

SNOMED CT Expo 2017

Data Normalization, Groupers and Other Transformations as Actionable Solutions for the Healthcare Ecosystem

Regis Charlot and Eric Rose, M.D.
Intelligent Medical Objects, Inc.

October 19, 2017

- Clinical Interface Terminology (CIT)
- CIT and HIE Solutions
- CIT and data “re-colorization”
- CIT and “grouped” content
- CIT groupers for analytics

Clinical Interface Terminology

Clinical Interface Terminology-Why?

right middle lobe
bronchial washings

kappa/lambda free light chains ratio
by immunofixation electrophoresis

at high risk for
decubitus ulcer

ability to self-administer
medications

debrancher enzyme deficiency

Type III glycogen storage disease

heart attack

**family history of
ulcerative colitis**

24 hour urine pyridinium
crosslinks measurement

blastic
plasmacytoid
dendritic cell
neoplasia
lymphoma

48h Holter

*demonstrate absence of signs
and symptoms of altered
glucose metabolism*

amylo-1,6-glucosidase deficiency

fundus photography

s/p TAH-BSO

Cori disease

subtotal
thyroidectomy

products of conception

schizotypal personality
disorder

limit dextrinosis

Clinical Interface Terminology-Why?

“The terms in our system are not clinically meaningful.”

“It’s impossible to express ourselves using [administrative terminology].”

“It’s so frustrating trying to find terms to document medical histories and patient problem lists....”

Clinical Interface Terminology-Why?

“The terms in our system are not clinically meaningful.”

“It’s impossible to express ourselves using [administrative terminology].”

“It’s so frustrating trying to find terms to document medical histories and patient problem lists....”

- Terms are hard to find
- Even when found, they are often poorly suited to clinical use
e.g. “strtctc impltj nstim eltrd w/record 1st array”

All this leads to...

- Incomplete and/or incorrect documentation
- Potential clinical risk
- Lost time and money due to under-coding or rejected claims
- Lost potential for secondary use of data (CDS, reporting, research)

Clinical Interface Terminology-Why?

right middle lobe
bronchial washings

kappa/lambda free light chains ratio
by immunofixation electrophoresis

at high risk for
decubitus ulcer

ability to self-administer
medications

debrancher enzyme deficiency

Type III glycogen storage disease

heart attack

**family history of
ulcerative colitis**

24 hour urine pyridinium
crosslinks measurement

blastic

products of conception

schizotypal personality
disorder

limit dextrinosis

Clinical Interface Terminology-How?

Clinician-Friendly Terms

- myocardial infarction with ST segment elevation
- ST elevation myocardial infarction
- ST elevation MI
- STEMI
- MI w/ST elevation

Standardized Health Vocabularies

SNOMED CT 401303003

Acute ST segment elevation myocardial infarction (disorder)

ICD-10-CM I21.3

ST elevation (STEMI) myocardial infarction of unspecified site

ICD-9-CM 410.90

Acute myocardial infarction, episode of care unspecified

ICD-10 (WHO) I23.3

Acute transmural myocardial infarction of unspecified site

Read CTV3 XalwM

Acute ST segment elevation myocardial infarction

Human Phenotype Ontology (HPO) 0001658

Myocardial infarction

MedDRA 10064346

STEMI

ICD-11 BA41.0

Acute ST elevation myocardial infarction

...and **MORE**

Clinical Interface Terminology-How?

- Precoordination sufficient to capture clinical understanding and intent

Clinician Selects

“carcinoma of breast, stage 1,
estrogen receptor positive”
IMO Lexical ID: 3539276

SNOMED CT 254838004 Carcinoma of breast (disorder)- primary
SNOMED CT 13104003 Clinical stage I (finding)- secondary
SNOMED CT 416053008 Estrogen receptor positive tumor (disorder)- secondary

- Alternative-Using SNOMED CT as an interface terminology
 - Clinician needs to select the three SNOMED terms *and*
 - It is more difficult to maintain association of all codes to single clinical entity

SNOMED CT 254838004 Carcinoma of breast (disorder)

AND

SNOMED CT 13104003 Clinical stage I (finding)

AND

SNOMED CT 416053008 Estrogen receptor positive tumor (disorder)

Term-specific unique identifiers

- What is the IMO Lexical ID?
 - The IMO Lexical ID is a unique identifier associated with an IMO term.
 - The IMO Lexical ID never changes for any given term.
- The value of the IMO Descriptions with unique Lexical IDs
 - Captures precisely what the clinician sees and does (Clinical Intent)
 - Retains all relevant code maps, *which are updated over time* as appropriate
 - Supports secondary use cases outside of clinical care

The IMO Lexical ID is the key to extracting the value created by clinician-led documentation

