# Data Analytics with SNOMED CT

## *SNOMED CT in Germany*

March 19th, 2024

*Anne Højen and Kai Kewley*  
*SNOMED International*

[snomed.org](https://snomed.org)

[@snomedct](https://twitter.com/snomedct)

[linkedin.com/company/ihtsdo/](https://linkedin.com/company/ihtsdo/)

# Outline

(Friday)  
March 24

- **Introduction**
  - Clinical data analytics
  - Meaning-based retrieval with SNOMED CT
- **Analytics scenarios**
  - Population health monitoring
  - Designing preventative measures
  - Assessing treatments
- **Interpreting the Results**

# Introduction to Data Analytics and Meaning-based Data Retrieval

[snomed.org](http://snomed.org)

[@snomedct](https://twitter.com/snomedct)

# Data Analytics

“The discovery and communication of meaningful patterns in data”

# Data Analytics

**Population health monitoring**  
*What are the trends?*

Patient care and treatment

Population health

Research

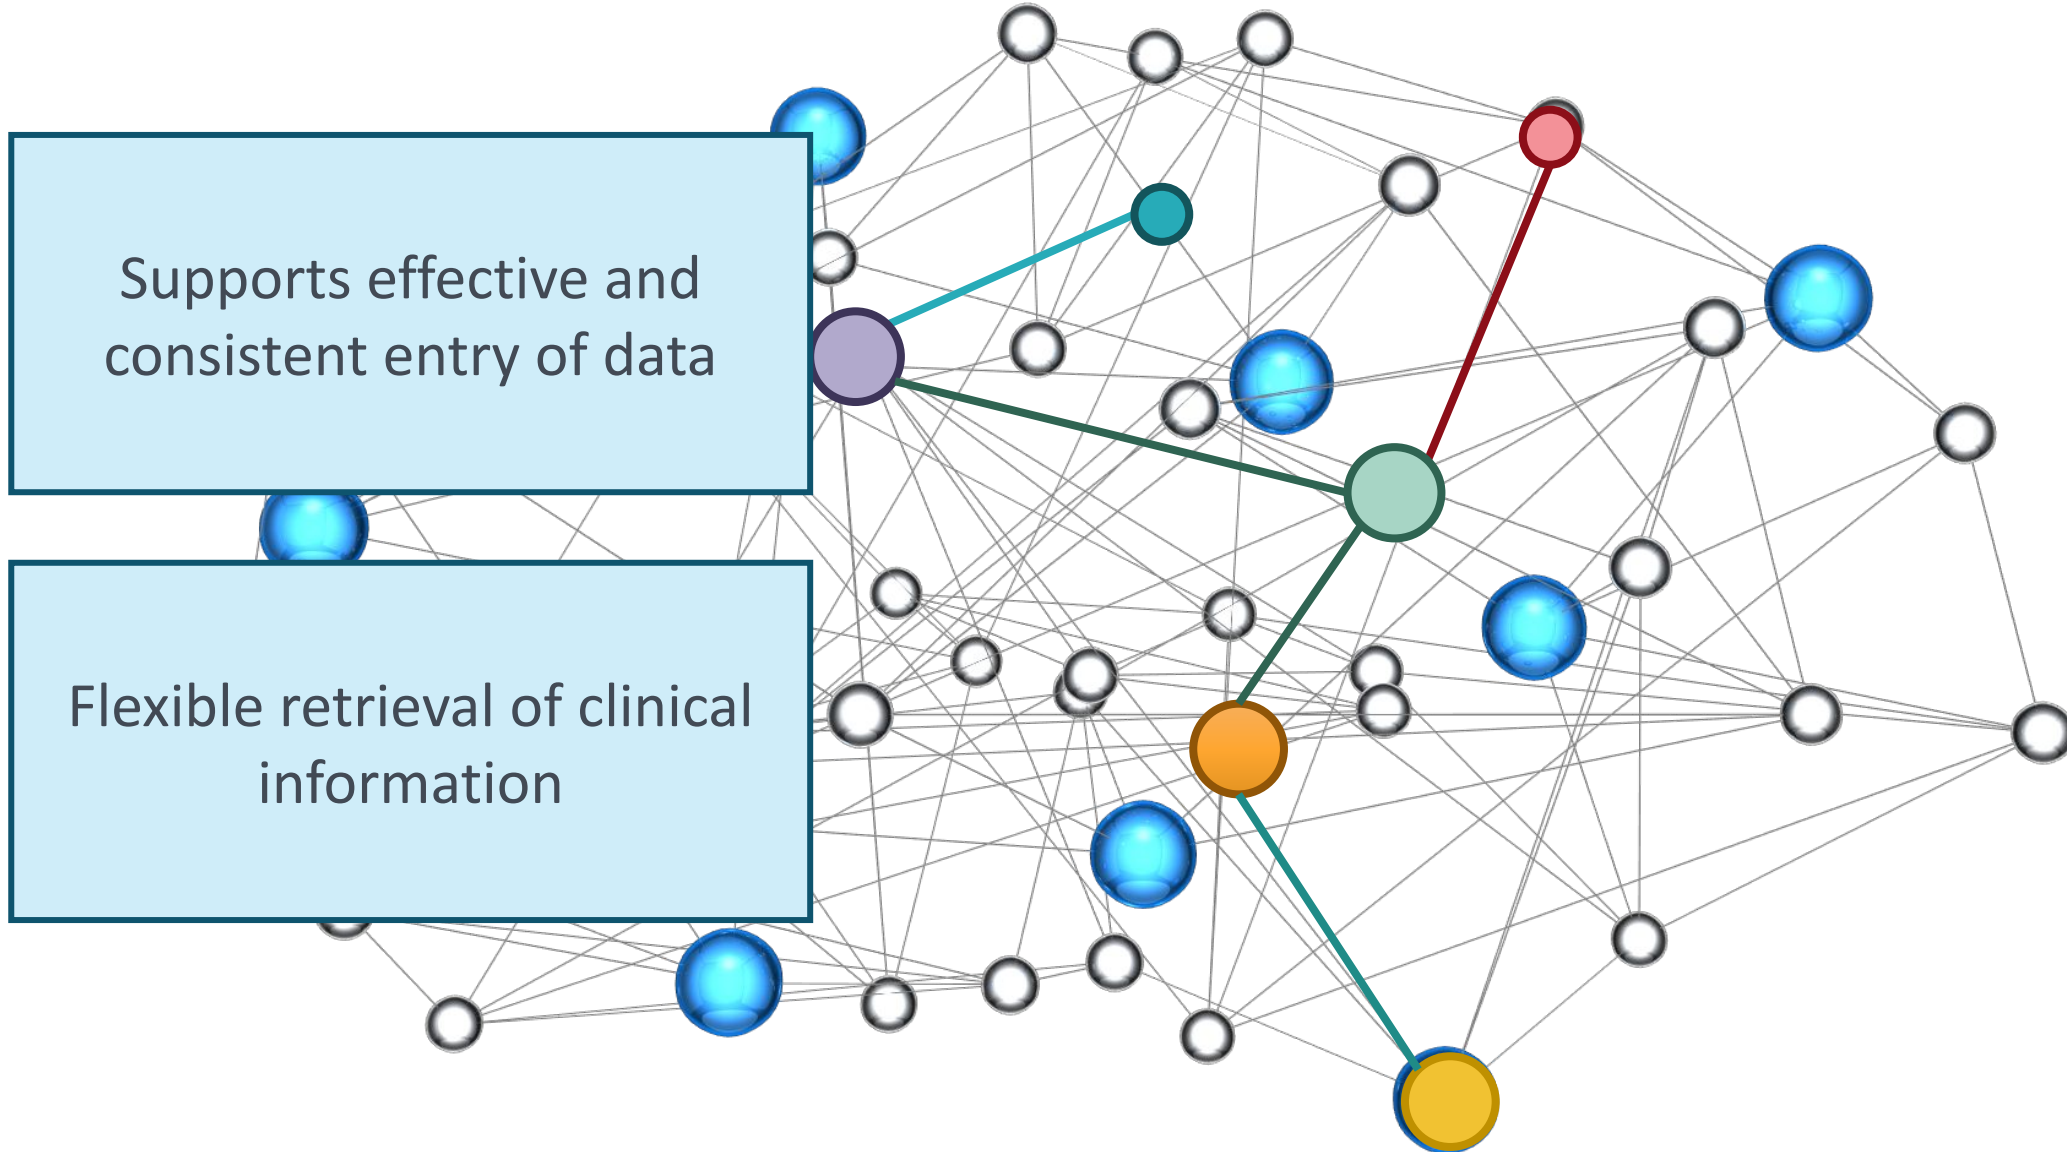

**Assessing treatments**  
*What will happen to me?*

**Improving the quality and efficiency of care**  
*What are the causal effects?*

## ... A Semantic Network of Clinical Meanings

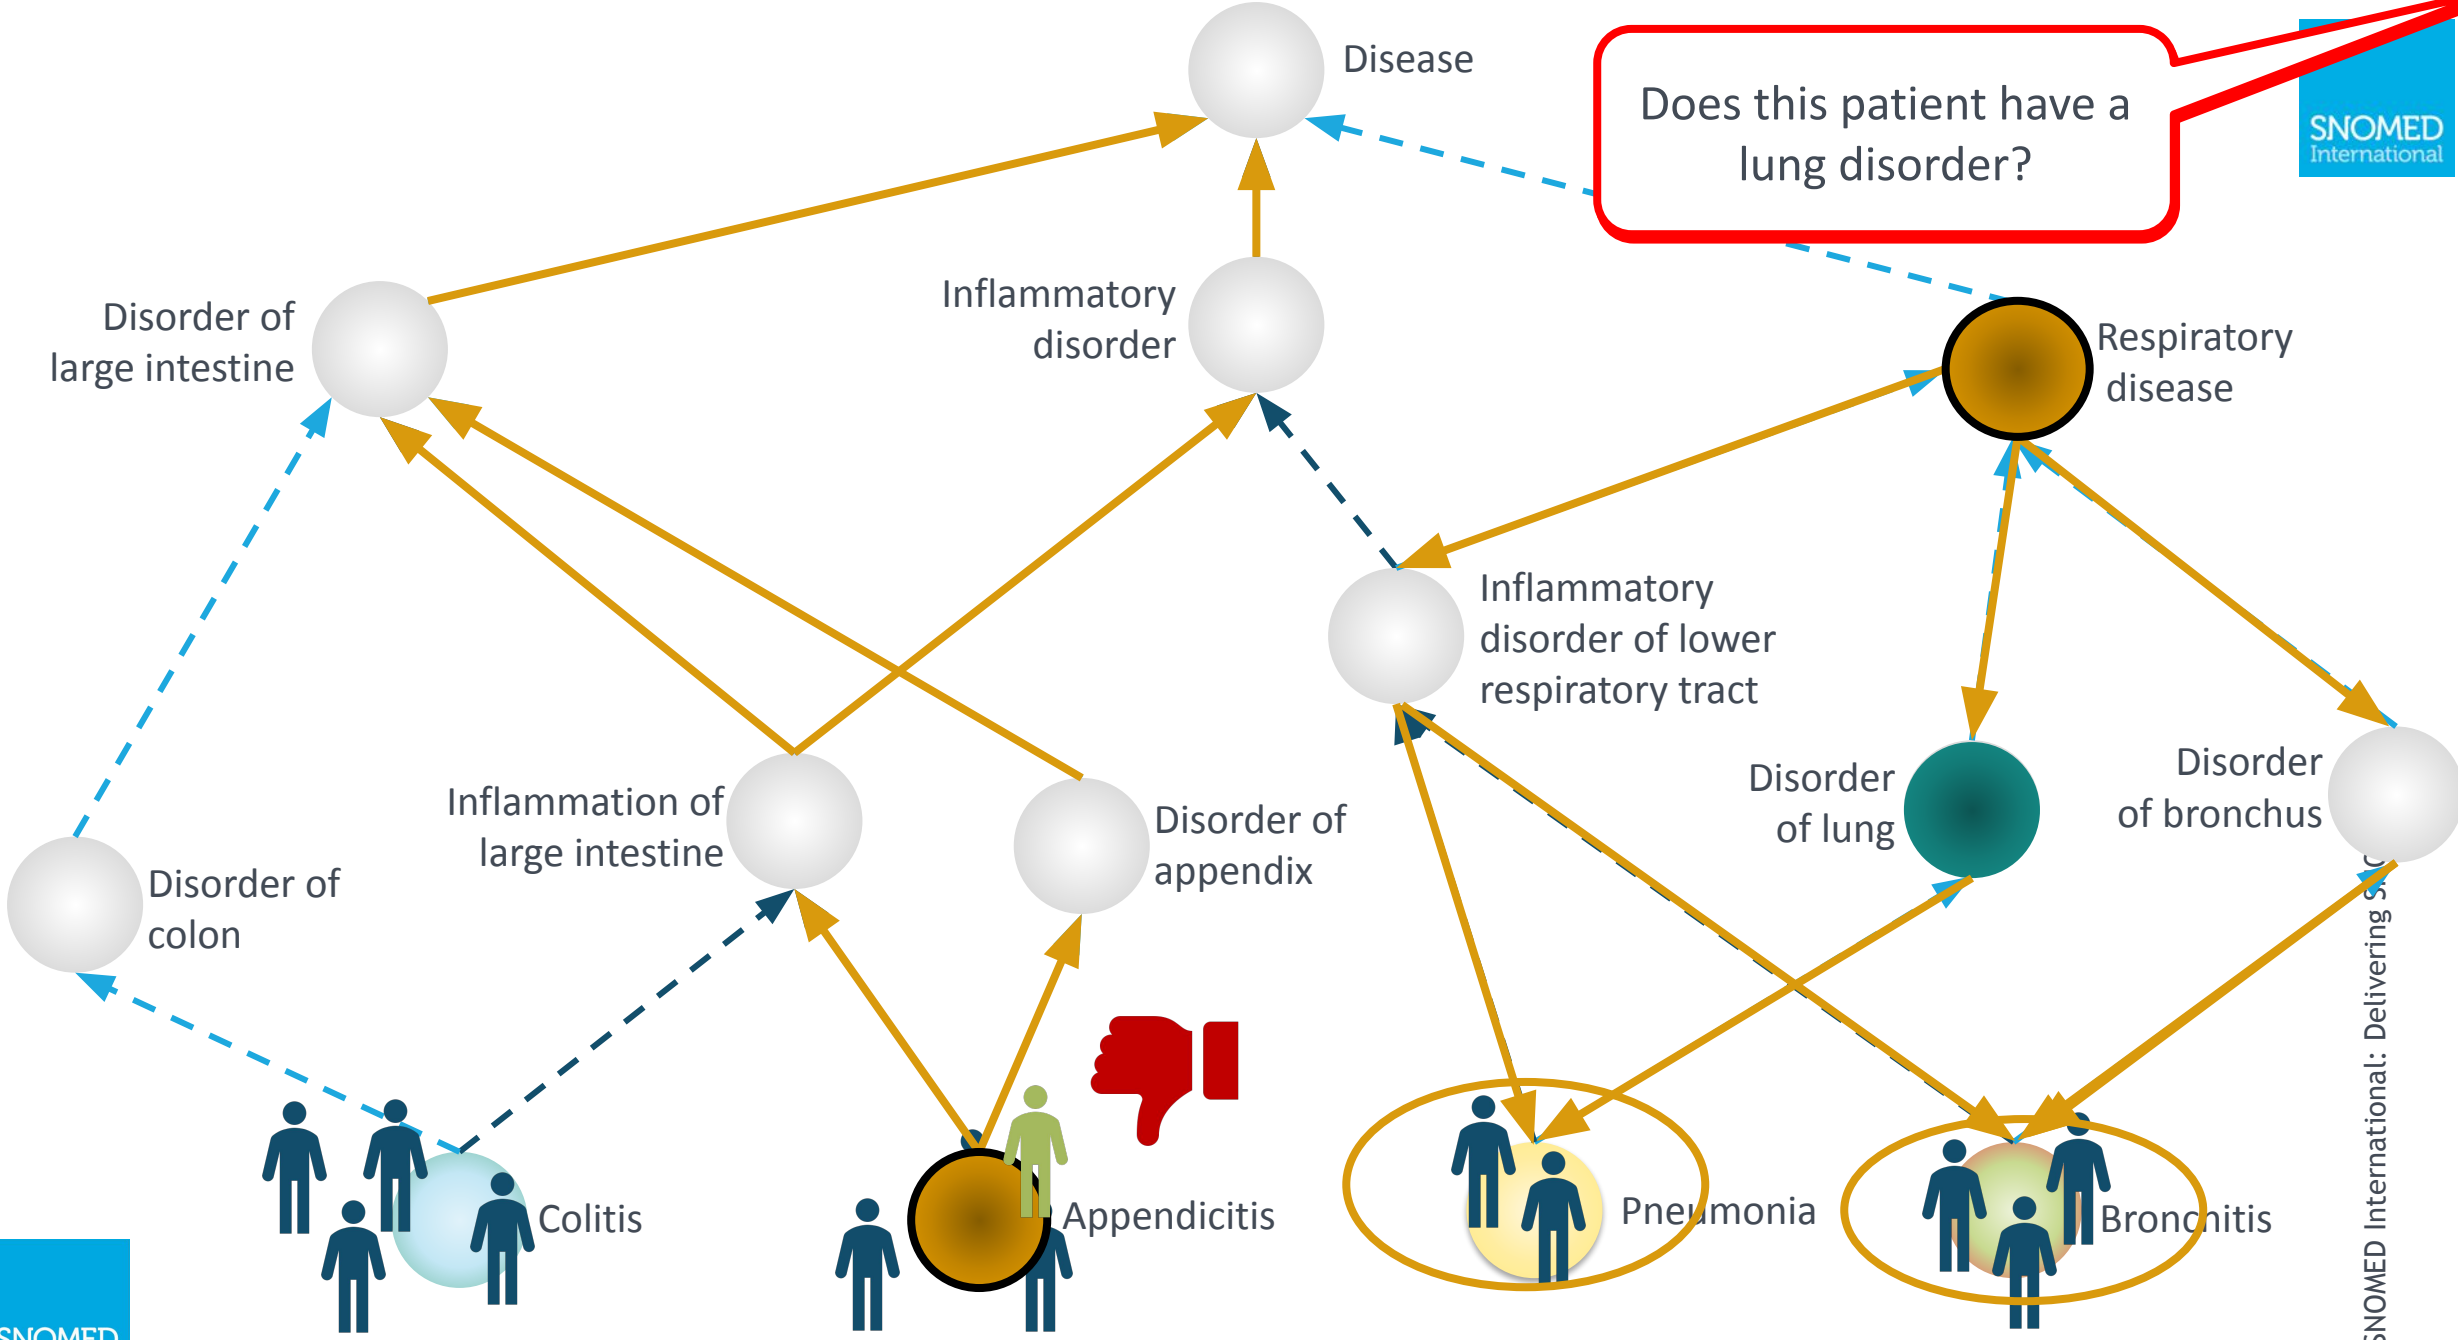

# Inflammatory morphology

*Associated morphology relationship*

*Finding site relationship*

*Associated morphology relationship*

People with a disorder located in the **colon** structure?

