Observables Project Group – Agenda, July 1, 2008, Birmingham, England DRAFT

- 1) Welcome and introductions
- 2) Agenda review
- 3) Project purpose, scope, deliverables
- 4) Review of prior work
- 5) Specific recommendations

Project title: Revision of the SNOMED Observable and Investigation Model

Project Purpose:

- To improve consistency and usability of SNOMED CT for reporting the results of tests and observations, in all result reporting domains including laboratory, physical exam, radiography, pulmonary function testing, etc

Start Date: Jan 2008

Due Date: Dec 2009

Project Lead: Chief Terminologist

Scope:

To include :

- establish the concept model for observables
- develop implementation guidance for results reporting, using observation procedures and/or observables
- re-model the observable entities and observation procedures according to the new model

Deliverables:

- | | |
|---|-----------|
| ○ Proposed changes to concept model | July 2008 |
| ○ Complete modeling of observables | Dec 2009 |
| ○ Complete modeling of observation procedures | Dec 2009 |

Dependencies:

Progression of this project in 2008 may depend on the outcomes of discussion with LOINC and IUPAC.

386534000 | Arterial blood pressure (observable entity) |

Arterial blood pressure (observable entity)
Arterial blood pressure
ABP - Arterial blood pressure

Inheres in → Arterial structure
Characterizes → Cardiac process
Property type → Pressure (property)
Scale type → Quantitative

LOINC-SNOMED CT collaboration (a.k.a. LOINC mapping)

Observables implementation

Observables model stabilized

First modeled Observable entities released

Observables areas worked on

- Large areas of laboratory medicine
- Functioning together with Functioning project and Nursing CRG/SIG
- (Histo)pathology och molecular biology observables with IPaLM CRG/SIG
- Vital signs
- ...and smaller scale experiments in many areas

Observables model as of today

- All-in-all 20 attributes used to define Observable entities
- Model is stable, but changes can be made to accommodate for new use cases

Observables model principles

WHAT

HOW

Observables model principles

WHAT

Core temperature, also called core body temperature, is the operating **temperature** of an organism, specifically in **deep structures of the body** such as the liver, in comparison to temperatures of peripheral tissues.

HOW

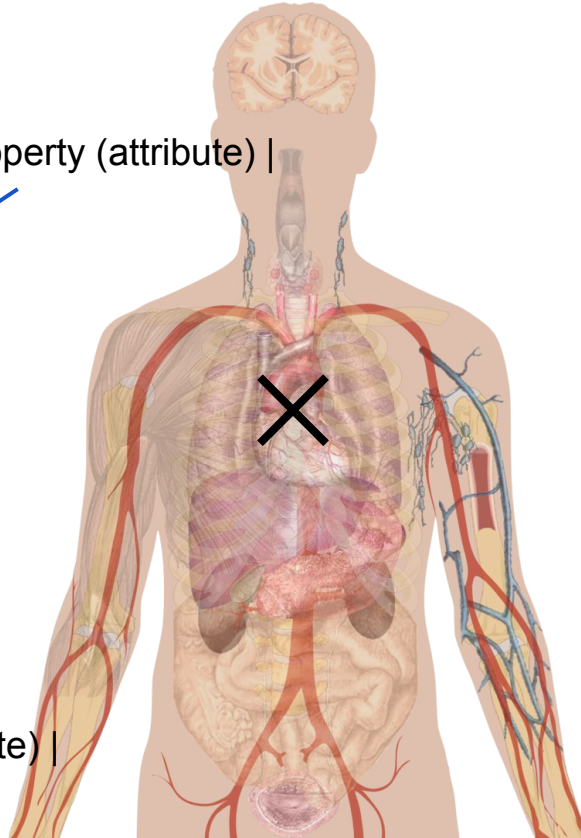

Observables model principles

WHAT

370130000 | Property (attribute) |

Core temperature, also called core body temperature, is the operating **temperature** of an organism, specifically in **deep structures of the body** such as the liver, in comparison to temperatures of peripheral tissues.

