Clinical Engagement

- Approach

Kuala Lumpur
Ian Green

30th, October 2019

Why clinical engagement ?

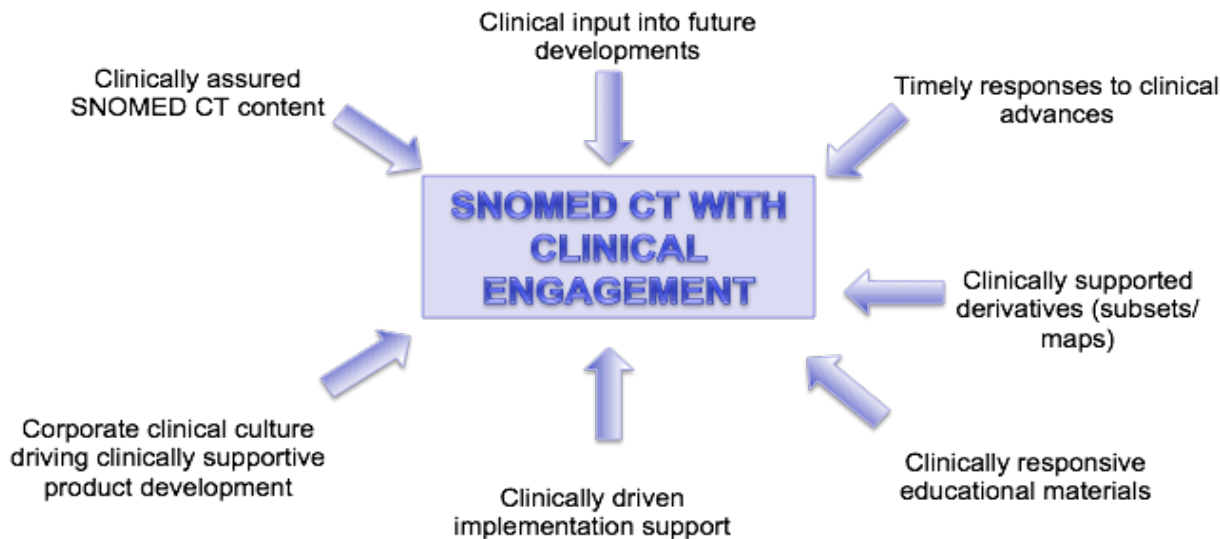

“Clinicians are frequently the first to hear, see and identify patient conditions and findings that need documentation. Further, clinicians are in a unique position to see correlations between the items that need documentation. Being able to contribute to terms, definitions, and the valuable relationships available within SNOMED CT improves usability. Working with the entire design team for an EHR allows for better presentation, and proper representation that may significantly contribute to timeliness, efficiency, and, most important, improved care outcomes”.

Mark Jurkovitch, Chair, SNOMED Dentistry Clinical Reference Group

Benefits of clinical engagement

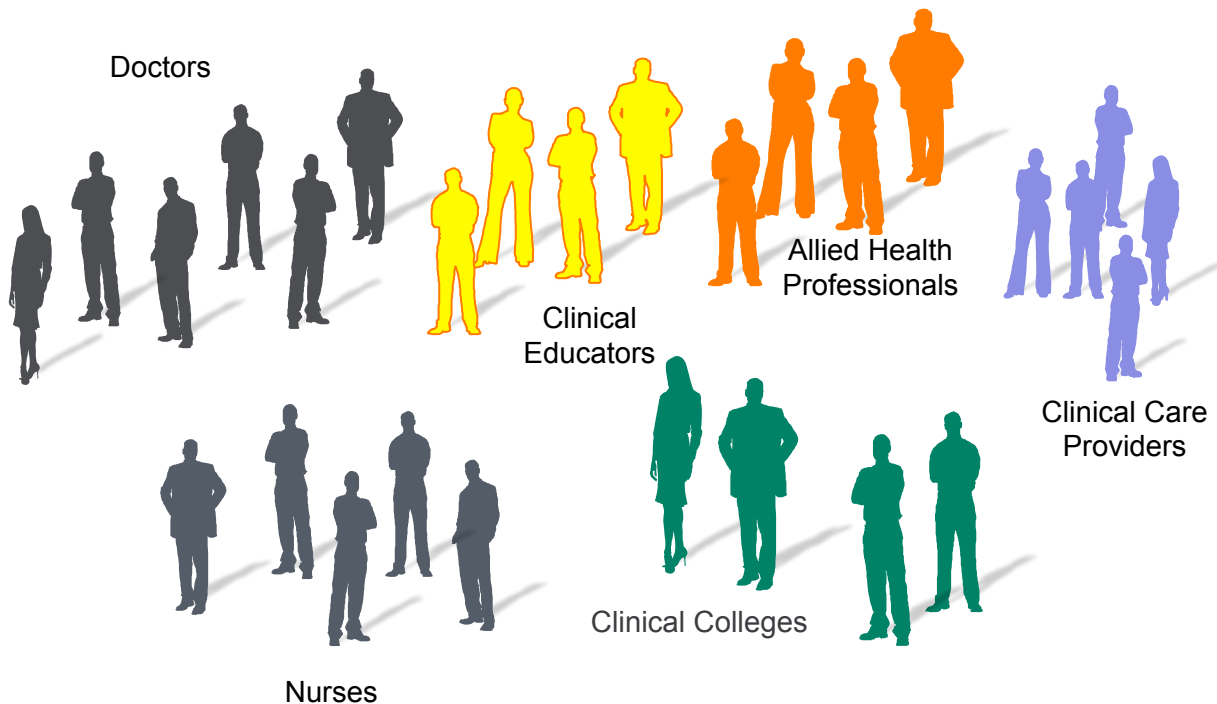

- Informing direction of SNOMED International products and services
- Improving quality, and thus clinical usability and acceptability, of SNOMED International products and services, based on clinical knowledge and expertise
- Identification of clinical champions who support and endorse the implementation of SNOMED CT and related products and services
- Promote collaboration between international healthcare professional groups that improve SNOMED International products and services

Clinical Engagement

SNOMED CT, enhanced by clinicians, to support current and future clinical practice

Who are our stakeholders ?