Associated morphology relationship

Finding site relationship

Associated morphology relationship

Inflammatory morphology

Fibrosis

Abscess

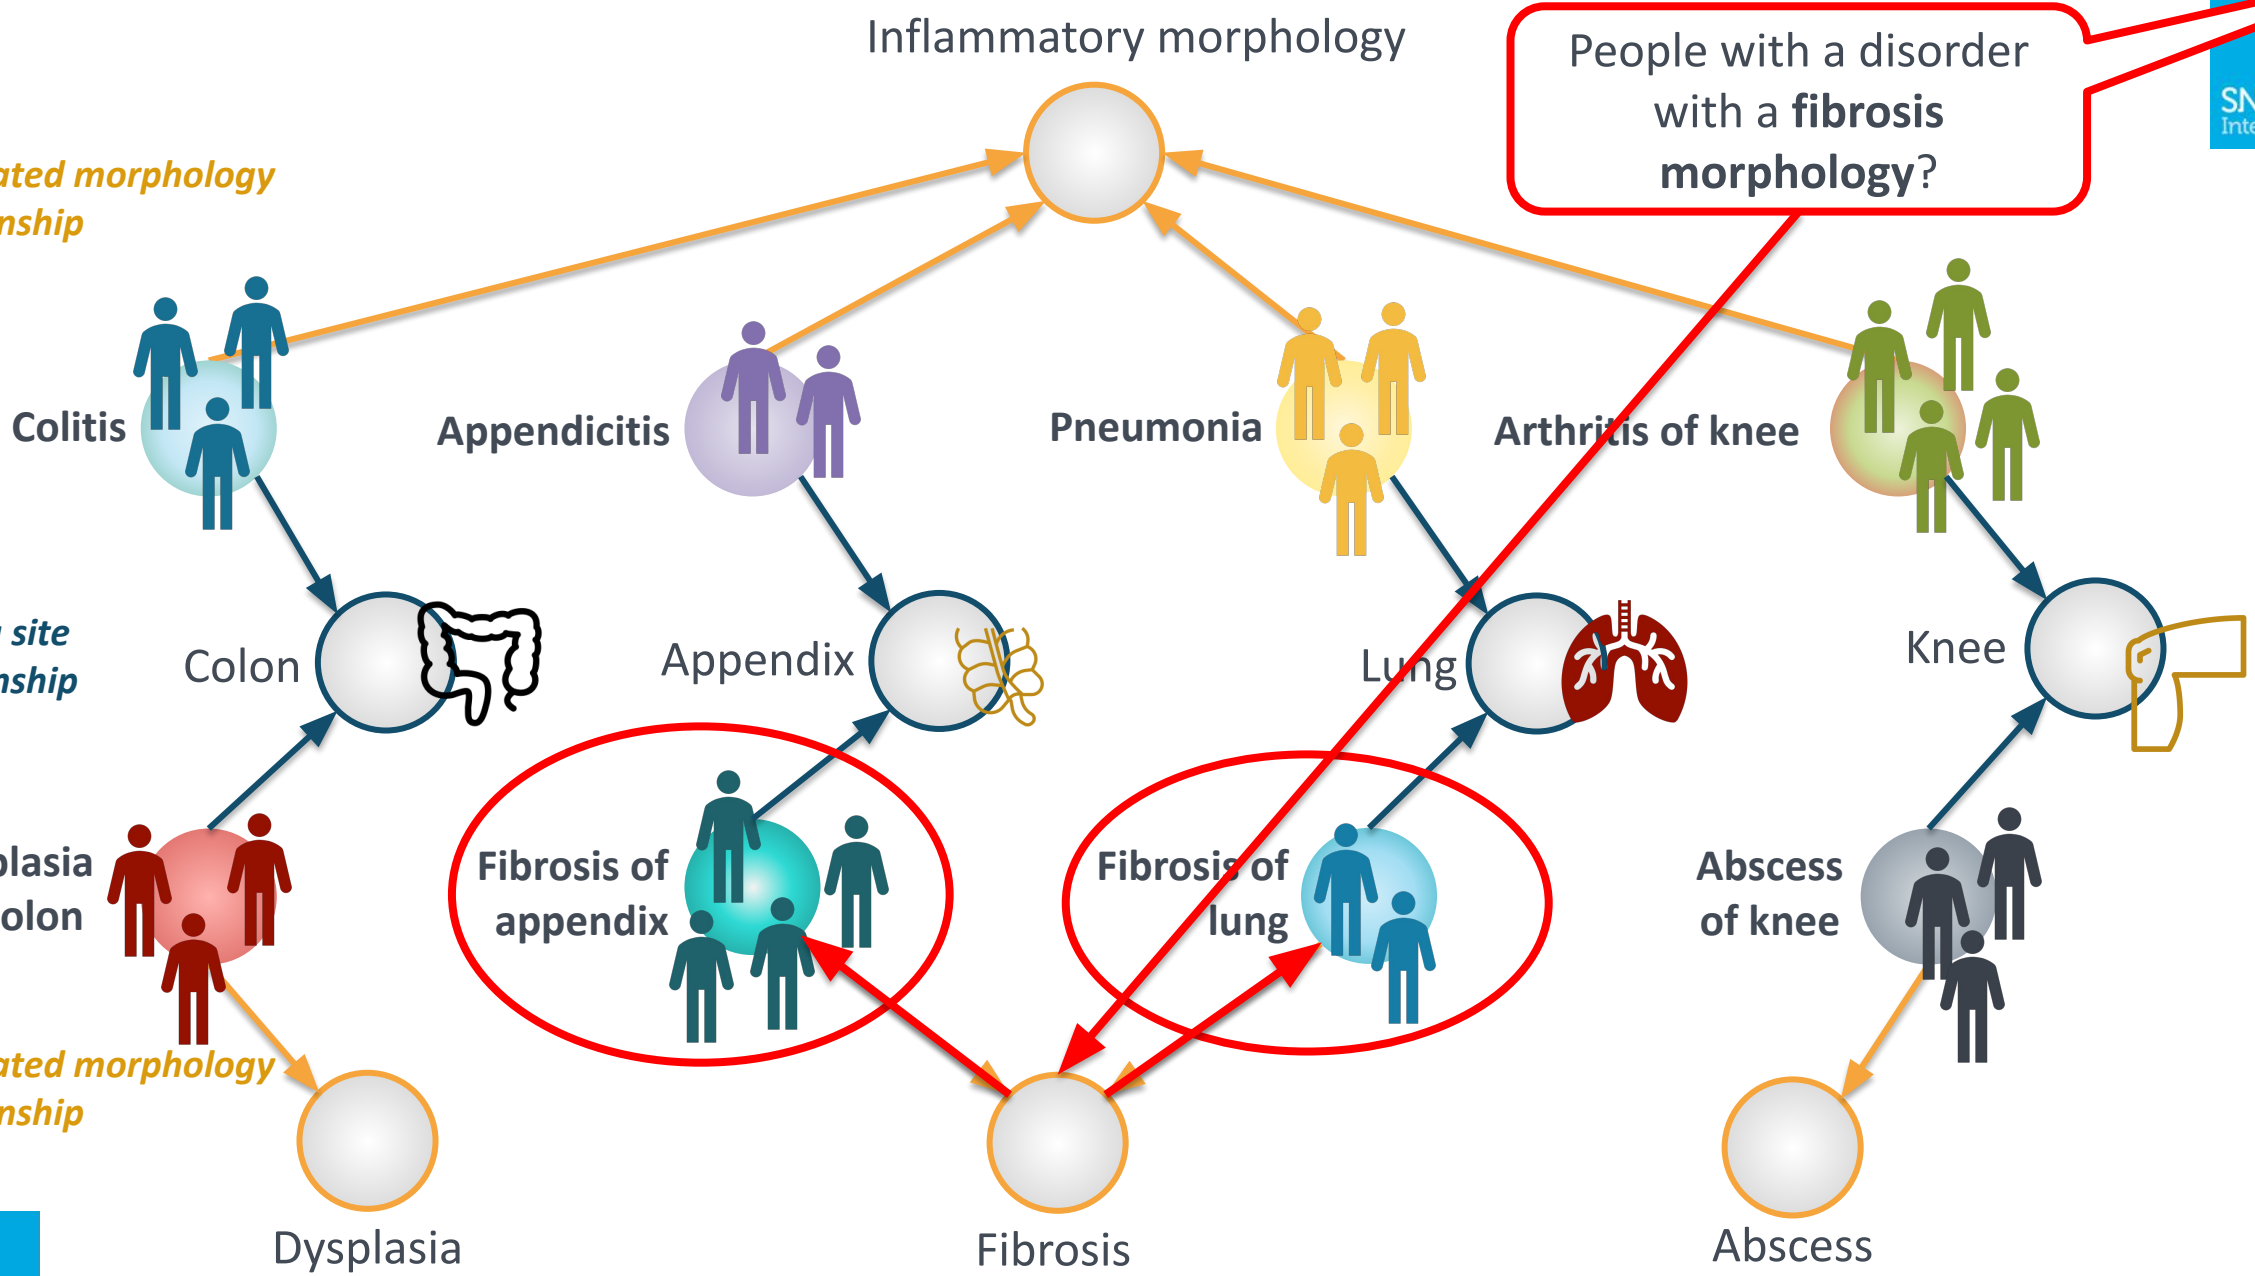

Dysplasia

*Associated morphology relationship*

People with a disorder with a **fibrosis morphology**?

*Finding site relationship*

*Associated morphology relationship*

## Question

People with a **respiratory disease**?

People with a disorder located in the **colon structure**?

People with a disorder with a **fibrosis morphology**?

## What concepts

All concepts that are subtypes of the concept 'respiratory disease'

All concepts that represent a disease with a finding site of 'colon structure'

All concepts that represent a disease with a morphology of 'fibrosis'

## Expression constraint language

## Query

```
<< 50043002 |Respiratory disease|
```

```
< 64572001 |Disease| :  
363698007 |Finding site| =  
<< 71854001 |Colon structure|
```

```
< 64572001 |Disease| :  
116676008 |Associated morphology| =  
<< 112674009 |Fibrosis|
```

# Population Health Monitoring

[snomed.org](http://snomed.org)

