

# Update SNOMED CT Search and Data Entry Guide

It might be useful if the [SNOMED CT Search and Data Entry Guide](#) were updated to reference the FHIR Terminology Services specification where relevant.

For example, use of the `/ValueSet/$expand?filter` operation, how implicit ValueSets can be used to constrain searches by hierarchy, reference set, and ECL expressions, and how ValueSets can be used as light-weight and flexible intensional / extensional alternatives to reference sets.
