CI

Who is involved now?

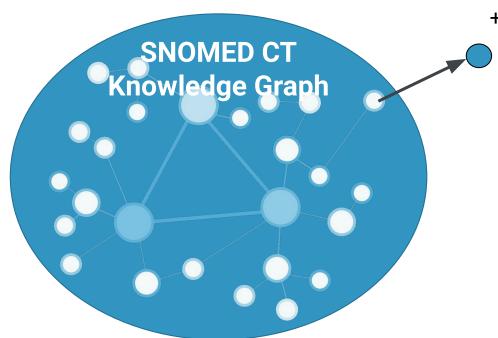

Andorra	Czech Republic	□ srael	Portugal	Thailand
Argentina	Denmark Denmark	Jamaica	Norway	Sweden
Armenia	El Salvador	J ordan	Poland	Switzerland
Australia	Estonia	Kazakhstan	Saudi Arabia	United Arab Emirates
Austria	H Finland	Lithuania	Singapore	United Kingdom
Belgium	Germany	Luxembourg	Slovakia	United States
Brunei	Hong Kong, China	Malaysia	Slovenia	Uruguay
Canada	Iceland	Malta	Republic of Indonesia	
Chile	■ India	Netherlands	Republic of Korea	SNOMED International
Cyprus	Ireland	New Zealand	Spain	47 Members

SNOMED CT - Organizational Perspective

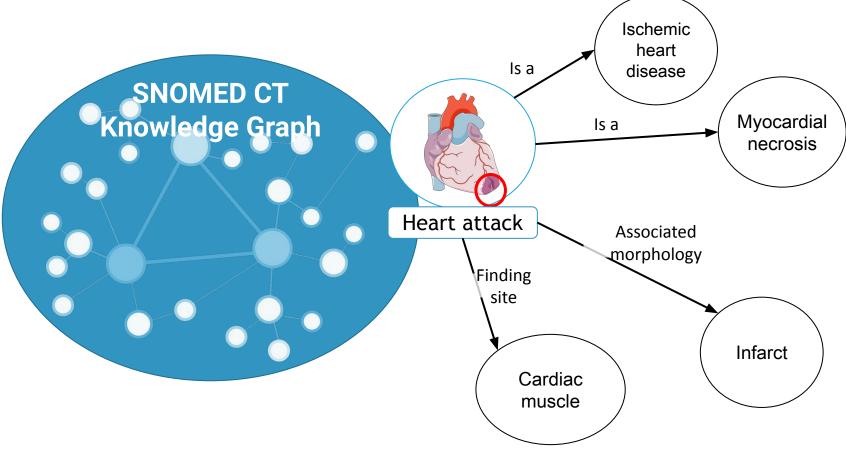

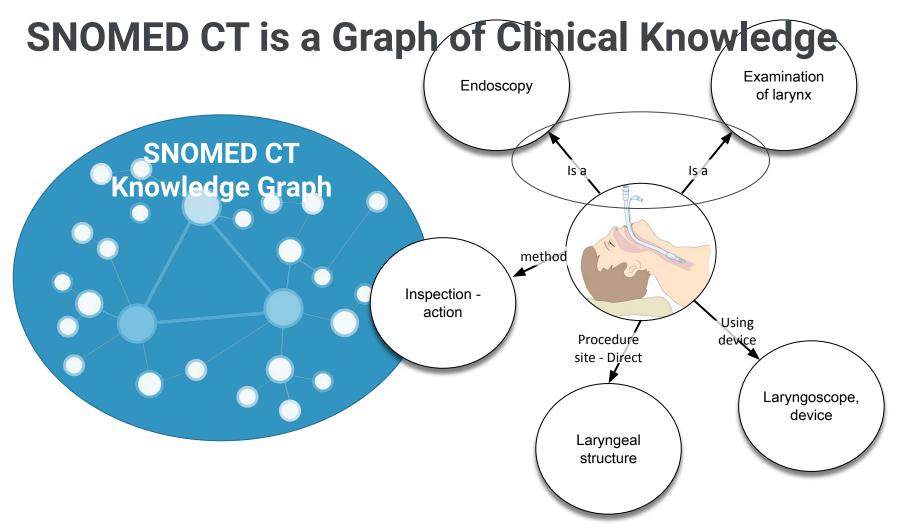

SNOMED CT is a Graph of Clinical Knowledge

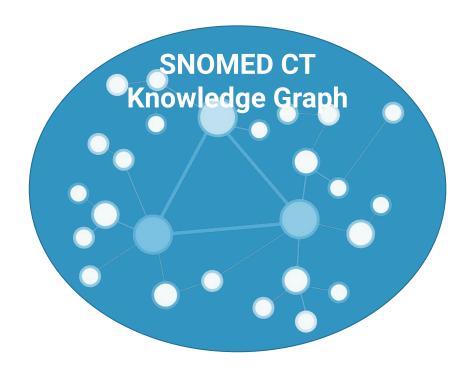

+350 unique clinical concepts linked together via a set of semantic relationships

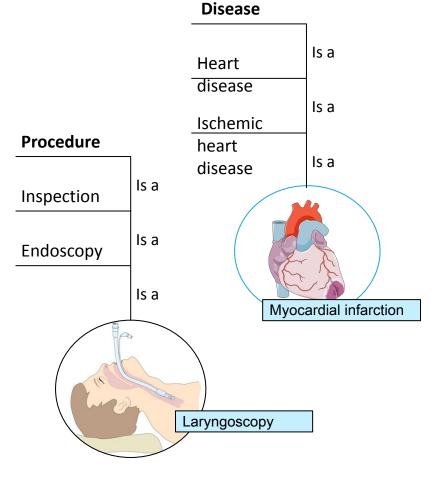

SNOMED CT is a Graph of Clinical Knowledge

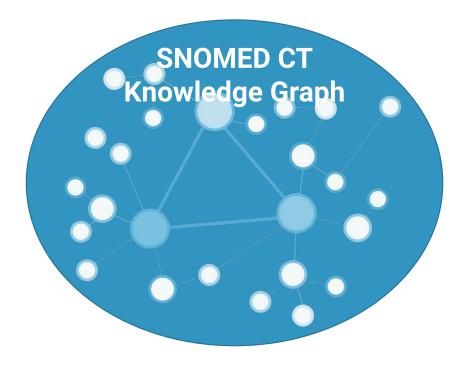

Hierarchies

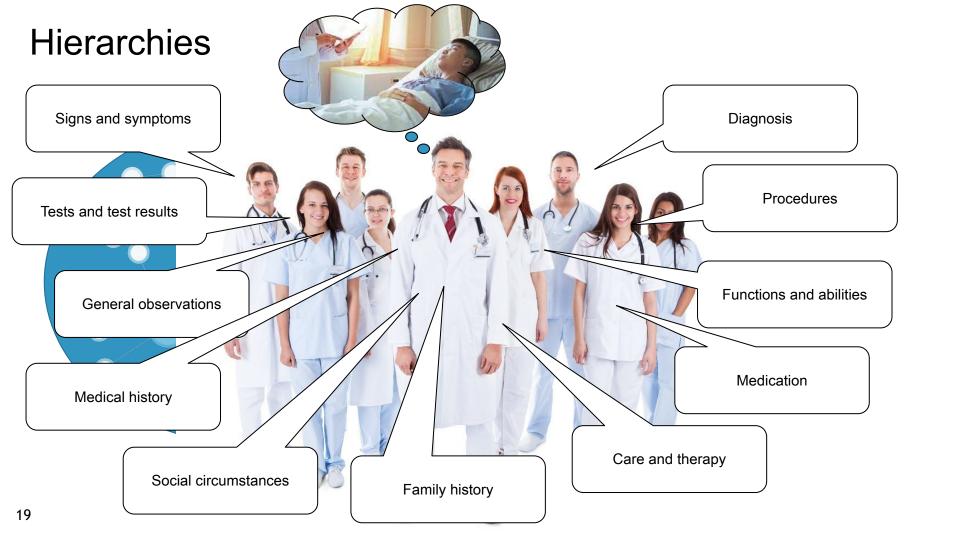

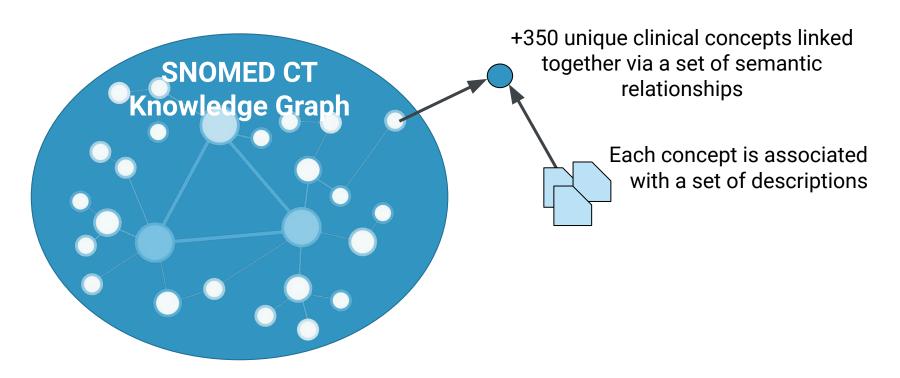

Hierarchies

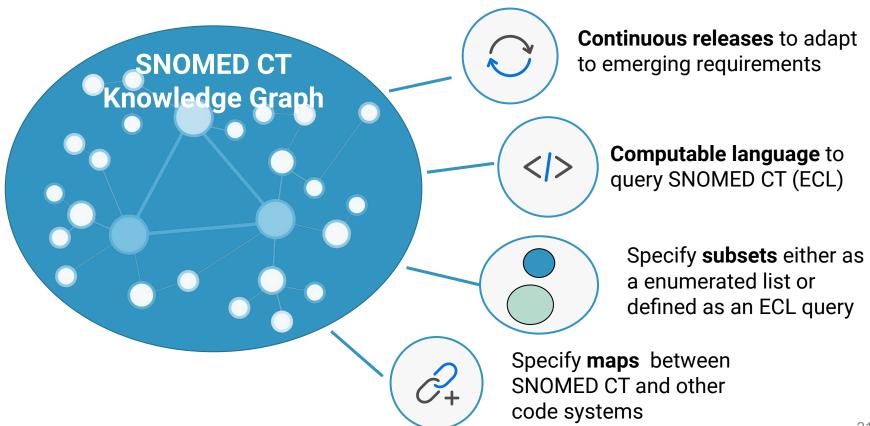

SNOMED CT is a Graph of Clinical Knowledge

SNOMED CT is a Graph of Clinical Knowledge

Snowstorm

Open Source

- https://github.com/IHTSDO/snowstorm
- Apache 2.0 license

Features

- Provides FHIR terminology services
- Cross platform, simple to install and run
- Support for the SNOMED ECL query language
- Version 8.1 will host multiple code systems (LOINC/ICD etc)
- Fast and horizontally scalable using Elasticsearch

Tools which leverage Snowstorm

- SNOMED International Authoring Platform
- SNOMED International Browser https://browser.ihtsdotools.org/

Snowstorm - what it's not.

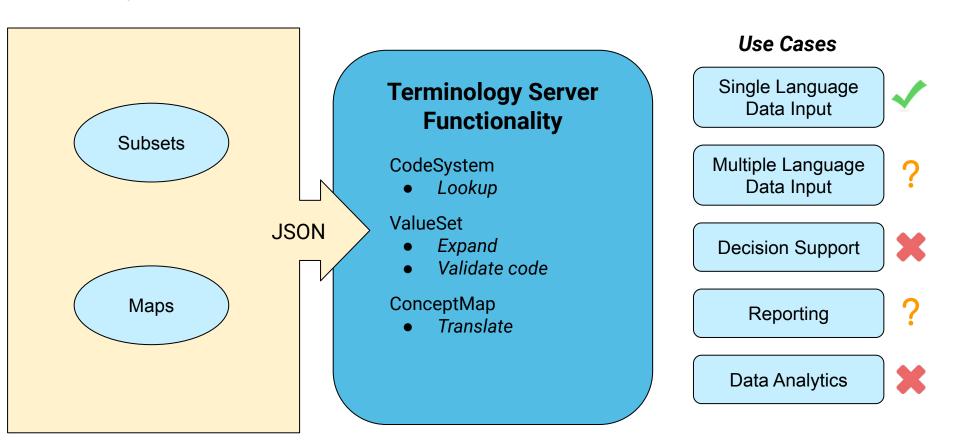

• SNOMED International is not able to provide a commercial support agreement

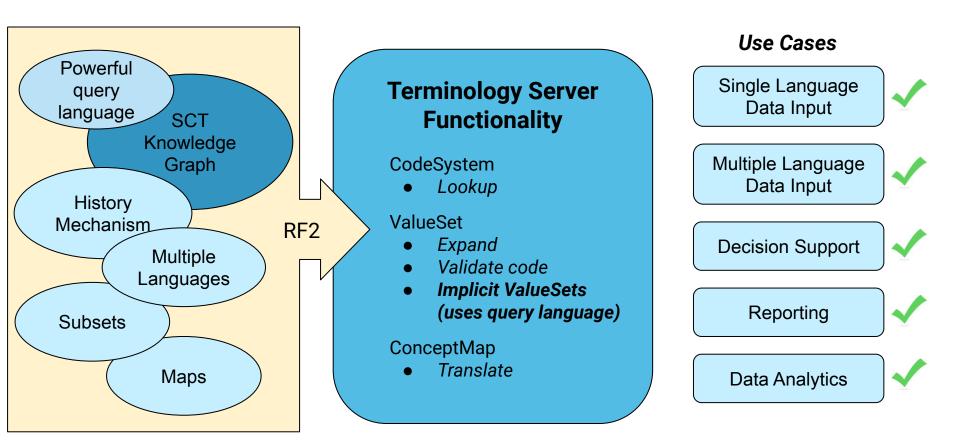

- SNOMED International is not able to host an international cloud service for use in production systems
 - o There is a public Snowstorm instance for reference and manual testing

Terminology Services with flat lists

Terminology Services with SNOMED CT

SNOMED CT Releases

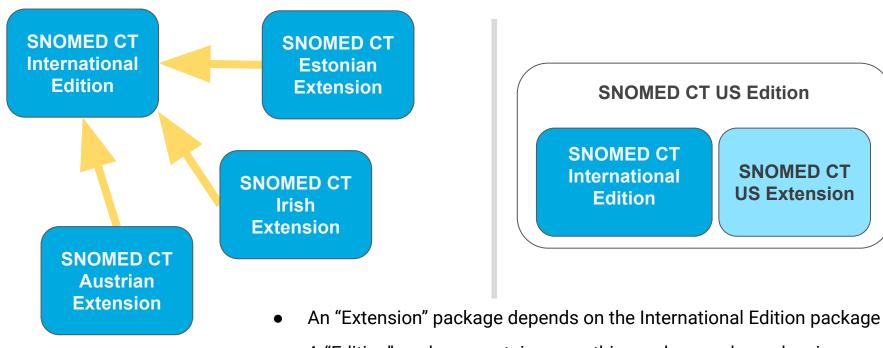

Package Format and Layout

- All SNOMED CT releases are distributed in the **RF2** format (Release Format 2). This is a set of TSV files compressed as a zip archive.
- Within a release package there are two directories:
 - Snapshot the current state of all components in that edition
 - Full the full history of every component in all releases of the edition

SNOMED CT Release Package Types

• A "Edition" package contains everything so has no dependencies. These are usually larger than 500MB.

Snowstorm Setup Exercise

- Using your Ubuntu servers we will:
 - Install Elasticsearch and Snowstorm
 - Load the International Edition (pause)
 - Load the Austrian Edition

http://snomed.org/dev-training

SNOMED CT Releases and Extensions

Within a Terminology Server

Snowstorm has a branching mechanism allowing us to:

- Store and access the SNOMED International Edition
- Store and access one or many SNOMED Extensions on top
- Import new releases as they become available
- Retain access to previous SNOMED releases

Snowstorm - Branches

Code Systems and Branches

- Each Code System has a working-branch, containing its SNOMED content, and a version branch, for each release
- The International Edition is stored on a working-branch called MAIN, this is the root of the repository
- Extension's working-branches exist under MAIN and use a short name matching their Code System
- Examples of Edition/Extension branches:
 - MAIN (The root branch containing the International Edition)
 - MAIN/SNOMEDCT-AT (The Austrian Extension)
 - MAIN/SNOMEDCT-ES (The Spanish Translation Extension)

Snowstorm - Extension Setup

When Snowstorm is started the **SNOMEDCT** Code System and its working-branch MAIN is created automatically ready for the terminology content to be imported.