- Facilitates compliance with varying coding requirements
- Allows clinical intent to be maintained
 - Original clinical text preserved
 - No granularity lost as a result of code mapping
- Benefits amplified if both sender and receive use the same CIT
 - IMO currently used by over 550,000 clinicians in 8 countries
 - Data integrity maintained across multiple EMR and other health information platforms

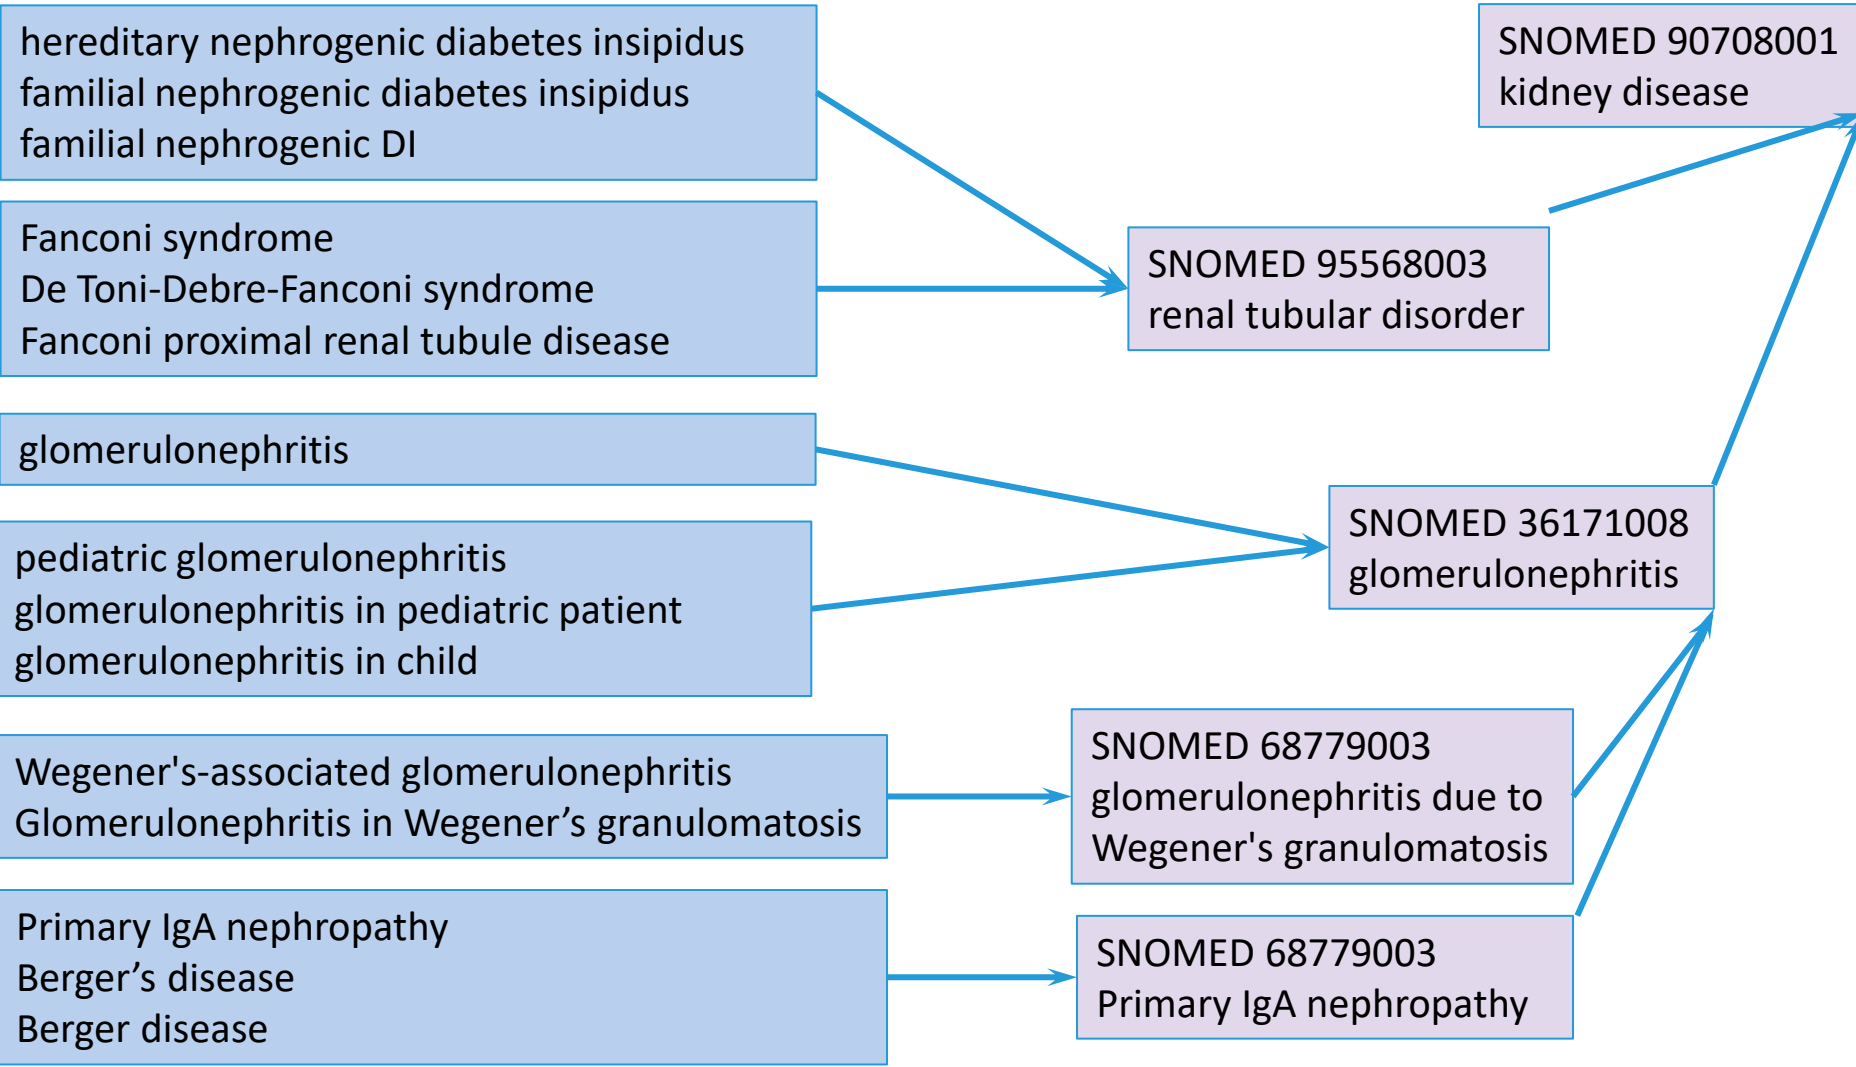

Exchange data with no loss of fidelity

Benefits of Clinical Interface Terminology: Analytics

IMO

SNOMED CT

Benefits of Clinical Interface Terminology: Analytics

- More accurate capture of clinical data → more detailed and precise reports
- Practice Profile Reporting
- Clinical Quality Measurement
- Risk based payment environments
- Clinical decision support systems (CDSS)

Accurate and complete code maps with well maintained clinical data allows for precise and custom analytics