Vision of Clinical Engagement

To ensure that all activities of the SNOMED International are influenced by global clinical communities

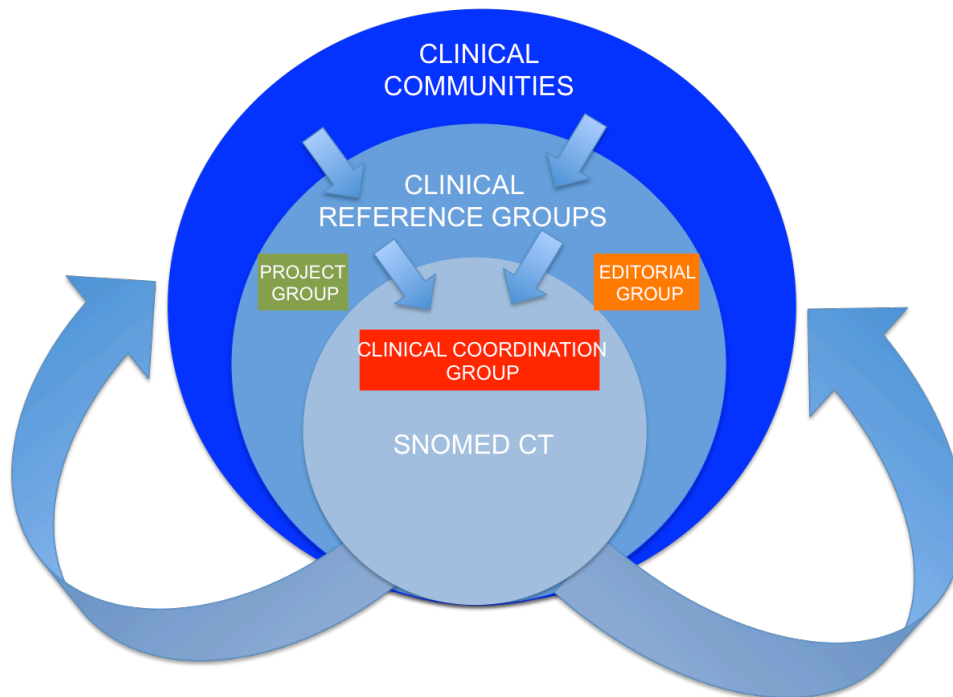

SNOMED International's culture has a progressive and sustainable approach to engaging clinicians

Clinical Engagement - Principles

- Raising the profile of clinical engagement within the organization
- Consistency of approach across the regions of the world in terms of clinical engagement
- Clinical engagement encompasses all healthcare professional groups globally
- Consistent and timely communication with National Release Centers and all relevant stakeholders
- Foster and encourage a culture of open engagement and discussion between clinicians
- Continuous leverage of experience and shared learning across the regions
- Assuring the quality and clinical relevance of SNOMED International products and services

Clinical Reference Groups (CRG's)

Clinical Reference Groups (CRG's)

- Facilitate discussion between clinicians focused on specific clinical specialties or topic areas
- Dedicated Confluence sites
- The aim is to provide a platform for clinicians to discuss with colleagues any questions, issues and experience relating to SNOMED CT and its implementation.
- Open and transparent
- Open to all, input not limited to just clinicians from the clinical specialty
- Linked to the CRG's are project groups focused on delivering agreed work items and editorial groups (providing clinical validation for derivative products)

What is the expectation from CRG's

- Whilst CRG's provide the framework, the expectation for the groups is to provide the following:
- A framework for multi-disciplinary topic discussion and working across professions
- Access to expertise from all clinical domains
- A mechanism for different levels of engagement
- Access to discussions on clinical developments by other groups (e.g. implementers), to ensure that products are developed that can be implemented within systems.
- Early identification of global changes to healthcare delivery

Directory - Clinical Reference Groups

Directory - Clinical Reference Groups

Created by Ian Green, last modified just a moment ago

The clinical resource groups are listed below in alphabetical order, and are listed by specialty. Each group is linked by hyperlink to the specific confluence pages belonging to that group. Please use the links provided to access the clinical reference group required.

ABC

Allergies Hypersensitivity and Intolerance

|| Anaesthesia

GHI

Genomics and Precision Medicine

General practice/Family practice

MNO

Mental and Behavioural Health

Nursing

STU

🕒 Suggest a new Clinical Reference Group

If you have a requirement for a new Clinical Reference Group, please email the details to crg@snomed.org, and mark the query Clinical Reference Groups

About Us

Clinical input into the development of SNOMED CT ensures that the terminology meets current and future clinical requirements. These activities form part of the broader approach of Clinical Engagement. Clinical engagement is currently supported by a dedicated team.

Although, each member of the Clinical Engagement team is located in a regional area, the Americas and Europe Middle East & Africa, the team looks to support clinical engagement activities across all regions through discussion and collaboration with local-based clinical colleagues.
