situation with explicit context

A concept that specifically defines the context of a clinical finding or procedure.

Notes

- A situation with explicit context is defined as a subtype of the situation to which it applies with an attribute associating it with the relevant clinical finding or procedure.

Example

- Family history of diabetes mellitus is a situation with explicit context concept. It defines the context as family history by indicating that the 32007 | Subject relationship context is a 303071001 | Family member.
- In contrast, diabetes mellitus itself is not a situation with explicit context. It can be used in many different situations including family history, past medical history or current diagnosis.

Alternatives

- Clinical situation
- Context
- Explicit context
