Archived Architecture Blueprints

This diagram represents a view of the logical architecture and the components that are included in scope during the 2023 WBI Replacement Project.

- **Architectural Model**: The architecture will have three different views: Planning, single concept, and overall.
- **Operational Service**: Combining architecture, tasks, and processes used by the team to deliver the final product. It includes software architecture components that deliver a defined service. Core components of the architecture are:
  - **Release Management**: Establishes a platform for managing the delivery of software components.
  - **Orchestration Service**: Necessary for the delivery of work flows that are applicable to deliver work components.
  - **Business Management**: Collaborates with architects, developers, and other teams to deliver work components.

---

Logical User Interface Dashboard

- **My Tasks**: My tasks and notifications.
- **My Services**: My services and associated tools.
- **My Profile**: My profile information.

An indication of the actual UI landing to show how this hangs together.