Code mapping by domain

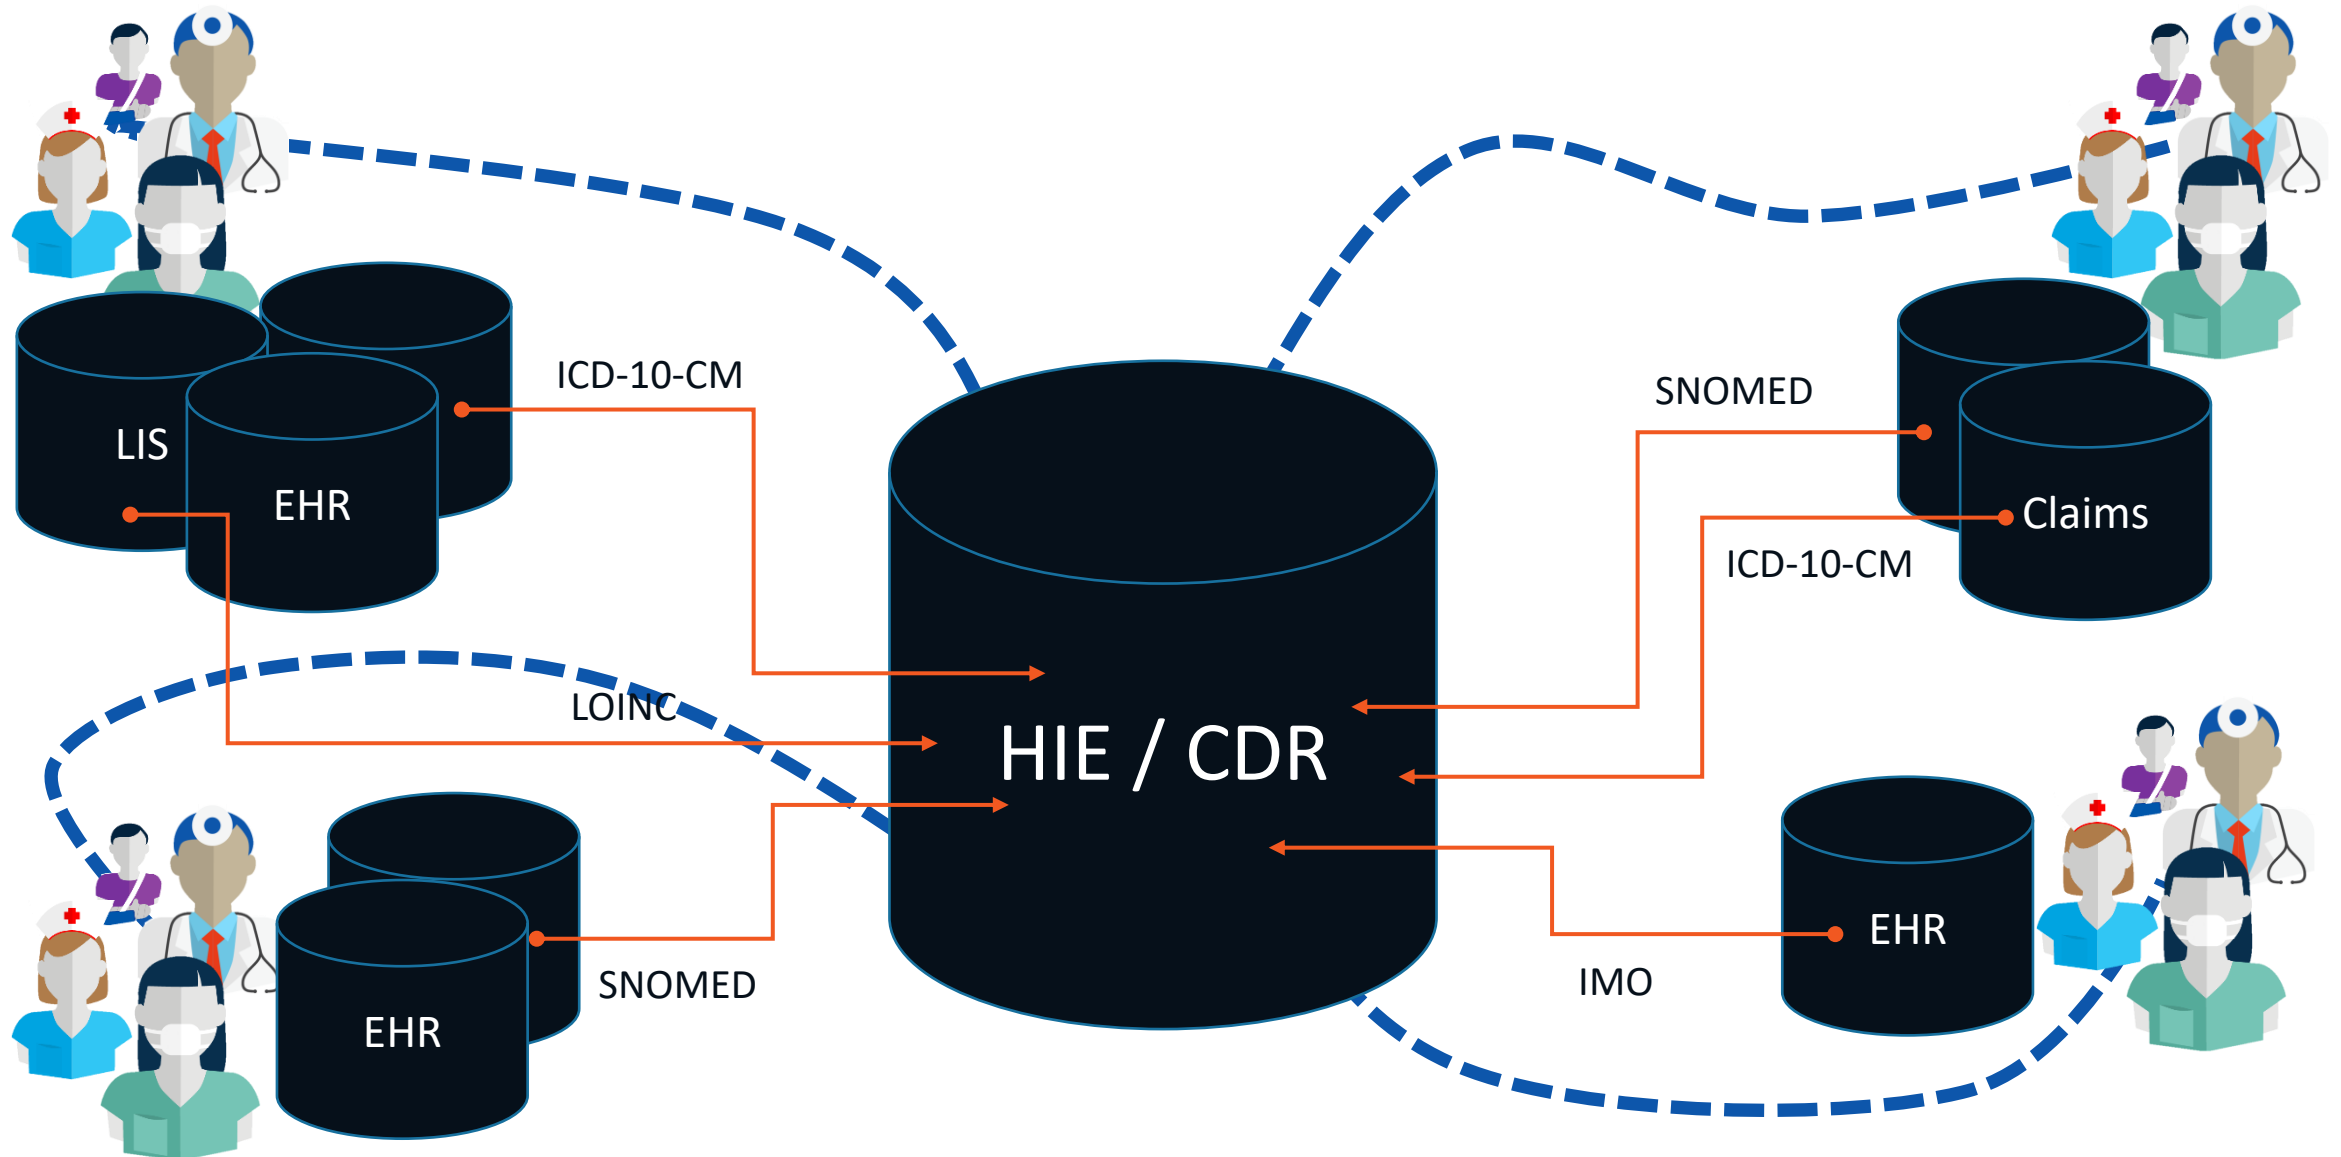

IMO Domain	Standardized Vocabulary Maps
Problems	SNOMED CT, ICD-10, ICD-10-CM, ICD-10-AM, ICD-10-CA
Procedures	SNOMED CT, LOINC, CPT4, ICD-P, ICD-10-PCS, HCPCS, CVX
Allergens (non-drug)/Medication	SNOMED CT, UNII, RxNorm, NDF-RT
Anatomical Site	SNOMED CT, HL7 Body Parts
Blood Product	SNOMED CT
Care Outcome	SNOMED CT
Document	SNOMED CT, LOINC, HL7 Document
Environment	SNOMED CT, HL7 Service Location
Observable	SNOMED CT, LOINC
Organism	SNOMED CT
Result Values	SNOMED CT
Specimen Type	SNOMED CT, HL7 Specimen Source
Topographical Modifiers	SNOMED CT

