Event Modeling

When modeling an event, be sure to model the event itself and not the outcome of an event. The outcome of an event would be a finding or a disorder.

Event attributes

Under review at this time.

⚠️ Allowed ranges
The allowed ranges will not prevent some incorrect modeling. Some allowed attributes have not yet been used for modeling in the Event domain. The planned QI project will review the modeling to ensure consistency of use the allowed attributes.

✅ Modeling
Vaccine-related overdose

- For the January 2020 Release, vaccine-related overdose concepts in the Clinical Finding/Disorder hierarchy were inactivated. They were replaced with excessive dose concepts in the Event hierarchy.
- When authoring, determine whether the concept describes an overdose, a disorder, or the administration or ingestion of an excessive dose, an event.
