| 3    | ECE Update | BGO   |       | • Reactive arthritis and modeling extraarticular manifestations using simple co-occurrence  
     |             |       |       | • Test of allergic disorder model as pathologic structure  
     |             |       |       | • Sepsis  
     |             |       |       | 1. Agreement to add dysregulated host response as a pathological process.  
     |             |       |       | 2. Agreement not to add pathologial process infectious process which would result in sepsis being defined as organ dysfunction syndrome co-occurent and due to infectious disease.  
     |             |       |       | • Test of device complications model  
     |             |       |       | • Device complications  
<pre><code> |             |       |       | Problems with the device itself should be a finding and not a disorder. This would allow some rearrangement of the current device problem findings. The modeling structure would be to use the INTERPRETS/HAS INTERPRETATION pair to define the findings. Should also create a more specific &quot;device failure&quot; to segregate from general external equipment failure. Desire to see more examples for each of the three patterns. | Bruce Goldberg to test modeling of sepsis both with and without the PATHOLOGICAL PROCESS |
</code></pre>
<p>| 4    | Drug Model Update | TMO   | Toni Morrison | to provide an update on the status of the drug project | See Events, Conditions, Episodes Project Group meeting agenda 2-12-2018 |</p>