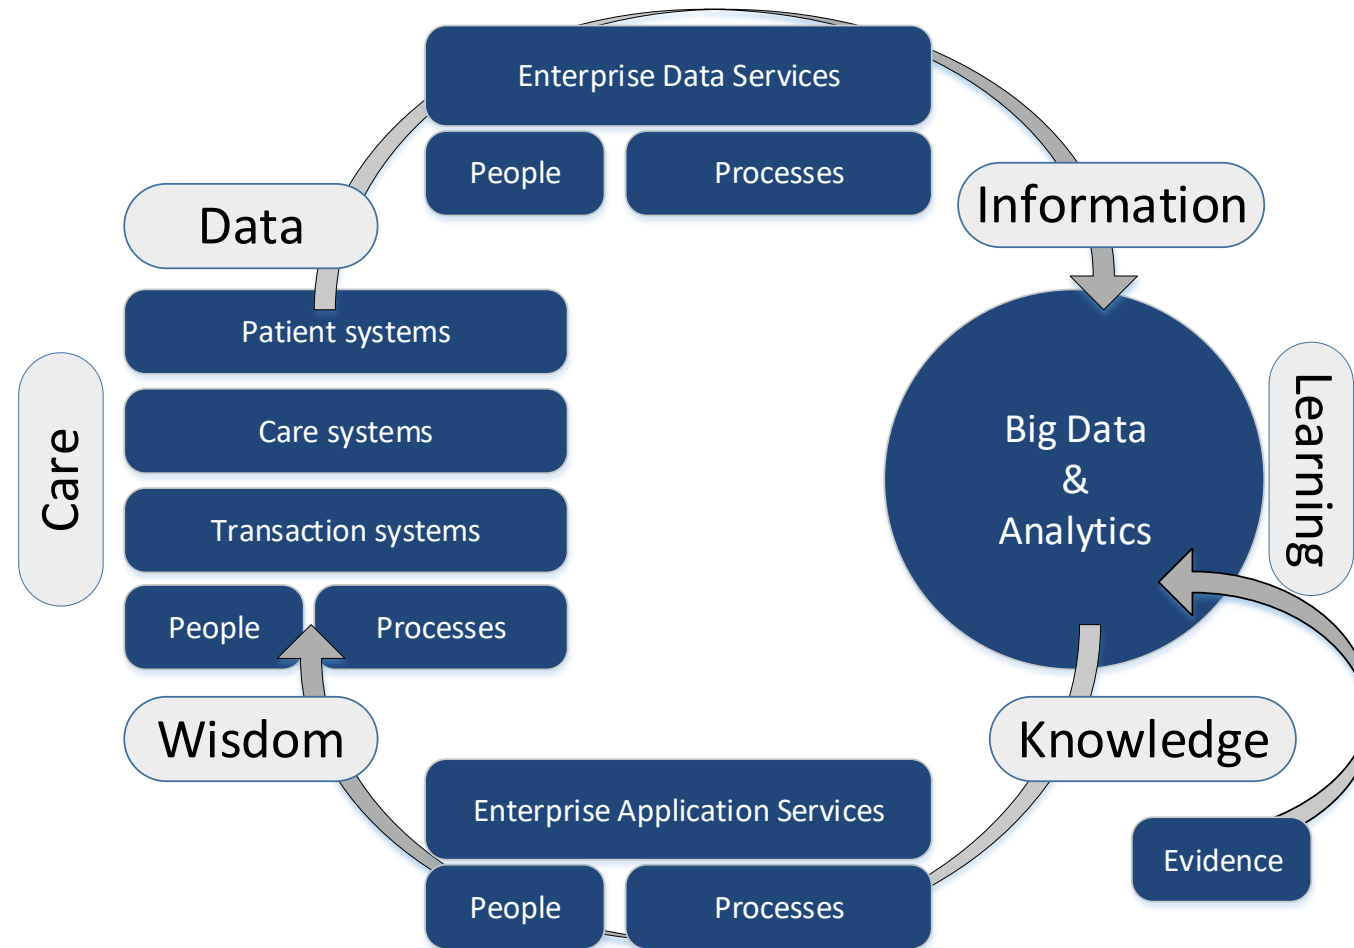

IMO HIE Solutions and Data Re-colorization

IMO Solutions for HIE / CDR

Healthcare Ecosystem

SYSTEM ANALYSTS

- Simple updates, easy maintenance
- Flexible platform to quickly deploy new services to care workers