704319004 | Inheres in (attribute) |

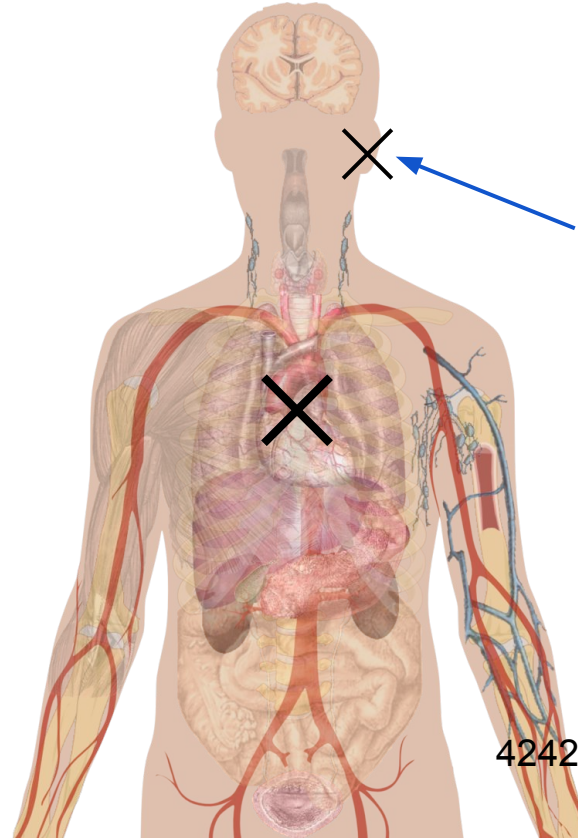

HOW

Observables model principles

WHAT

Core temperature, also called core body temperature, is the operating **temperature** of an organism, specifically in **deep structures of the body** such as the liver, in comparison to temperatures of peripheral tissues.

HOW

704327008 | Direct site (attribute) |

370132008 | Scale type (attribute)

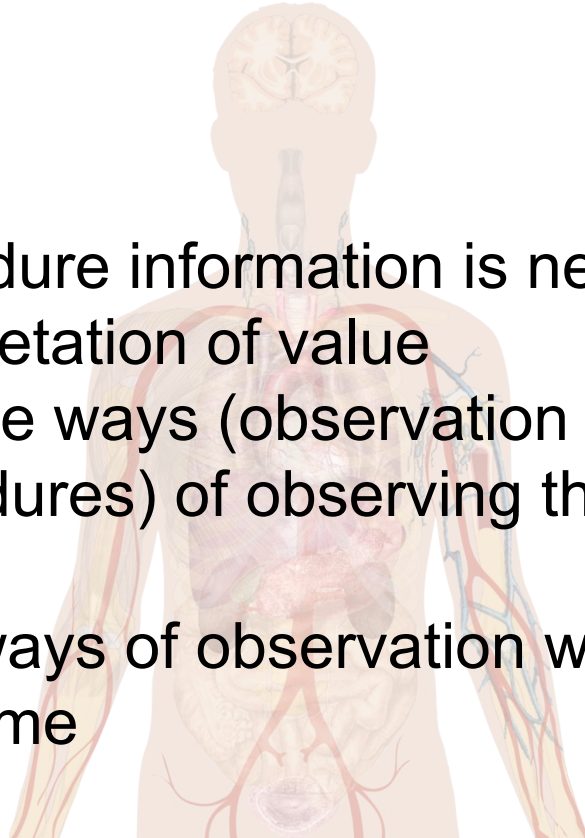

424226004 | Using device (attribute) |

Observables model principles

WHAT

- Procedure information is needed for interpretation of value
- Multiple ways (observation procedures) of observing the same “thing”
- New ways of observation will evolve over time

HOW

Kinds of observable

- Quality observable (including quantities)
- Process observable
- Function observable
- Disposition observable
- ...

