2019-03-19 Editorial Advisory Group Conference Call

Date: 2019

1800 - 1930 UTC
1100-1230 PDT
1400-1530 EDT
1600-1730 Argentina time

Zoom Meeting Details

SNOMED Int'l Editorial Advisory group

Please join my meeting from your computer, tablet or smartphone:

Topic: SNOMED Editorial Advisory Group Conference Call

Time: Mar 19, 2019 1900 UTC; 1100 PDT
https://snomed.zoom.us/j/464312001

Attendees

Chair:
- Jim Case

AG Members
- Guillermo Reynoso
- Paul Amos - ex officio
- Jeremy Rogers
- Bruce Goldberg
- Jeffrey Pierson
- Keith Campbell
- Toni Morrison

Observers:
- Cathy Richardson
- Ian Spiers
- Yongsheng Gao
- Penni Hernandez

Apologies

Meeting Files

Meeting recording
The folder containing the meeting recordings is located here.
The recording for this meeting is located here.

Objectives

- Obtain consensus on agenda items
- Provide resolution for outstanding issues

Discussion items

<td>ECE Update</td>
<td>BGO</td>
<td>Gout secondary to drug treatment  Secondary gout discussion Inactivation of secondary disorders.pptx Secondary diseases_SNO MED.xlsx Non-traumatic injuries Injury_damage traumatic_nontraumatic.pptx</td>
<td>• Injury discussion  - Damage and injury are often used synonymously  - ICD definition for injury is more specific to traumatic injuries  - Trauma is more of a process than a morphology  - Non-traumatic is difficult to define  - There is a gray area between traumatic and non-traumatic  ▪ Is this a false dichotomy - what is the use case for making the distinction?  - What are we trying to distinguish? External causes? Suggestion to consider using DUE TO = Event as opposed to a pathological process  - There is not much difference in treatment based on whether traumatic or non-traumatic  - Consider using the mechanism of injury rather than trying to distinguish trauma vs. non-trauma  - Initial step WRT non-traumatic brain injury proposed to create intermediate primitive</td>
<td>Test the use of DUE TO = event to model traumatic events Bruce Goldberg  Create a new primitive term &quot;Non-traumatic injury&quot; as a stop gap to address the obstacles to defining this notion Bruce Goldberg</td>

<tr>
<td>Substanc e role groups</td>
<td>TMO</td>
<td>Product role disposition  Product role options  Product role affected concepts</td>
<td>• Five options discussed  - Concern expressed by KCA that ignoring option 4 is not based on correct representation and does not address the true issue.  - What should be modeled in the core? Most of the modeling of therapeutic roles should occur in extensions.  - Recommend that option 4 be reworded to state that it would be an evolutionary approach  - The main problem is that the core is currently not modularized so it is not possible to segregate these relationships outside of the core module.  - The secondary issue is that the association of clinical drug to the product roles is jurisdictionally dependent.  ▪ Suggestion is that these associations be placed in a separate module</td>
<td>Test the potential for creation of a new attribute within a new International release module. This would be part of the International release, but could be excluded if desired (i.e. there is an extension replacement) - refer to MAG and TRF AGs for testing  Test use of non-defining attribute for future movement towards modularization - requires tooling change?  Maintain a role hierarchy without defined subtypes as part of the international release, except for those that can be identified as universally accepted, requiring national extensions to maintain differences. Use existing drug terminologies. Potential issues exist with leveraging the classifier for this.</td>