CLINICIANS

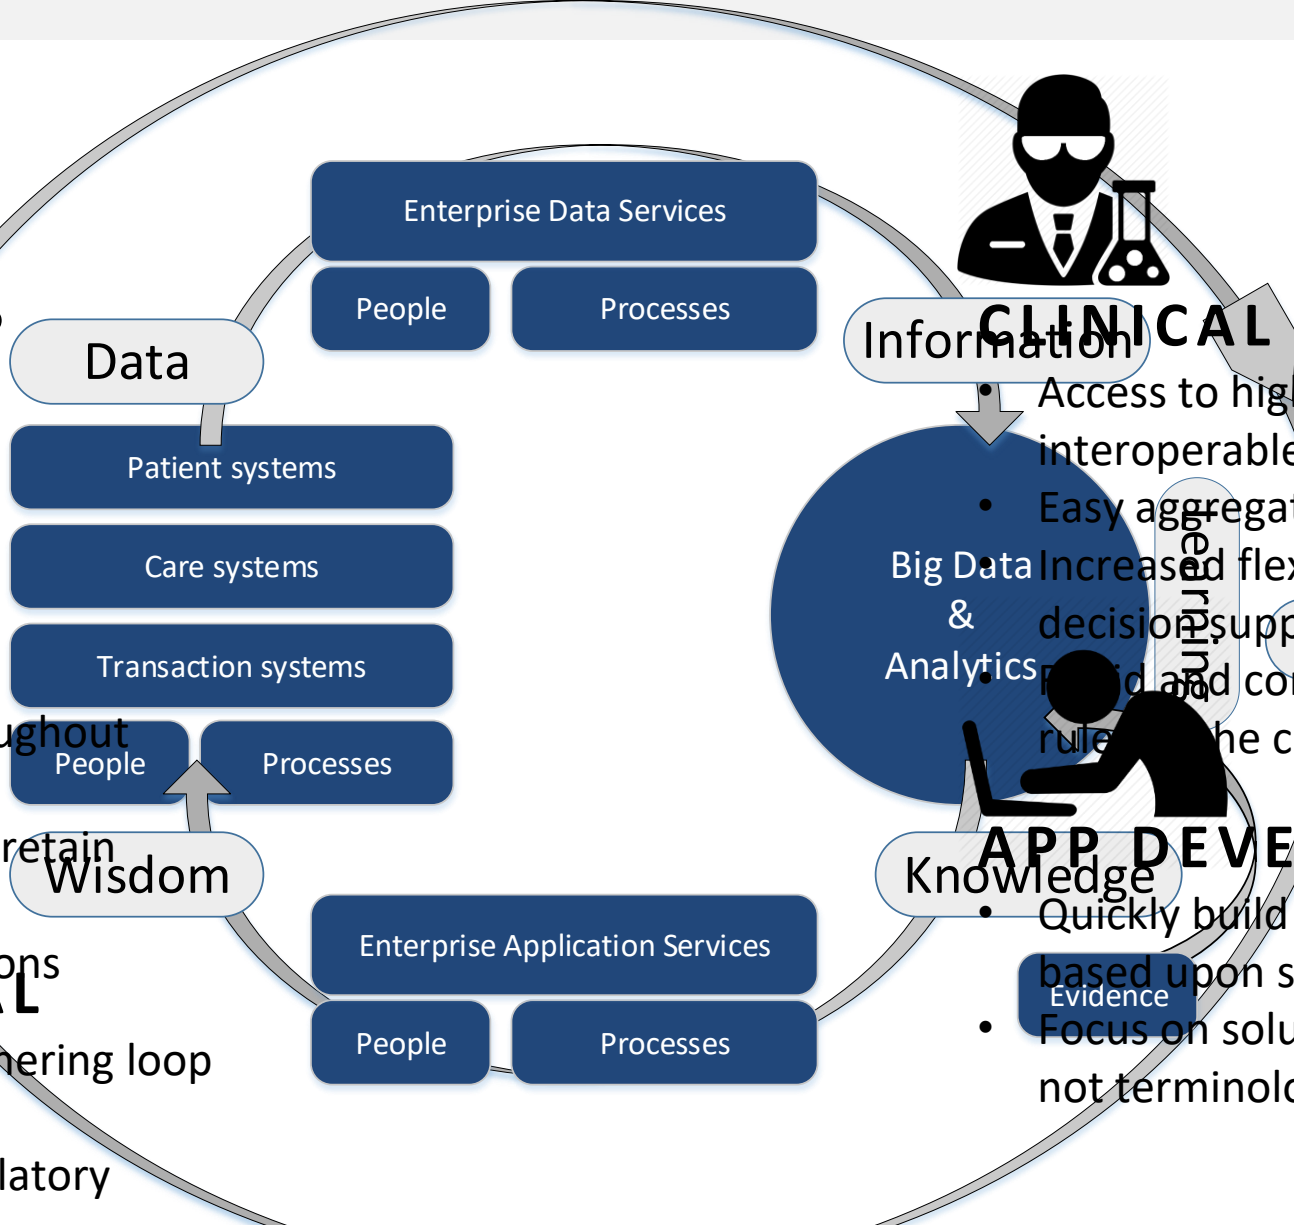

- Consistency of content throughout the enterprise
- Assure integrity of data and retain original intent

HIM PROFESSIONAL

- Real-time availability of lessons learned
- Reduce the information-gathering loop
- Coding decision support
- Receive differentials of regulatory updates

Care

CLINICAL INFORMATICIST

- Access to highly granular and interoperable clinical data
- Easy aggregation of information
- Increased flexibility to create clinical decision support rules
- Consistent deployment of CDS rules to the clinical workforce

APP DEVELOPERS

- Quickly build applications based upon sample code
- Focus on solutions for users, not terminology content

Structured Data Challenges

- Inbound systems report data in myriad coding systems
- Lost resolution from inbound system
- Downstream applications have separate inbound data requirements
- Crossmaps for each use-case are difficult to create and maintain

Structured Data Solutions

- Sync inbound documents and messages to IMO Clinical Interface Terminologies for downstream reporting, analytics, and clinical workflows
- Deterministically map coding systems to most appropriate IMO terms
- Solve “cross-mapping problem” between terminologies using IMO’s industry-leading terminology products
- IMO Terminology Solutions updated 10x / year and aligned to coding system regulatory updates

The importance of preserving clinical intent for analytics

Original Problem (IT) Term captured in EHR

Type 2 diabetes mellitus with stage 4 chronic kidney disease, with long-term current use of insulin

SNOMED CT

- 44054006 Diabetes mellitus type 2
- 710815001 Long-term current use of insulin

Typical C-CDA Interface

ICD-10-CM

- E11.22 - Type 2 diabetes mellitus with diabetic chronic kidney disease
- N18.4 - Chronic kidney disease, stage 4 (severe)
- Z79.4 - Long term (current) use of insulin

Standard Data Translation

Type 2 diabetes mellitus

SNOMED CT

44054006 Type 2 diabetes mellitus

ICD-10-CM

E11.9 Type 2 diabetes mellitus without complications

Chronic kidney disease and insulin usage lost in transaction – 500% reduction in risk profile for this patient based upon CMS HCC

Data Colorization with IMO

Bring back the Clinical Intent/Context to Existing Data Sets

Clinical Events/Story/Notes

Standard code based interfaces
(e.g. SNOMED / ICD)