Setting up an extension is a three step process:

- Import the **Snapshot** of the International Edition onto **MAIN**
- 2. Create the extension Code System "SNOMEDCT-AT"
- Import the **Snapshot** of the additional extension content onto the extension branch MAIN/SNOMEDCT-AT

Snowstorm - Extension Upgrade

When a new SNOMED CT release becomes available you can import that too. You will still have access to previously imported content.

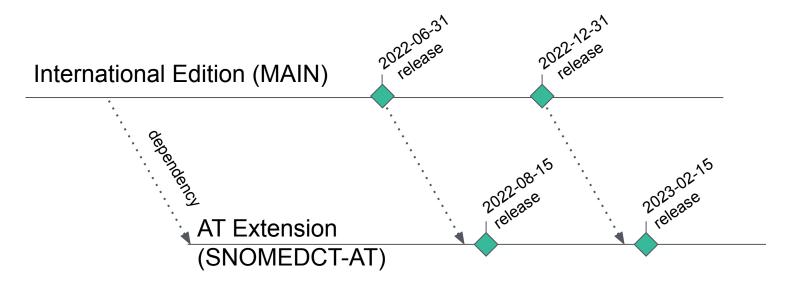

Upgrading an extension is a three step process:

- 1. Import the Snapshot of the new International Edition release into MAIN
- 2. Upgrade the Austrian Code System to depend on the new Int. release
- Import the Snapshot of the new extension release onto the Austrian extension branch

Snowstorm - Version Control

- The content of SNOMED releases and extensions are managed like source code repository.
- The content of each International Edition release is imported to MAIN, then the Extension branch is rebased/upgraded and new Extension content imported.

Snowstorm in Production

SNOMED International

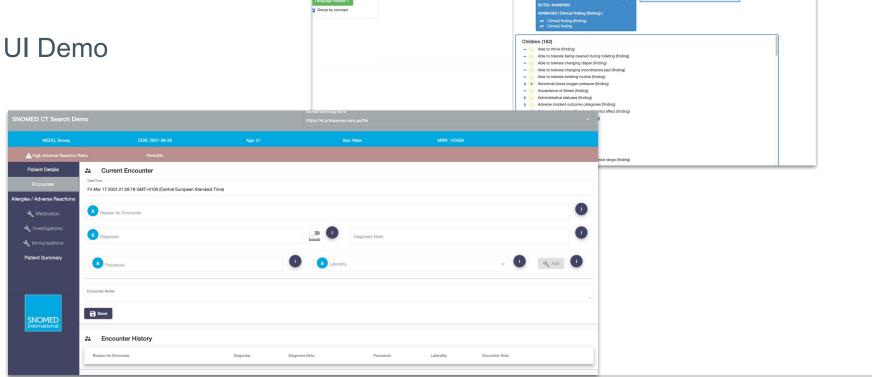

Points to consider:

- What security measures are appropriate?
 - SSL, Firewall
 - Read-Only Mode
- Is redundancy needed?
 - Consider a cluster of two or more instances
 - Disaster recovery options (script + backup/restore?)
- Monitoring
 - Snowstorm + Elasticsearch
- How much traffic do you need to support?
 - Consider horizontal scaling

Feedback About ▼ ■ ▼

NOMED

Best-practice Search (If you are an end-user)

- Text-based (minimize scrolling)
 - Group by concept
 - Multiple prefix any order
 - Sort results rationally
 - Frequency of use
 - Shortest matching term first
- Display pt in selected dialect (part of configuration)
- Potentially allow the display of other accepted terms
- Preconfigured constraints
 - Subtype hierarchy
 - Expression constraint (Set determined by rule)
 - Value set (subset)

Application Demo

http://snomed.org/ui

Driven by implicit ValueSets + text filter
