Hi CMAG members,

The Allergies/Hypersensitivity and Intolerance Clinical Reference Group is seeking information on which countries are using the allergy to substance concepts e.g. 417532002 [Allergy to fish (finding)] rather than just documenting allergies using substance and product concepts. Would you please advise the approach in your country here: Concepts used for documenting allergies. Due date has been made 24 December. If further time is required please email me.

Thanks everyone,

Cathy