Typical Encoding found in HIE

ICD or SNOMED-encoded Data

IMO

IMO
Terminology/Vocabulary/Tools
with Clinical Information + Codes

IMO can “color-ize” data with
Clinical Intent/Context

The importance of preserving clinical intent for analytics

Original Problem (IT) Term captured in EHR

Type 2 diabetes mellitus with stage 4 chronic kidney disease, with long-term current use of insulin

SNOMED CT

- 44054006 Diabetes mellitus type 2

C-CDA document w/ original IMO Term or lexical ID included

ICD-10-CM

- E11.22 - Type 2 diabetes mellitus with diabetic chronic kidney disease
- N18.4 - Chronic kidney disease, stage 4 (severe)
- Z79.4 - Long term (current) use of insulin

IMO Data Colorization Process

Problem (IT) Term w/ Colorization

Type 2 diabetes mellitus with stage 4 chronic kidney disease, with long-term current use of insulin

SNOMED CT

- 44054006 Diabetes mellitus type 2
- 237599002 Insulin treated type 2 diabetes mellitus
- 431857002 Chronic kidney disease stage 4
- 710815001 Long-term current use of insulin

ICD-10-CM

- E11.22 - Type 2 diabetes mellitus with diabetic chronic kidney disease
- N18.4 - Chronic kidney disease, stage 4 (severe)
- Z79.4 - Long term (current) use of insulin

Full clinical meaning retained in transaction.

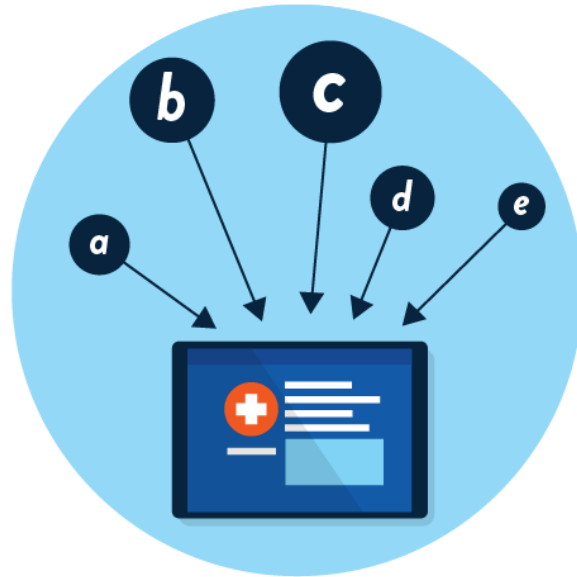

IMO Grouper Solution

The Challenge

- Modern EMR's allow for the capture of copious amounts of structured clinical data
- This data is often highly granular and disparate making analytics extremely difficult
- Government and private organizations are rapidly increasing the amount of reporting required
- The published value sets are routinely updated
- Creating custom reports is difficult and require significant maintenance overhead
- We need to be able to leverage Healthcare data to its fullest
- The many use cases often necessitate unique rules for group inclusion

Features and Benefits

- IMO can efficiently create quality groupers leveraging our content and our Clinical, Technical, and Coding terminology experts
- Provide Regulatory Value Sets
- Custom value sets for a wide range of use cases
- Management and maintenance – Need for continuous vetting
- Leverages existing IMO lexicals already in use in most EMRs
- Eventual creation of Value Set Library

Groupers- Definitions

Group or Value Set

- A collection of like terms and associated codes with a specific scope or purpose
- These may have a computable definition and associated meta data that align with or identify the group

Extensional Groupers- Externally defined value sets

- Administrative code groups
- Fixed set of codes and/or concepts
- Regularly augmented or modified

Intentional Groupers- Internally defined value sets

- Customer or IMO created
- Unlimited use cases
- Maximum flexibility
- May leverage one or more conceptual hierarchies
- Allow for precise and custom analytics

Best Practice Alerts

- Craft a best practice alert, such as "Identify whether this patient has diabetes, and if so, have they had a hemoglobin A1c in last 6 months".

Federal Initiatives

- Manage and maintain federally mandated value sets. IMO provides updates and annual differentials.

Quality Improvement/Document Retrieval

- Use IMO to build filters to automatically aggregate multiple IMO concepts within a single identifier. For example, all Chest CT scan results which include any form of pulmonary nodule in the text

Content Delivery

- Identify content (e.g. discharge instructions or patient education) relevant to a customer dictionary entry even though there is no direct match between dictionary entry and content master item.

Find Patients for Research

- Define precise queries to find specific patient types for clinical trials, therapies, etc.

In-Patient Only Surgeries

- Management and updates provided

Sensitive Data

- Identify and manage patients with data requiring special handling within institutions and for Transition of Care Documents

Predictive Analytics

- Risk Management: Identify and manage patients with CHF at high risk for re-admission due to co-morbidities

Public Health Reporting

- Cohort analytics and case reporting

User Interface Display

- Related problems, medications and lab results to ease viewing of patient data

Groupers for Analytics

Diabetes Mellitus:
