# 1. Introduction

## 1.1. Background

SNOMED CT terminology provides a common language that enables a consistent way of indexing, storing, retrieving, and aggregating clinical data across specialties and sites of care.

SNOMED International maintains the SNOMED CT technical design, the content architecture, the SNOMED CT content (includes the concepts table, the descriptions table, the relationships table, a history table, and ICD mappings), and related technical documentation.

## 1.2. Purpose

This document provides a summarized description of the content changes included in the January 2021 release of SNOMED Clinical Terms® (SCT) International Release.

It also includes technical notes detailing the known content or technical issues where the root cause is understood, the fix has been discussed and agreed to, but has yet to be implemented.

The SNOMED International Release Notes are available alongside the January 2021 International Edition release.

## 1.3. Scope

This document is written for the purpose described above and is not intended to provide details of the technical specifications for SNOMED CT or encompass every change made during the release.

## 1.4. Audience

The audience includes National Release Centers, WHO-FIC release centers, vendors of electronic health records, terminology developers and managers who wish to have an understanding of changes that have been incorporated into the January 2021 International Edition release.

# 2. Content Development Activity

## 2.1. Summary

Continuous quality improvement and enhancement of existing content is an ongoing process undertaken by SNOMED International in preparation for every release. The January 2021 International Release has seen a continuation of the work driven by contributions from: Kaiser Permanente i.e. Convergent Medical Terminology (CMT), Global Medical Device Nomenclature Agency (GMDNA), Orphanet and other domain specific collaborations as well as requests received via the Content Request System (CRS).

Additionally quality improvement activities are advanced via project driven initiatives summarized below. Additional work items impacting every release are updates to the SNOMED CT derived maps such as ICD-10 and ICD-O; details are included in these release notes.

Information about editorial decisions may be found in the [SNOMED CT Editorial Guide](#); mapping guidance for ICD-10 can be found at this link <http://confluence.ihtsdotools.org/display/DOCICD10>

### NOTICE Change to Production Release

***The December 31st Member Release has been changed in time for the final Production Release on 31st January 2021. The Member Release should therefore be considered obsolete and should not be used for anything but test purposes. As always then, the final Production Release should be used in all systems.***

The reason for the changes was as communicated, in order to include important COVID-19 Vaccines content in the January 2021 International Edition, that wasn't available until January itself. Please see section 2.2 below for full details of these changes.

In addition, four concepts were submitted via the CRS for inclusion into the January 2021 release accompanied with the incorrect concept ID. During testing it was identified the following new concepts had concept ID that did not match the descriptions in the National extension from which they originated:

28421000087109|Structure of right suprascapular region of back (body structure)|

28431000087106|Structure of left suprascapular region of back (body structure)|

28271000087107|History of peritoneal dialysis (situation)|

28281000087109|History of attention deficit hyperactivity disorder (situation)|

The four invalid concepts along with all of their related components were "force deleted" from the SNOMED CT January 2021 International release after the Member release (31 December 2020) and before the Production release (January 2021).

The four concepts will retain their current status in a National extension and be considered for promotion to the International release at a future date. Additional validation rules are being created to prevent future recurrence of this issue.

| SCT Statistics  |               |
|---|---------------|
| Domain  | #New concepts |

1017214008 Viremia caused by Severe acute respiratory syndrome coronavirus 2 (disorder)|

Any concepts in scope for the SNOMED CT to ICD-10 mapping have been mapped and adhere to the World Health Organization current guidelines.

#### NOTICE

As part of the global effort to tackle the Coronavirus pandemic, SNOMED International has received several requests for content to be added for new vaccines as these have received approval by regulators in multiple countries.

Although the requests were received after the new content deadlines for the January 2021 Release, new concepts have been added in consultation with requestors. These new concepts are deemed to be of low impact and low risk to the release process whilst being of extremely high importance to users of SNOMED CT.

As vaccine-related requests and refinements to the original requests have been submitted to SNOMED International early in January 2021 this content has not been added to the 31st December 2020 Member Release, but instead to the final reviewed content in the Production Release on 31st January 2021.

Further information including details about the new concepts is available here [SNOMED CT COVID-19 Related Content](#)

## 2.3. Body structure

New body structure concepts: 381

### 2.3.1. Demonstration Release of the Anatomy Model

The plan is to implement the new anatomy concept model over forthcoming releases. There are approximately 35,000 anatomy concepts to be modeled by different types of 'part of' relationships. The new model will enable the automatic generation of hierarchies to further improve content quality and consistency. The integumentary system (about 2000 concepts) has been modeled. The musculoskeletal system (about 10,000 concepts) is the next hierarchy to be modeled. The concept model requires tooling enhancement to support nested expressions and further discussion about the inferred relationships for transitive and reflexive attributes. We will inform the community of the schedule for the demo release when the tooling and content are ready. The demo release will help us to gather feedback to evaluate potential impact and options for future releases.

### 2.3.2. Limbs/Girdles

There is mixed-use of the pelvic girdle and pelvic ring, shoulder girdle and shoulder in relation to the free limbs, limbs, and trunk. Existing content has been reviewed with about 200 model changes and impact to over 2000 classification results.

The following is a high-level view of hierarchical relationships for limb structures:

53120007 |Upper limb structure|

896766000 |Structure of free upper limb|

16982005 |Shoulder region structure|

26444007 |Shoulder girdle structure|

61685007 |Lower limb structure|

46862004 |Buttock structure|

29836001 |Hip region structure|

699617006 |Structure of free lower limb|

897012008 |Structure of bone and/or joint of pelvic girdle| - Note, this relationship is missing in the January 2021 release. It will be added in the next release.