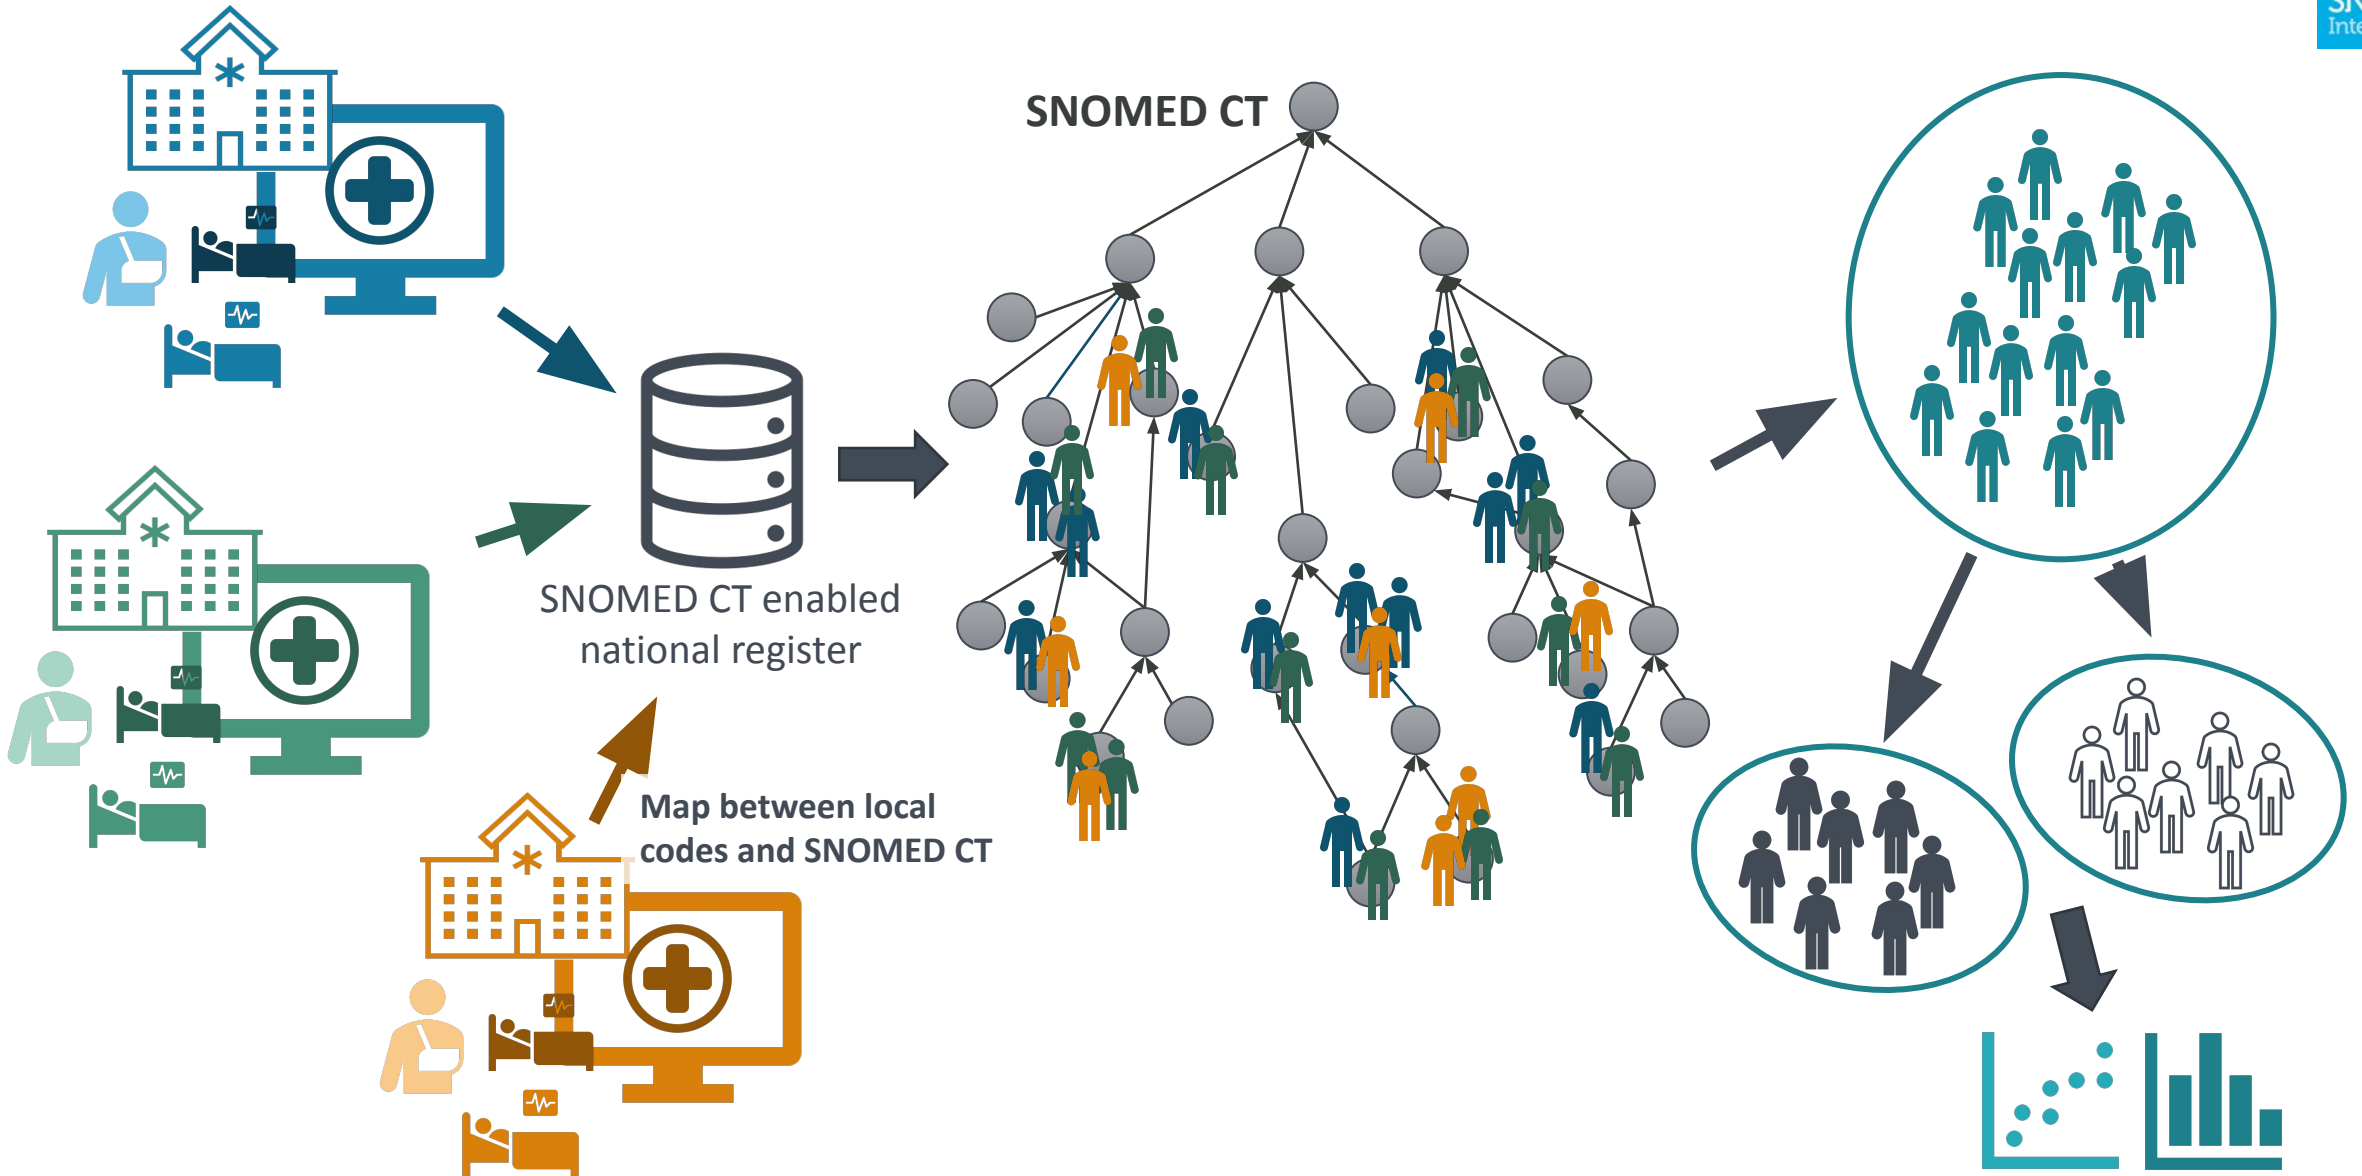

[@snomedct](https://twitter.com/snomedct)

[linkedin.com/company/ihtsdo/](https://linkedin.com/company/ihtsdo/)

Point of Care

# Data Analytics - Scenario 1

Population health

Population health monitoring  
*What are the trends?*

# Data Analytics - Scenario 1

Summarize and aggregate  
health-related information

Identify health trends and  
