Organism & Infectious Disease Model Project Home

Welcome to the IHTSDO Organism & Infectious Disease Model (OIDM) Project Space

This project is focused primarily on improving content of the Organism hierarchy of SNOMED CT to support three distinct but interconnected user needs:

1. Laboratory reporting
2. Public health / epidemiology
3. Logical definitions of infectious diseases

The OIDM Project Space is the primary means for communication with and among the members of the OIDM Project Group.

Scope

1. Develop / enhance the model for living organisms
   a. General model
      i. Attributes
      ii. Attribute values
   b. Specializations required for various organism categories
2. Identify consequences of modeling decisions on hierarchies for which organisms provide definitional content.
   a. Findings and disorders
   b. Procedures
   c. Substances
3. Guide decisions made IHTSDO editors
   a. SIRS requests
   b. Requests related to other content areas

Applicable IHTSDO procedures

Individual requests and editorial initiatives (models, styles etc.) require evaluation. From time to time the group will be asked to:

1. identify the impact to existing implementers and confirm priority,
2. estimate editorial requirements to address recommendations (including cost estimates),
3. communicate decisions to appropriate IHTSDO committees and users,
4. communicate with other PGs sharing interest in the organism hierarchy.

IHTSDO, Group and Confluence Participation Information

General Information

If you would like to participate in the activities of this group:

- If you do not have an account, go to the following page - Confluence User Accounts - to request an account. You will be asked to indicate which group you would like to be part of.

- If you have a confluence account please contact Jeff Wilcke or IHTSDO staff members in the group to request membership.

If you have any questions about navigating and using Confluence:

- please visit the User Guide or send an email to confluence-support@ihtsdo.org.