The hierarchical relationships for trunk structures:

816092008 |Structure of pelvic cross-sectional segment of trunk|

46862004 |Buttock structure|

29836001 |Hip region structure|

12921003 |Structure of pelvis|

3665003 |Pelvic wall structure|

897011001 |Structure of pelvic ring|

897012008 |Structure of bone and/or joint of pelvic girdle|

Further detail can be found in the document [https://docs.google.com/document/d/1zIVNTxuiL7UrvB8mjbvDER0qJHzZjqe\\_ieVVfeqthNvc/edit?usp=sharing](https://docs.google.com/document/d/1zIVNTxuiL7UrvB8mjbvDER0qJHzZjqe_ieVVfeqthNvc/edit?usp=sharing)

### 2.3.3. Flexor annular pulley

Over 40 new concepts for flexor annular pulley of digits of hand have been added in this release.

### 2.3.4. Muscle tendon of toes

Over 20 new concepts have been added for flexor/extensor digitorum brevis/digitorum longus muscle tendons of toes.

### 2.3.5. Extensor compartment of wrist region

12 new concepts have been added for six extensor compartments of wrist region.

### **2.3.6. Nasal sinus structure**

Update to the subhierarchy to clarify that sinus structure includes bone, cavity, and mucous membrane of sinus. New concepts have been added for bones and cavities of most nasal sinuses.

### **2.3.7. Lumbar region**

The concept |Lumbar region| has been inactivated with reason ambiguous and has been replaced by new concepts |Lumbar region of abdomen| and |Lumbar region of back|.

Existing concepts that reference lumbar region, for example in the clinical finding and procedure hierarchy, have been reviewed and remodeled.

### **2.3.8. Interdigital webs and spaces of hand and foot**

New concepts have been added for interdigital web of hand and interdigital web of foot and the subtypes have been assigned.

### **2.3.9. Cell hierarchy**

The planned revision of Cell hierarchy has been put on hold. Further investigation is needed to determine if the SEP model should be applied for cell structure.

### **2.3.10. Anatomy changes to support Cancer Synoptic Reporting**

New concepts have been added to support this project:

- Structure of lower thoracic esophagus (body structure)
- Structure of middle thoracic esophagus (body structure)
- Structure of upper thoracic esophagus (body structure)

## 2.3.11. Joint implant/articular surface

Improvements made for articular surface of limb joint body structure concepts so these will now enable proper classification of the joint implants while modeling content in the devices hierarchy.

## 2.3.12. Inactivation of Tooth Anatomy Concepts

On the recommendation of the Dentistry Clinical Reference Group, the following concepts have been inactivated due to their potential to pose a clinical risk:

|  |   |
|--|---|
| 39844006  Structure of mandibular left canine tooth (body structure)           | 40005008  Structure of mandibular right second molar tooth (body structure)   |
| 113278005  Structure of mandibular left central incisor tooth (body structure) | 72876007  Structure of maxillary left canine tooth (body structure)           |
| 89625000  Structure of mandibular left first molar tooth (body structure)      | 31982000  Structure of maxillary left central incisor tooth (body structure)  |
| 77130001  Structure of mandibular left lateral incisor tooth (body structure)  | 23427002  Structure of maxillary left first molar tooth (body structure)      |
| 48402004  Structure of mandibular left second molar tooth (body structure)     | 25748002  Structure of maxillary left lateral incisor tooth (body structure)  |
| 47055002  Structure of mandibular right canine tooth (body structure)          | 66303006  Structure of maxillary left second molar tooth (body structure)     |
| 15422005  Structure of mandibular right central incisor tooth (body structure) | 80647007  Structure of maxillary right canine tooth (body structure)          |
| 28480000  Structure of mandibular right first molar tooth (body structure)     | 22120004  Structure of maxillary right central incisor tooth (body structure) |
| 82628004  Structure of mandibular right lateral incisor tooth (body structure) | 5140004  Structure of maxillary right first molar tooth (body structure)      |
| 11712009  Structure of maxillary right lateral incisor tooth (body structure)  | 7121006  Structure of maxillary right second molar tooth (body structure)     |

The concepts have been inactivated with reason 'ambiguous' and a historical association target of the permanent and deciduous tooth. For example: Structure of mandibular left lateral incisor tooth (body structure) has been inactivated as ambiguous and replaced by Structure of deciduous mandibular left lateral incisor tooth (body structure) and Structure of permanent mandibular left lateral incisor tooth (body structure).

## 2.3.13. Reference set updates

Updated and validated release file for the lateralizable body structure reference set.  
Updated and validated release files for the SEP refsets.

## 2.4. Clinical Finding

New concepts added for clinical finding hierarchy: 1702

### 2.4.1. Quality Initiative

The Quality Initiative (QI) project is the implementation of the Quality Strategy. After a successful pilot project for the July 2018 release the next stage has been implemented for subsequent releases including January 2021.

Quality improvement tasks were deployed to improve internal structural consistency and ensure compliance with editorial policy related to the stated modeling of content. Additionally, correction or addition of defining relationships was carried out to accurately reflect current clinical knowledge and ensure the semantic reliability of descriptions associated with a concept.

Total count of changes for the QI project:

- Stated: A total of 9463 concepts had changes made to the Stated relationships in the model.
- Inferred: A total of 15750 concepts affected by inferred changes.

| QI Project focus for January 2021 release (work has begun or been completed) |  |
|--|--|
| 419199007 Allergy to substance (finding)                                     | 56246009 Hypertrophy (morphologic abnormality)           |
| 37782003 Damage (morphologic abnormality)                                    | 708039003 Inflammatory lesion (morphologic abnormality)  |
| 5294002  Developmental disorder (disorder)  (excluding congenital disorders) | 4147007 Mass (morphologic abnormality)                   |
| 87642003 Dislocation (morphologic abnormality)                               | 708041002 Mechanical lesion (morphologic abnormality)    |
| 25723000 Dysplasia (morphologic abnormality)                                 | 52988006 Lesion (morphologic abnormality)                |
| 1806006 Eruption (morphologic abnormality)                                   | 36191001 Perforation (morphologic abnormality)           |
| 107682006 Fibrosis AND/OR repair abnormality (morphologic abnormality)       | 30217000 Proliferation (morphologic abnormality)         |
| 31883006 Fused structure (morphologic abnormality)                           | 125671007 Rupture (morphologic abnormality)              |
| 76197007 Hyperplasia (morphologic abnormality)                               | 19130008 Traumatic abnormality (morphologic abnormality) |

### 2.4.2. Fracture of vertebra without spinal cord lesion (disorder)

Based on input from the Editorial Advisory Group and a member stakeholder:

269061001 |Fracture of vertebra without spinal cord lesion (disorder)| and descendants have been inactivated with a status of 'Ambiguous' and the historical association POSSIBLY EQUIVALENT TO = 50448004|Fracture of vertebral column (disorder)|. These concepts originated from ICD-9 to represent the notion of "Fracture of X without mention of Y".