Each require a (slightly)
different set of attributes

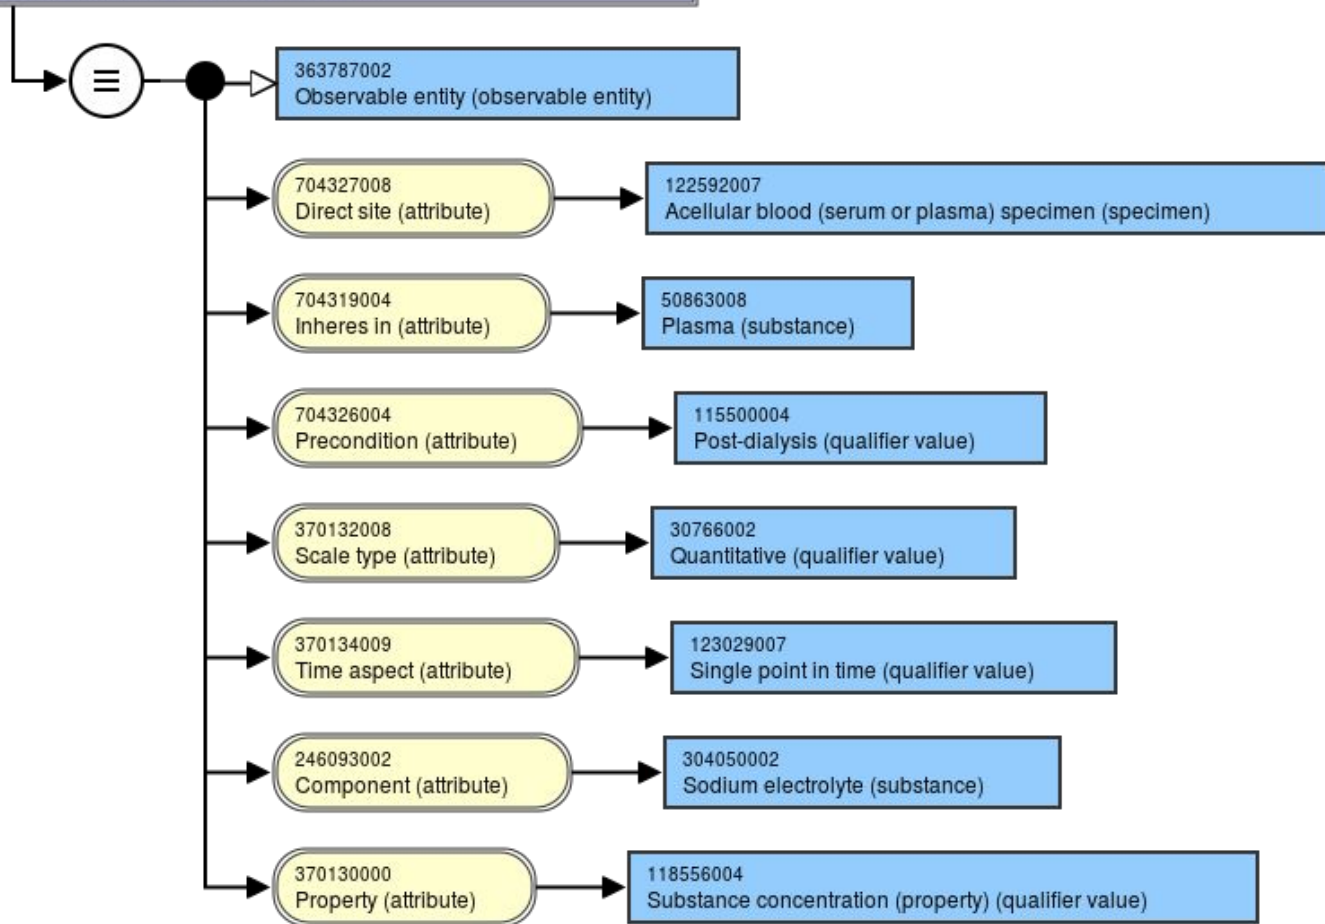

Avoid overloading