patterns across a population

Monitor the incidence and  
prevalence of diseases

Monitor effect of national  
programmes and initiatives

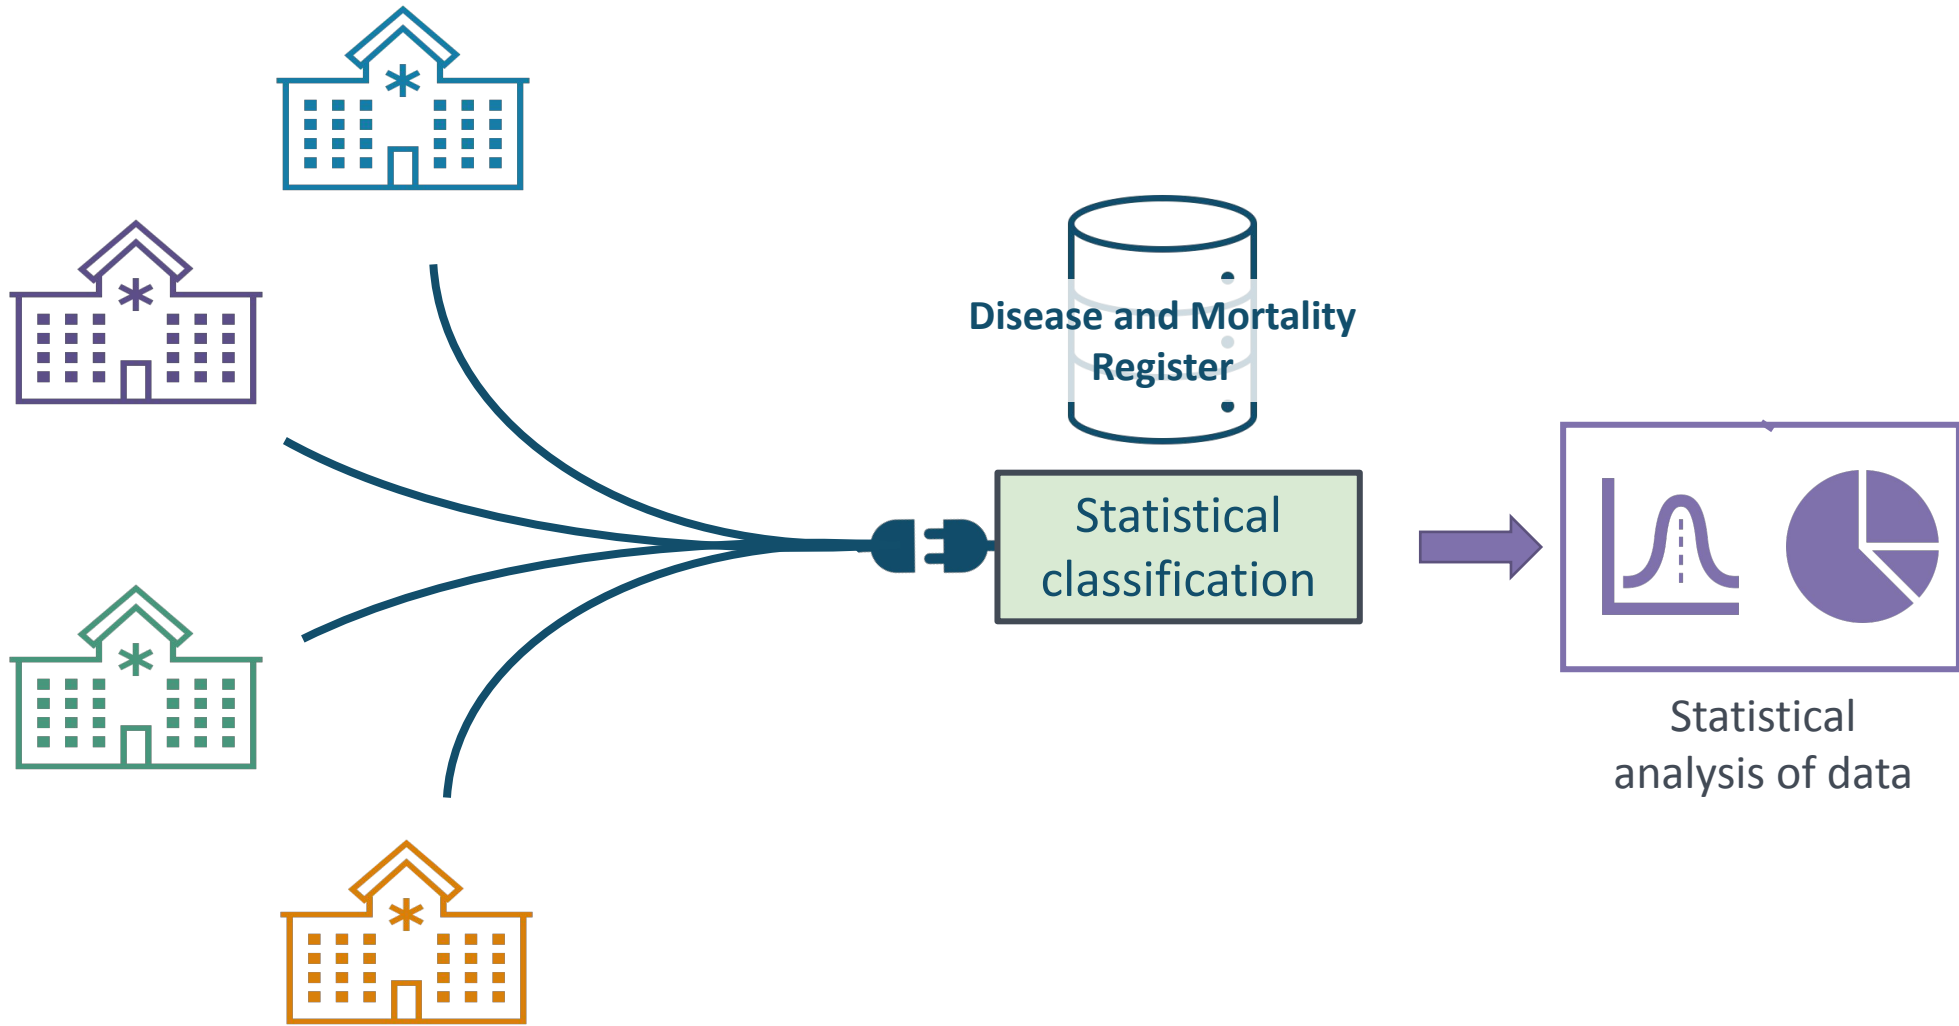

Balance and prioritize  
healthcare related costs

# Demonstration

Use a synthetic data set inspired by Danish National Statistics for the **incidence rate** of selected disorders

Small 1 million person population  
for demo

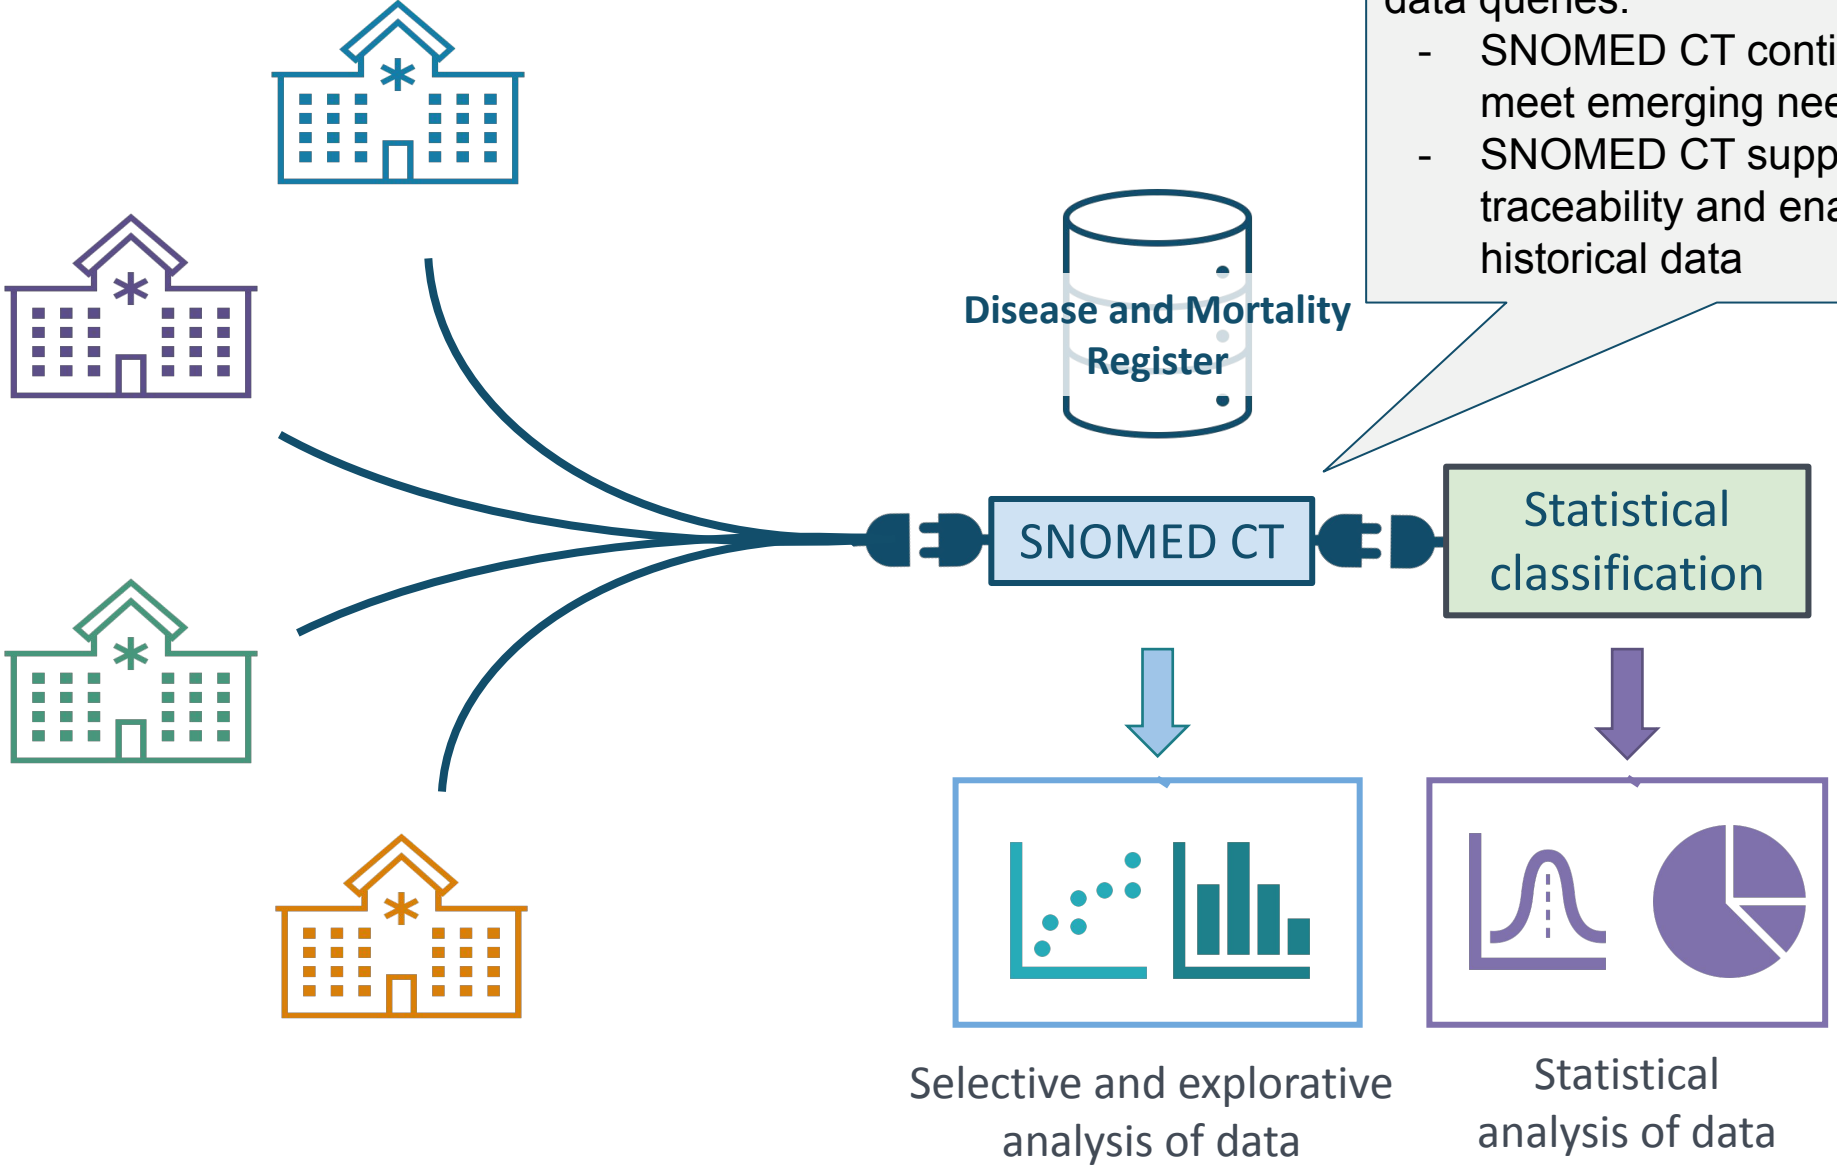

Using SNOMED CT as the core terminology is beneficial for longitudinal data queries:

- SNOMED CT continuously evolve to meet emerging needs
- SNOMED CT supports full traceability and enables queries over historical data

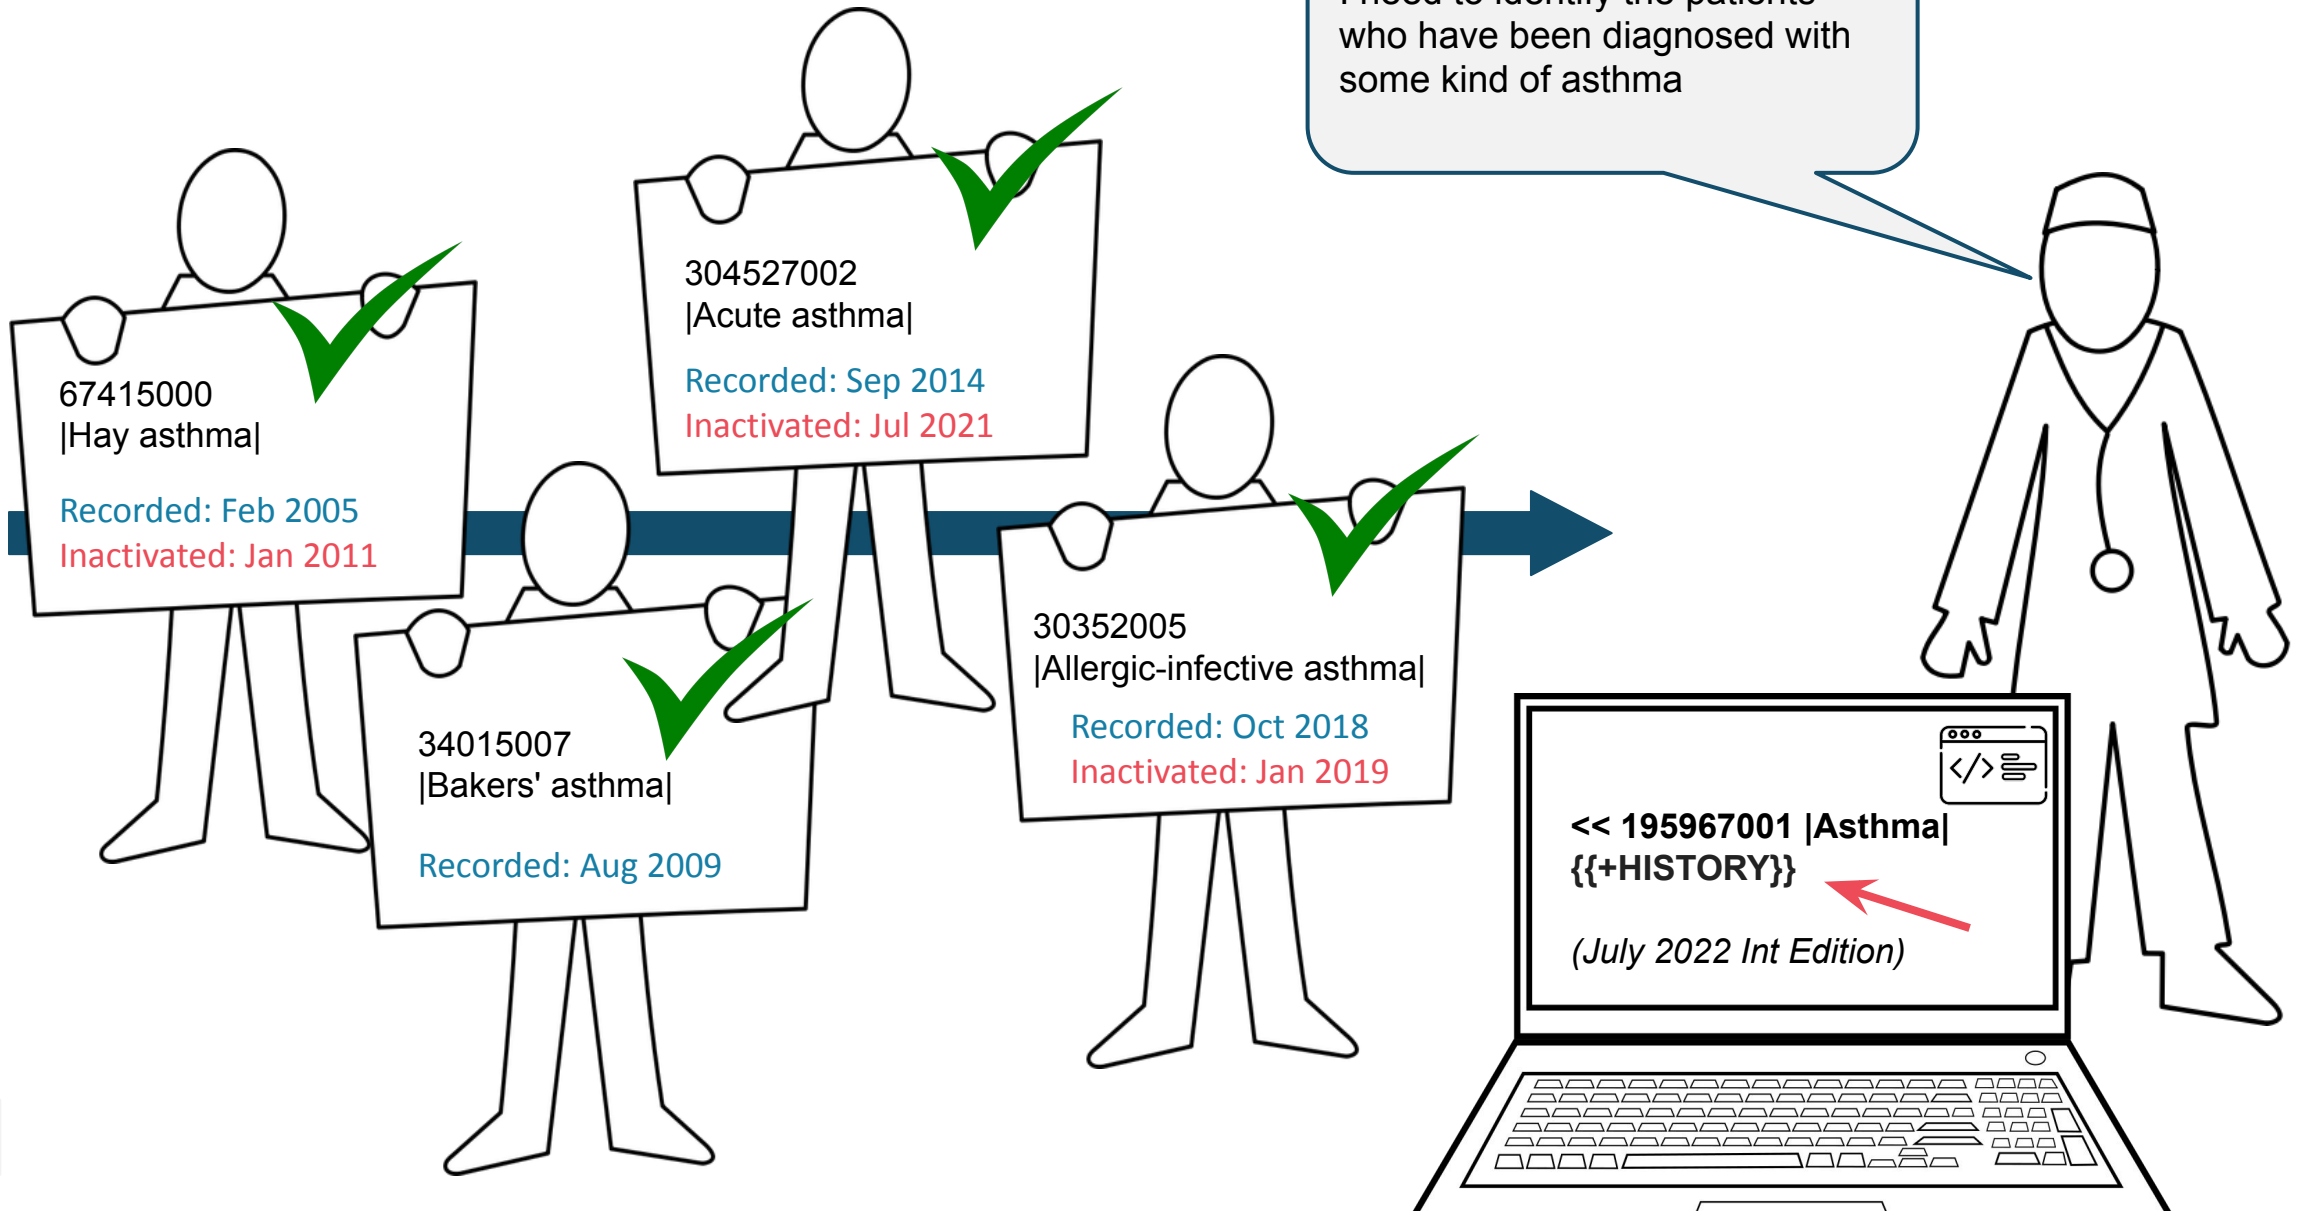

# Querying Historical data (ECL)

I need to identify the patients who have been diagnosed with some kind of asthma

# Querying Historical data (ECL)

I need to identify the patients who have been diagnosed with some kind of asthma

# History Supplements (ECL v2.0)

## Parents

No parents

Allergic-infective asthma  
(disorder)

SCTID: 30352005

30352005 | Allergic-infective asthma (disorder) |

*en* Allergic-infective asthma (disorder)

*en* Allergic-infective asthma

No attributes

*Why are concepts inactivated?*

Inactivations are required to ...  
Correct errors and keep pace with  
changing clinical knowledge

Important to retain access to  
inactivated content to support  
historical records

## Children

No children

# Demonstration

# Data Analytics - Scenario 3

## Assessing treatments

*How effective is each treatment option?*

# Data Analytics - Scenario 3

## Patient cohort

BRCA1 gene mutation

Increased risk of breast cancer

## Treatment

Drug prevention available

Risk of severe side effects

## Question

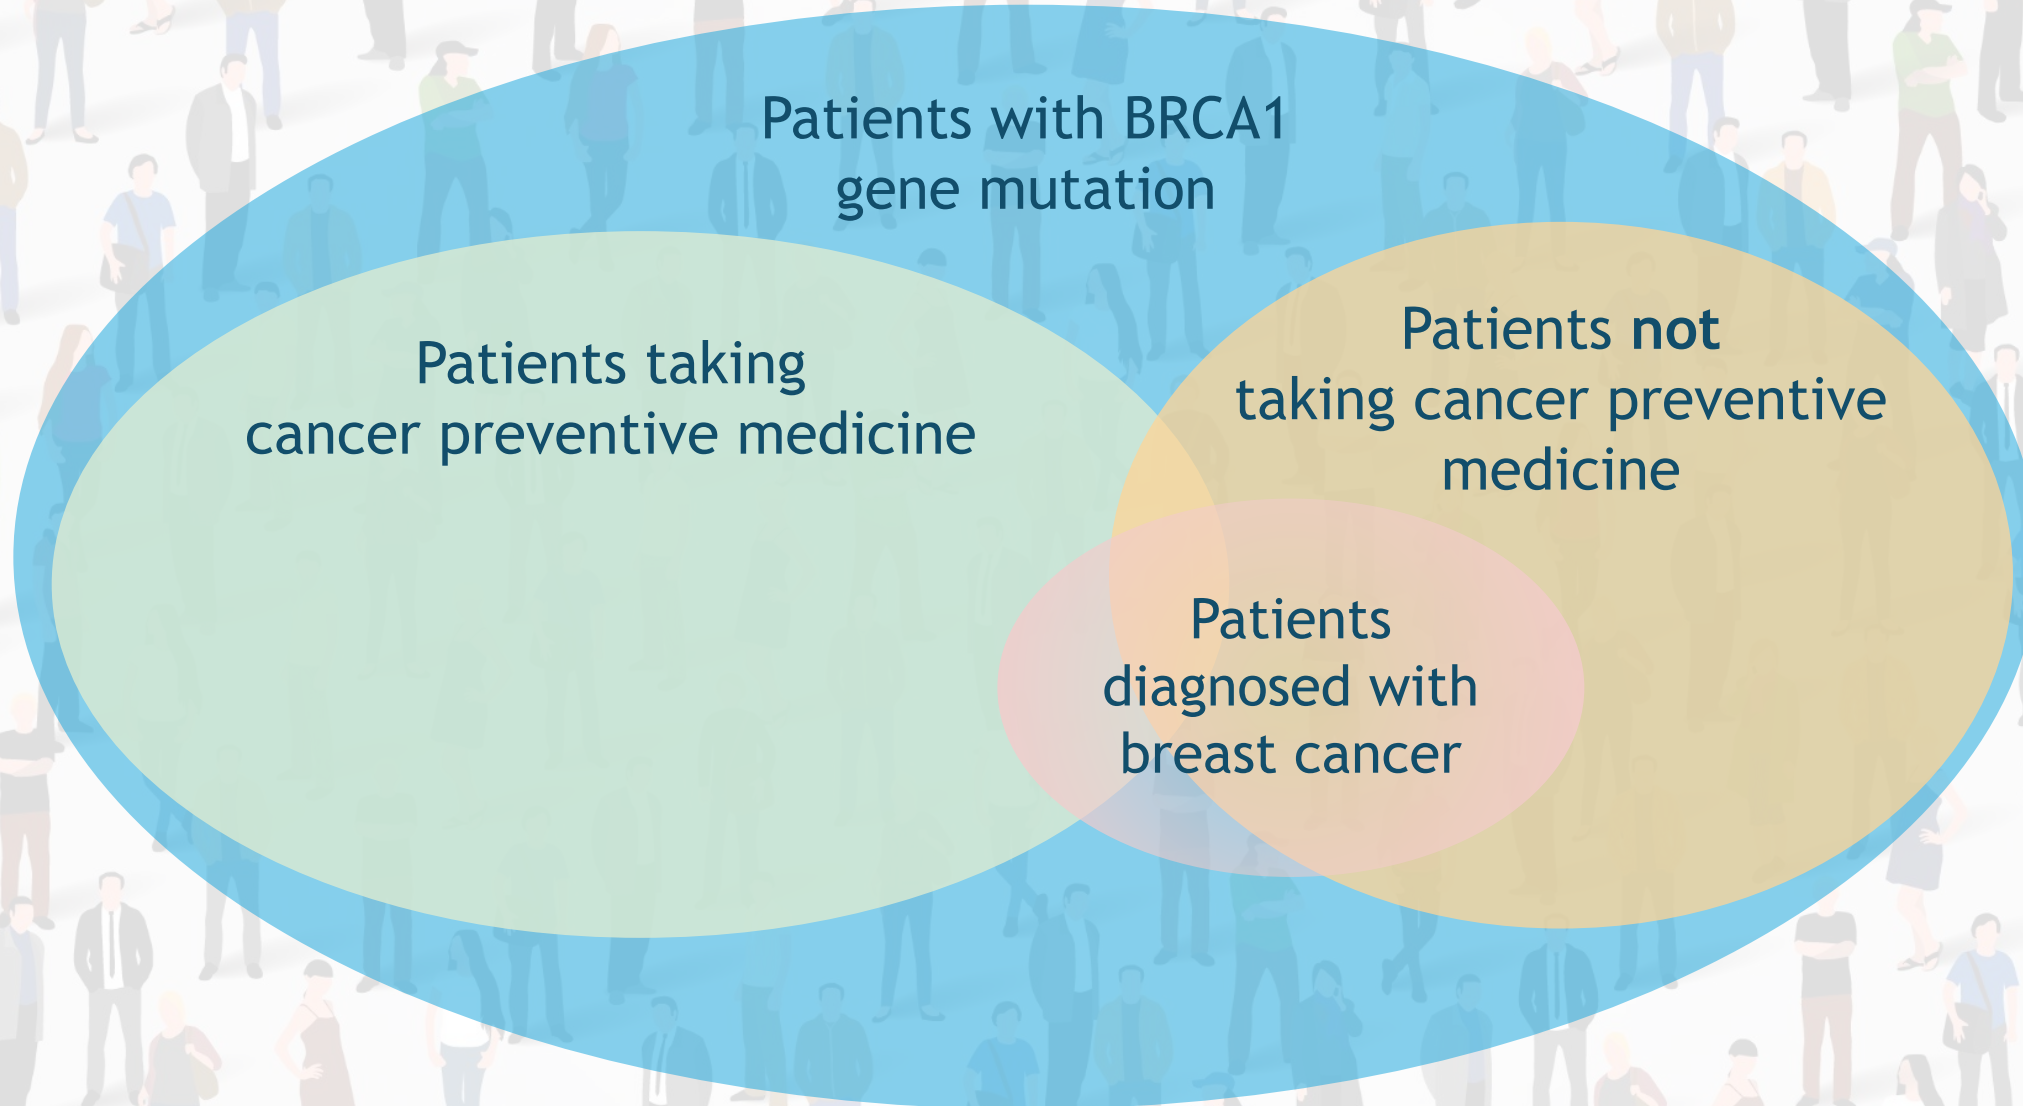

Does the medication significantly reduce the risk of cancer?

# Data Analytics - Scenario 3

# Data Analytics - Scenario 3

# SNOMED CT Queries

## Question

## What concepts

## Query

People with BRCA1 gene mutation

All concepts that are subtypes of the concept 'BRCA1 gene mutation positive'

```
<< 412734009  
|BRCA1 gene mutation positive|
```

People taking breast cancer preventive medicine?

All concepts that are types of either 'Tamoxifen-containing product', 'Anastrozole-containing product', or 'Raloxifene-containing product'

```
<< 75959001 |Tamoxifen-containing product|

# Demonstration

# Interpreting The Results

[snomed.org](http://snomed.org)

[@snomedct](https://twitter.com/snomedct)

[linkedin.com/company/ihtsdo/](https://www.linkedin.com/company/ihtsdo/)

# Interpreting Results (General)

- Correlation does not equal causation!
  - These reports create correlations which provide an important first step in clinical research, however a correlation on it's own does not provide enough evidence to support decision making
  - Additional statistical techniques should be used to verify the results
  - The Snolytical API supports accessing the raw data for this purpose
- We must check for alternative patterns and explanations for the results
  - For example, when comparing two drugs:
    - **Drug A** may appear to perform much better than **Drug B** when measuring outcomes alone.
    - However **Drug B** may be routinely chosen for patients with existing severe comorbidities because it has less side effects. Therefore which drug is prescribed is **not the only factor**.
  - Examples of factors that can influence outcomes:  
*existing conditions, lifestyle, family history, age, genetics, drug interactions.. many others*