This type of term is not represented in ICD-10 or ICD-11. As "without mention" is not semantically equivalent to "without" and could mean that the information was not available in the record abstraction, these concepts are considered to be ambiguous in their meaning.

### 2.4.3. Malignant neoplasm

Updates for content relating to malignant neoplasm have now been completed with the exception of those concepts which belong to the hierarchy 269475001 |Malignant tumor of lymphoid, hemopoietic AND/OR related tissue (disorder)|.

### 2.4.4. Allergy to vaccine

Editorial guidelines and content for concept pattern "Allergy to X vaccine" have been updated for the January 2021 Release.

### 2.4.5. Adverse reaction to vaccine

Editorial guidelines and content for concept pattern "Adverse reaction to X vaccine" have been updated for the January 2021 Release.

### 2.4.6. Iatrogenic disorder

Subtypes of 12456005 |Iatrogenic disorder (disorder)| that do not have the word iatrogenic in the FSN have been remodeled so that they are no longer a subtype of this concept.

New subtypes have been added to 12456005 |Iatrogenic disorder (disorder)| where the disorder specifies *iatrogenic* in the FSN.

## 2.4.7. Lichen sclerosus et atrophicus

25674000 Lichen sclerosus et atrophicus (disorder) has been inactivated with reason outdated and replaced with new concept 895454001 Lichen sclerosus (disorder).

A new morphology concept 895217008 Lichen sclerosus (morphologic abnormality) has been created and used to remodel the new concept and its 20 descendants. This improvement has resulted in 895454001 Lichen sclerosus (disorder) having no stated subtypes (with all Sufficiently Defined where possible).

## 2.4.8. Contact dermatitis

Updated the modeling for 40275004 [Contact dermatitis (disorder)] and subtypes to adhere with a newly constructed template.

## 2.4.9. Hernia of abdominal cavity

The finding site value for hernia disorder concepts (excluding obstructed hernias which are being managed separately) has been reviewed and changes made where required to improve classification results.

## 2.4.10. Fetal finding

The value for the 363698007 [Finding site] attribute for fetal concepts has been updated to << 123037004 [Body structure] MINUS << 55460000 [Fetal structure] unless the site is a unique body structure present during the fetal period.

The fetal semantics are captured using the 246454002 [Occurrence]=303112003 [Fetal period] relationship. These modeling changes have been applied to the fetal content within the Clinical finding hierarchy. Fetal procedure concepts will be reviewed as part of the Procedure QI work.

## 2.4.11. Fetal or neonatal effect of maternal medical problem

206002004|Fetal or neonatal effect of maternal medical problem (disorder)| and descendants have been inactivated. Replacement concepts that do not include 'or' in the descriptions have been added as subtypes of 70591005|Fetal disorder (disorder)| and 22925008|Neonatal disorder (disorder)|.

## 2.4.12. Spina bifida

67531005|Spina bifida (disorder) and subtypes have been remodeled and marked as sufficiently defined where appropriate.

## 2.4.13. 'On Examination' and 'Complaining of' concepts

'On examination' and 'Complaining of' concepts have been inactivated in the International release and moved back to the UK extension.

## 2.4.14. Disorder X without Disorder Y

The vast majority of existing X without Y concepts originated from ICD-9 with the specific meaning of "X disorder without mention of Y disorder". As the phraseology indicates a lack of data about disorder Y as opposed to a specific exclusion, this type of concept has not been included in ICD-10, nor proposed for ICD-11, except in the case of "Traumatic brain injury without open intracranial wound".

Addition of new X without Y concepts may only be made under the following conditions:

1. The request for new content must be accompanied by a rationale as to the difference between "X disorder without Y disorder" and "X disorder."
2. Approval for addition is given by the Head of Terminology.

For the most part, existing X without Y concepts will be inactivated as AMBIGUOUS with a historical MAY BE relationship to "X disorder". Exceptions to inactivation will be made on a case-by-case basis.

## 2.4.15. Ventricular outflow tract obstruction

Occurrence 'congenital' has been removed from 253546004|Left ventricular outflow tract obstruction (disorder) and 253530007|Right ventricular outflow tract obstruction (disorder) with remodel of subtypes.

## 2.4.16. Human immunodeficiency virus

Human immunodeficiency virus Centers for Disease Control and Prevention and Human immunodeficiency virus World Health Organization class content has been updated to align with the current categories.

## 2.4.17. Chromosome replaced with ring or dicentric

268294001|Chromosome replaced with ring or dicentric (disorder)| has been inactivated and replaced by 1010276004|Ring chromosome (disorder). All subtypes have been remodeled and marked sufficiently defined where appropriate. 23345003|Ring chromosome (morphologic abnormality)| has been remodeled to align with expert input to have monosomy, trisomy and ring chromosome concepts as siblings in the morphology hierarchy.

## 2.4.18. Review of 419099009 |Dead (finding)| and 397709008 |Patient died (finding)|

397709008|Patient died (finding)| inactivated as a "Duplicate component" with historical association to 419099009|Dead (finding)|. All of the subtypes of 397709008|Patient died (finding)|moved to hierarchy 366044004|Finding of place of death (finding)| concepts that include 'patient' in FSN inactivated with status outdated and replaced by concept that does not use 'patient' in the descriptions. 304215001|Patient died during operation (finding)| inactivated and replaced with 876883006|Died during operation (finding)| subtype of 183676005|Died in hospital (finding)|. 184297005|Patient died in hospital (finding)| inactivated as a duplicate of 183676005|Died in hospital (finding)|

## 2.4.19. Nutrition finding

Remodeled relationships of descendants of 366358006 [Finding of nutrient intake (finding)] to align with template [Nutrition intake \(finding\) - v1.0](#) (*Please note, you may have to register for Confluence user account in order to access this link*).

Approximately 160 new definitions for nutrition content promoted from the US Extension with the approval of the Nutrition Clinical Reference Group.

## 2.4.20. Social Determinants of Health (SDoH) - Clinical Finding

In line with SNOMED CT priorities, and working with the US Extension of SNOMED CT to make Social Determinants of Health (SDoH) content available for international usage on the subject matter of food insecurity. This work was based on submissions from the US CRS for content for SDoH originating from the consensus-driven standards being developed by the Gravity project: <https://confluence.hl7.org/display/GRAV/The+Gravity+Project>

A new concept was added with a definition: 1078229009 [Food security (finding)]  
New definition for 733423003 [Food insecurity (finding)]

Also supporting SDoH work:  
1010682008 [Not entitled to social services assistance due to income above limit (finding)]

## 2.4.21. Content Tracker Project Updates

Work **completed** for the following Content Project:

- IHTSDO-668 Congenital absence vs. congenital partial absence.

**Notice: Inactivation reason of LIMITED/WAS\_A is not allowed for any new content inactivations after the July 2018 release. The WAS\_A association refset has not been updated thereafter.**

At the Editorial Advisory Group meeting in April 2019, agreement was reached to discontinue the maintenance of WAS\_A relationships when inactivating concepts that have a historical association to an inactive concept. When changes are made to a historical relationship for a concept that was previously inactivated using WAS\_A, effort will be made to assign a new historical relationship that facilitates traceability of the concept (e.g. DUPLICATE or AMBIGUOUS) as opposed to NON-CONFORMANCE TO EDITORIAL POLICY.

Existing WAS\_A relationships will be inactivated in a future release once a plan for batch reassignment of historical relationships has been developed. Until then, SNOMED International will not continue to use or maintain WAS\_A relationships.

**Notice: 'Co-occurrent and due to' pattern:**

During the implementation of the new Description Logic features, a conflict was uncovered between the modeling of 'Co-occurrent and due to' and General Concept Inclusions (GCI). This has resulted in the need to reconsider the modeling of 'Co-occurrent and due to' and update the Editorial Guide for this area.

The Editorial Guide and all concepts that are currently modeled as 'Co-occurrent and due to' will be updated over future release cycles.

## 2.5. Convergent Medical Terminology (CMT)

New CMT concepts: 621

## 2.6. Procedure

New concepts for procedure hierarchy: 237

### 2.6.1. Computed tomography angiography

After consultation with clinical stakeholders and the Editorial Advisory Group, the following changes have been implemented:

- 418272005[Computed tomography angiography (procedure)] and all subtypes have been remodeled to include attribute 424361007 [Using substance (attribute)] and value 385420005 [Contrast media (substance)] in the role group.
- The descriptions for 418272005[Computed tomography angiography (procedure)] and subtypes have been updated to explicitly state 'with contrast.'
- Where logical equivalence has been identified once the above changes have been implemented one of the concepts has been inactivated, in these cases the existing concept that stipulates 'with contrast' in the FSN has been retained.

### 2.6.2. Fluoroscopic angiography

After consultation with clinical stakeholders and the Editorial Advisory Group, the following changes have been implemented:

- Remodeling of 420040002[Fluoroscopic angiography (procedure)] and all subtypes to include attribute 424361007 [Using substance (attribute)] and value 385420005 [Contrast media (substance)] in the role group.
- The descriptions for 420040002[Fluoroscopic angiography (procedure)] and subtypes have been updated to explicitly state 'with contrast.'
- Remodeling as described above for 743 concepts.
- New descriptions were added to 640 concepts, including Fully Specified Name, Preferred Term and all synonyms.
- 2 new concepts were added.
- 117 Primitive concepts were made Sufficiently Defined - Note where logical equivalence was identified once the above changes were implemented this resulted in 11 concepts being inactivated, in these cases the existing concept that stipulated contrast in the FSN was retained.

### 2.6.3. Administration of vaccine

Updated inactivation reason to Outdated for "administration of vaccine products" that refer to "double" or "triple" but not for those that also refer to additional vaccines.

## 2.6.4. Social Determinants of Health (SDoH) Procedure

New evaluation procedure concepts:

1004109000 |Assessment of goals to achieve food security (procedure)|

1002223009 |Assessment of progress toward goals to achieve food security (procedure)|

1002224003 |Assessment for food insecurity (procedure)|

1002225002 |Assessment of barriers in food insecurity care plan (procedure)|

Also

1004110005 |Coordination of resources to address food insecurity (procedure)|

## 2.6.5. Laboratory procedure

Inactivation of 3 misplaced laboratory procedure concepts:

167350008 |Urine microscopy: no cells (procedure)|

167351007 |Urine microscopy: no epithelial cells (procedure)|

167352000 |Urine microscopy: no white cells (procedure)|

All referred to new findings concepts.

## 2.6.6. Nutrition procedure

Added one procedure concept for Nutrition: Administration of parenteral nutrition (procedure)|.

Remodeled relationships of many descendants of 182922004 |Dietary regime (regime/therapy)| to align with template.

## 2.6.7. Content Tracker Project Updates

Work continues on content tracker IHTSDO-175.

There are ongoing structural changes for the Procedure concepts related to the content tracker. Work on this project will continue for future releases after July 2021.

## 2.7. Collaboration/Harmonization Agreements

### 2.7.1. Orphanet

Working in collaboration with Orphanet (<http://www.orpha.net/consor/cgi-bin/index.php>), creation of new concepts for the original set of prioritized rare diseases has been completed.

The alpha release is now available for feedback, for more information please see **April 2020 SNOMED CT Orphanet Simple Map package ALPHA release available**

All of the concepts added for the Orphanet project have been mapped to ICD-10.

### 2.7.2. ICD-11 Update

A total of 500 new concepts were added for the January 2021 release.

### 2.7.3. Global Medical Device Nomenclature Agency (GMDNA)

33 new device concepts were added to the physical object hierarchy for GMDN for the January 2021 release.

For the GMDN mapping equivalence tables:

- 33 new concepts have been added to in scope and mapped.
- 199 concepts have been modified and removed from the mapping tool as out of scope.
- 84 concepts have been deemed obsolete and removed from the mapping tool and flagged as out of scope.
- 16 concepts have been flagged as out of scope for SNOMED CT and removed from this map.

### 2.7.4. ICD-O-3.2 Update

6 new morphologies have been added to the 108369006 [Neoplasm (morphologic abnormality)] sub-hierarchy and mapped to ICD-O-3.1, or researched and mapped to 'no target' as a suitable morphology code is not available in ICD-O-3.1:

- 1078227006 [High-grade non-invasive papillary urothelial carcinoma (morphologic abnormality)]
- 128804002 [Primary cutaneous CD30 antigen positive T-cell lymphoproliferative disorder (morphologic abnormality)]
- 397353001 [Lymphomatoid papulosis (morphologic abnormality)]
- 878856000 [Malignant lymphomatoid granulomatosis (morphologic abnormality)]
- 878865007 [Rhabdomyomatous mesenchymal hamartoma (morphologic abnormality)]
- 878881002 [Trichoblastoma (morphologic abnormality)]

Note - The published maps to ICD-O-3.1 are being updated only for maintenance purposes for the January 2021 release. The maps to ICD-O-3.2 are out of scope for the January 2021 release, and are planned for a future release after the publication of the ICD-O-3.2 classification.

## 2.8. Event

New concepts added: 29

## 2.9. Qualifier Value

New concepts added: 41

## 2.10. Social context

New concepts added: 6

Inactivation of subtypes of 372148003[Ethnic group (ethnic group)] - concepts which include "other" or relate to UK census have been inactivated from the International release and moved back to the UK extension.

## 2.11. Situation with explicit context

New concepts added: 109

Content that included the word 'unilateral' in the FSN has been reviewed and inactivated with a status of ambiguous where appropriate. Replacement left and right concepts have been created in the clinical finding or procedure hierarchy where required.

## 2.12. Physical object

New concepts added: 47

Concepts inactivated: 10

- Approximately 420 "Has compositional material" attribute and value relationships were added to concepts in the physical object hierarchy, e.g., 415529004 [Silicone punctal plug (physical object)] was given a relationship of "Has compositional material (attribute)" with value of 13652007 [Silicone (substance)].
- Approximately 100 attribute-value relationships were added to the physical object hierarchy for device characteristic of being coated or uncoated.
- Approximately 35 attribute-value relationships were added to the physical object hierarchy for device intended sites including head of femur and acetabulum.
- Approximately 50 gastrointestinal implant device concepts in the physical object hierarchy were modeled with the new device attributes. Some of these concepts had FSN and description changes as well.

## 2.13. Specimen

New concepts added: 16

## 2.14. Special concept

362955004 [Inactive concept (inactive concept)] and its seven descendants have been inactivated. When the first release format (RF1) was used, inactivated content was moved into this hierarchy. However, this approach is no longer used in the current release format (RF2).

## 2.15. Observable Entity

Added 180 new concepts, mainly in the area of nutritional intake such as Measured quantity of fat and oil intake in 24 hours (observable entity).

- Inactivated ~30 dietary concepts including "Dietary X intake (observable entity)" e.g., 162513004 [Dietary fat intake (observable entity)] and Prescribed dietary intake (regime/therapy)
- Removed the Scale type attribute and value relationship from ~200 nutritional intake observable entity concepts to align with current editorial policy.
- Updated the Property attribute value and FSN for ~100 nutritional intake observable entity concepts

## 2.16. Organism

New organism concepts added: 164

Organism name changes: 101

## 2.17. Pharmaceutical/Biological Product

### Drug model project

For further details on the planned changes in this area, please refer to the Drug Model Working Group Directory section.

*Please note, you may have to register for Confluence user account in order to access this project and the relevant link*

### 2.17.1. Active immunity stimulant therapeutic role

318331000221102 |Active immunity stimulant therapeutic role (role)| updated based on feedback received and with agreement from Drugs WG:

New FSN = Active immunity stimulant role (role)

New PT = Active immunity stimulant role

Stated parent changed from 766941000 |Therapeutic role (role)| to 766940004 |Role (role)|

### 2.17.2. Biological agent (product)

High-level grouper 69509008 |Biological agent (product)| was inactivated based on agreement from Drugs Working Group; the concept did not have any stated or inferred descendants.

### 2.17.3. Vaccine product "containing" groupers

Vaccine product "containing" groupers that are modeled with more than one active ingredient or with an active ingredient that is a substance modification have been inactivated as out of scope per the editorial guidelines.

## **2.17.4. Blood derivative product (product)**

High-level grouper 346348003 |Blood derivative product (product)| was inactivated based on agreement from Drugs Working Group; the descendants were reviewed and remodeled using the existing medicinal product concept model.

## **2.17.5. Has ingredient characteristic and Has product characteristic attribute**

Based on feedback provided by the Editorial Advisory Group, the Has ingredient characteristic and Has product characteristic attributes will be refined to more specific attributes in a future release.

## **2.17.6. Medical gases**

349362006 |Medical gases (product)| was inactivated as outdated; descendants were remodeled per existing Medicinal product editorial guidelines. Exceptions to allow 385217004 |Conventional release gas for inhalation (dose form)| as a manufactured dose form for Medicinal product form concepts and synonyms for percent and parts per million strengths for Clinical drug concepts added to editorial guidelines. Note that existing concepts such as 320917000 |Oxygen gas (product)| or 421396006 |Helium + oxygen gas (product)| were remodeled as MP-only concepts as per decision made earlier in Medicinal product project.

## **2.17.7. Roles**

Modeling of roles for medicinal product concepts was initiated; a log of roles modeled is available at Drugs Project in anticipation of removing product role groupers from the Substance hierarchy and using Medicinal product concepts as attribute values in the International Release for modeling concepts in other SNOMED CT hierarchies.

## 2.17.8. TallMan lettering

The Drugs Working Group agreed TallMan Lettering should be addressed in a National Extension, not the International Release.

## 2.18. Veterinary Extension

2 concepts were moved to the Veterinary Extension.

## 2.19. Metadata concept

New concepts added: 37

New metadata concepts have been added to support postcoordinated expressions.

- Reference set concepts:
  - 1119417006 |Postcoordinated expression type reference set (foundation metadata concept)|
  - 1119435002 |Canonical close to user form expression reference set (foundation metadata concept)|
  - 1119468009 |Classifiable form expression reference set (foundation metadata concept)|
- Reference set attribute concepts:
  - Subtypes of 706999006 |Expression (foundation metadata concept)|:
  - 1119454002 |Compositional grammar expression (foundation metadata concept)|
  - 1119455001 |Close to user form expression (foundation metadata concept)|
  - 1119436001 |Canonical close to user form expression (foundation metadata concept)|
- Subtypes of 900000000000457003 |Reference set attribute (foundation metadata concept)|:
  - 1119456000 |Substrate (foundation metadata concept)|
  - 733616009 | Authoring substrate (foundation metadata concept) |
  - 1119457009 |Classification substrate (foundation metadata concept)|
- Attribute type concepts:
  - Subtypes of 707000009 |SNOMED CT parsable string (foundation metadata concept)|:
  - 1119437005 |SNOMED CT compositional grammar (foundation metadata concept)|
  - 1119458004 |SNOMED CT expression constraint language (foundation metadata concept)|
  - 1119459007 |SNOMED CT expression template language (foundation metadata concept)|
- Subtype of 900000000000460005 |Component type (foundation metadata concept)|:
  - 1119460002 |Postcoordinated expression type component (foundation metadata concept)|
- Subtype of 900000000000460005 |String (foundation metadata concept)|:
  - 1119461003 |Uniform resource identifier (foundation metadata concept)|
  - 900000000000469006 | Uniform resource locator (foundation metadata concept)|

## 2.20. Substance

New concepts added: 103

New disposition and Disposition grouper concepts added: 6

As part of the Substance hierarchy maintenance, 81118006 |Gonadal hormone (substance)| was inactivated and replaced with 312263009 |Sex hormone (substance)|. The concepts previously subsumed by Gonadal hormone were remodeled where applicable.

### Release plans, Substance hierarchy

For further details on the planned changes in this area, please refer to the Substances project.

*Please note, you may have to register for Confluence user account in order to access this project and the relevant links above.*

## 2.21. Internal Quality Improvement

## 2.21.1. Replacement of the Stated Relationship files with the new OWL Axiom refset files

A set of documentation has been developed to support the Logic Profile Enhancements.

- [SNOMED DL Profile Enhancements](#)
- [SNOMED CT Logic Profile Specification](#)
- [SNOMED CT OWL Guide \(OWL Refsets specification\)](#)
- [Snomed OWL Toolkit - https://github.com/IHTSDO/snomed-owl-toolkit](https://github.com/IHTSDO/snomed-owl-toolkit)
- [Classifying SNOMED CT using the Snomed OWL Toolkit - https://youtu.be/-91egY9mJqA](https://youtu.be/-91egY9mJqA)
- [Creating an OWL file containing SNOMED CT - https://youtu.be/sfFbMMioA\\_4](https://youtu.be/sfFbMMioA_4)

For any questions, please contact SNOMED International at [support@snomed.org](mailto:support@snomed.org) with "OWL Axiom refset files implementation question" in the subject line.

## 2.21.2. Machine Readable Concept Model (MRCM) Changes

Changes to the MRCM for the January 2021 release include:

- MRCM for new attribute |Unit of presentation size quantity|
- MRCM for new attribute |Unit of presentation size unit|
- MRCM: Expand the range of 370133003 |Specimen substance (attribute)| to include << 373873005 |Pharmaceutical / biologic product (product)| and << 260787004 |Physical object (physical object)|
- MRCM: Expand the range of 246501002 |Technique (attribute)| to include <<254291000 |Staging and scales (staging scale)

Further detail can be found at [MRCM changes in the January 2021 release](#) (Please note, you may have to register for Confluence user account in order to access this project and the relevant links above).

## 2.21.3. Concrete Domains and Numeric Representation

Please see here (and the various sub-pages) for details of the current proposed technical changes: <https://confluence.ihtsdotools.org/mag/concrete-domains-community-of-practice-consultation>. (Please note, you may have to register for Confluence user account in order to access this link).

In this child page in particular there is guidance on the impact for both maintainers of SNOMED CT plus for implementers and vendors of software that utilises the terminology: <https://confluence.ihtsdotools.org/mag/concrete-domains-community-of-practice-consultation/snomed-international-proposal-for-representing-concrete-domains-in-rf2>

*Please, however, be aware that the technical proposal is still in the consultation stage, and therefore changes to the proposal **may still be made** before the final solution is implemented.*

The transition has been discussed and agreed with numerous stakeholders from the community, and as such is targeted to be implemented over the course of the next two International Release cycles, as follows:

### Q1 2021:

- A technical preview will be published in line with the January 2021 International Edition, with drug concept strengths and counts expressed as concrete values in the new Relationships file.

- This is currently planned to be a full RF2 International Edition package (as opposed to a standalone Delta file containing Concrete Domains), containing all International content in addition to the new Concrete Domains Relationship file
  - (ie) it will comprise the January 2021 International Edition release *as if we had already transitioned to Concrete Domains*, as a preview of what the final Release package will look like when the transition is complete.

#### Q3 2021:

- The current target is for the July 2021 International Edition to be the first release after the transition to Concrete Domains. This means that the RF2 package would be impacted as follows:
  - existing drug concept strength and count relationships inactivated +
  - existing strength and count attribute types will be inactivated, replaced with new ones using the same FSNs.
  - Inferred Relationship file changes:
- Stated OWL Axiom file changes:
  - existing drug concept axioms will be updated to use concrete values +
  - existing strength and count attribute types will be inactivated, replaced with new ones using the same FSNs.
- Additional Features in International Release
  - new separate concrete value relationship file will express these same attributes using numeric values
  - new attributes will be used, although they will have the same FSNs as the current attributes
  - MRCM will include new rows to indicate that the new attribute types are expected to take a concrete domain - specifically numbers - as target values.

If you can foresee any critical issues with the transition plans, or have any questions regarding any of these upcoming changes, please contact SNOMED International immediately at [support@snomed.org](mailto:support@snomed.org) with "Concrete Domains transition question" in the subject line.

## 2.22. SNOMED CT derived products

### 2.22.1. ICD-10 map

The SNOMED CT to the International Statistical Classification of Diseases and Related Health Problems, Tenth Revision (© World Health Organization 1994) 2016 Version map (SNOMED CT to ICD-10 Map) is included in the SNOMED CT International release as a Baseline. The SNOMED CT to ICD-10 Map was created to support the epidemiological, statistical and administrative reporting needs of SNOMED International member countries and WHO Collaborating Centers.

The SNOMED CT to ICD-10 Map is released in Release Format 2 (RF2) only. It is located in the file `der2_iisssccRefset_ExtendedMapFull_INT_20200731.txt`, which is in the Map folder under Refset, in each of the three RF2 Release Type folders.

The SNOMED CT to ICD-10 Map is released as Refset 447562003 [ICD-10 complex map reference set (foundation metadata concept)].

### 2.22.2. Content development activity summary

The map is a directed set of relationships from SNOMED CT source concepts to ICD-10 target classification codes. The SNOMED CT source domains for the MAP are limited to subtypes of 404684003 [clinical finding], 272379006 [event] and 243796009 [situation with explicit context]. The target classification codes are ICD-10 2016 release.

### 2.22.3. Mapped content for January 2021

The map provided for the January 2021 release has been updated, and now represents a complete map from SNOMED CT International release to ICD-10 2016 version.

- 1873 newly authored concepts have been added and mapped
- 3 new codes for special purposes have been added to the terminology browser in accordance with WHO guidelines:
  - U08 Personal history of COVID-19
  - U09 Post COVID-19 condition
  - U10 Multisystem inflammatory syndrome associated with COVID-19

We would welcome feedback on any issues that users of the map may detect when using the map. Issues should be submitted via [mapping@snomed.org](mailto:mapping@snomed.org)

### 2.22.4. Technical Guide Exemplars

The Technical Guide Exemplars document has now been moved from the International Edition release package to a Confluence page. This page can be found as part of the ICD-10 Mapping Technical Guide (see Appendix B), which is hosted here: <http://snomed.org/icd10map>

### 2.22.5. SNOMED CT to OWL conversion and classification

The repository containing the toolkit enabling simple SNOMED CT to OWL conversion and classification can be found here, including documentation on its use: <https://github.com/IHTSDO/snomed-owl-toolkit>

Please contact SNOMED International at [support@snomed.org](mailto:support@snomed.org) if you would like to provide any feedback on ways to extend and improve the new toolkit.

## 3. Technical notes

### 3.1. Known Issues

Known Issues are content or technical issues where the root cause is understood, and the resolution has been discussed and agreed but has yet to be implemented. This can be due to a number of reasons, from lack of capacity within the current editing cycle, to the risk of impact to the stability of SNOMED CT if the fix were to be deployed at that stage in the Product lifecycle.

For the current SNOMED CT International edition, the following Known Issues were identified, and agreed to be resolved in future editing cycles:

| Key      | Summary   | Description  |
|----------|---|--|
| ISRS-926 | RVF<br>Assertion failure:<br>805ab37c-33fa-45aa-876b-f86365a828c8 | <p>assertionUuid: "805ab37c-33fa-45aa-876b-f86365a828c8",<br/>assertionText: "Case-sensitive terms that share initial words also share caseSignificancelid value.",<br/>failureCount: 1,<br/>firstNInstances: [</p> <ul style="list-style-type: none"> <li>• {conceptId: "871803007", detail: "DESC: conceptid=871803007:has terms not sharing case-sensitivity."}</li> </ul> <p>KNOWN ISSUE: SNOMED CT Content Team confirmed that this is a false positive and <b>this</b> concept will therefore be permanently whitelisted for <b>this</b> particular assertion.</p>   |
| ISRS-928 | RVF<br>Assertion failure:<br>cc9c5340-84f0-11e1-b0c4-0800200c9a66 | <p>assertionUuid: "cc9c5340-84f0-11e1-b0c4-0800200c9a66",<br/>assertionText: "Terms that contain en-gb specific words are in the en-gb language refset.",<br/>failureCount: 1,<br/>firstNInstances:</p> <ul style="list-style-type: none"> <li>• conceptId: "1004006009", detail: "DESCRIPTION: id=4167389016: Synonym is preferred in the en-gb language refset but refers to a word that has en-us spelling: organization"</li> </ul> <p>KNOWN ISSUE: SNOMED International content team confirmed that this is a false positive, as the use of "organization" is within a Proper Noun, and therefore aligns with editorial policy. This issue will therefore be permanently whitelisted for <b>this</b> concept, for <b>this</b> assertion.</p>  |
| ISRS-930 | RVF<br>Assertion failure:<br>eff30fb0-7856-11e1-b0c4-0800200c9a66 | <p>assertionUuid: "eff30fb0-7856-11e1-b0c4-0800200c9a66",<br/>assertionText: "All language refset members inactivated in current snapshot must have been active in the previous release.",<br/>failureCount: 4,<br/>firstNInstances:</p> <ul style="list-style-type: none"> <li>• conceptId: "4230236010", detail: "Language Refset: id=88b3b15c-f415-4c53-8703-89c991ac4f2a is inactive but no active state found in previous release."</li> <li>• conceptId: "4230235014", detail: "Language Refset: id=98f48d37-8185-42a6-8282-bd9c30a460fd is inactive but no active state found in previous release."</li> <li>• conceptId: "4230235014", detail: "Language Refset: id=d88aa348-e06a-4172-bb5f-c1dfa7f30473 is inactive but no active state found in previous release."</li> <li>• conceptId: "4230236010", detail: "Language Refset: id=0d547b9f-657a-417b-a124-8c4af912388b is inactive but no active state found in previous release."</li> </ul> <p>KNOWN ISSUE: SNOMED International content team confirmed that these are false positives, due to the records having been created and then versioned in November 2020, in preparation for the Jan 2021 release. However, they were then subsequently inactivated within the same release cycle, in order to fix errors in the new content - changes were therefore made to concepts that are brand new to this release and haven't been Published yet. These 4 records can therefore be safely temporarily whitelisted for this assertion, as they will not re-occur in the next cycle.</p> |
| ISRS-931 | RVF<br>Assertion failure:<br>2b193a88-8dab-4d19-b995-b556ed59398d | <p>assertionUuid: "2b193a88-8dab-4d19-b995-b556ed59398d",<br/>assertionText: "New inactive states follow active states in the DESCRIPTION snapshot.",<br/>failureCount: 2,<br/>firstNInstances:</p> <ul style="list-style-type: none"> <li>• conceptId: "1017214008", detail: "DESCRIPTION: id=4230235014 is inactive but no active state found in the previous snapshot."</li> <li>• conceptId: "1017214008", detail: "DESCRIPTION: id=4230236010 is inactive but no active state found in the previous snapshot."</li> </ul> <p>KNOWN ISSUE: SNOMED International content team confirmed that these are false positives, due to the records having been created and then versioned in November 2020, in preparation for the Jan 2021 release. However, they were then subsequently inactivated within the same release cycle, in order to fix errors in the new content - changes were therefore made to concepts that are brand new to this release and haven't been Published yet. These 2 records can therefore be safely temporarily whitelisted for this assertion, as they will not occur in the next cycle.</p>   |
| ISRS-933 | Primitive<br>Stated<br>parents                                    | <p>Australia have reported the following potential issue with the modelling, which requires valid source concepts:</p> <p>"These concepts fail. I think the problem is their stated parent is primitive... and not a subtype of [433590000  Administration of substance via specific route (procedure)] http://snomed.info/id/433590000]</p> <ul style="list-style-type: none"> <li>• 427633002 Intravenous injection of vaccine (procedure)</li> <li>• 787016008 Administration of vaccine product containing only Influenza virus antigen in nasal dose form (procedure)</li> <li>• 871728006 Administration of vaccine product containing only live attenuated Salmonella enterica subspecies enterica serovar Typhi antigen in oral dose form (procedure)</li> <li>• 871899004 Administration of vaccine product containing only live attenuated Human alphaherpesvirus 3 antigen via subcutaneous route (procedure)</li> <li>• 572391000119109 Administration of vaccine product containing only Rabies lyssavirus antigen via intramuscular route (procedure)</li> <li>• 572431000119104 Administration of vaccine product containing only Salmonella enterica subspecies enterica serovar Typhi capsular polysaccharide Vi antigen via intramuscular route (procedure)</li> </ul>   |

- 626061000119109 Administration of pentavalent vaccine product containing only live attenuated Rotavirus antigen via oral route (procedure)
- 16292691000119104 Administration of vaccine product containing only inactivated whole Japanese encephalitis virus antigen (procedure)
- 16292731000119106 Administration of vaccine product containing only inactivated whole Japanese encephalitis virus antigen adsorbed via intramuscular route (procedure)

KNOWN ISSUE: The SNOMED CT Content Team have confirmed that the reason for this being reported as an issue is that all of these concepts use a DIRECT SUBSTANCE of <<Vaccine product as opposed to substance. This is technically not an error, however, as it is the "Administration of **product** via specific route". As the parent in question is a non-clinical grouper, there is no concern about the loss of this parent. Administration by a specific route can be easily handled using ECL. However, further investigation will be conducted into the classification of these and other concepts, with the aim to resolve any issues in future International Edition releases. These will therefore be temporarily whitelisted until they are resolved.

5 issues

## 3.2. Resolved Issues

Resolved issues are Known Issues which were not fixed as part of the previous release lifecycle, but which have now been resolved in the latest release. They can also be issues found during the Alpha and Beta testing of the current release, which were resolved before the final deployment of the associated Member release. Finally they can be issues which were reported or found during the testing phase, but which have been closed without any action taken.

The Resolved Issues for the current Snomed CT International edition can be found here:

| Key      | Summary   | Description  | Resolved    |
|----------|---|--|-------------|
| ISRS-806 | Invalid modelling of the due to relationship with an Organism | <p>Australia have reported the following potential issue with the modelling requiring valid destination concepts:</p> <ul style="list-style-type: none"> <li>• Modelling of this concept appear to be incorrect – 840444002[Dacryoadenitis due to Acanthamoeba keratitis (disorder)]</li> <li>• Specifically, the due to relationship with an Organism.</li> </ul> <p>RESOLUTION: The SNOMED CT Content Team have confirmed that this concept has been resolved in the January 2021 editing cycle, and will therefore be published in its refined state in the January 2021 International Edition.</p>   | 2021-Mar-02 |
| ISRS-813 | Beta release feedback from UK - Acne                          | <p><u>Beta release feedback from UK:</u></p> <p>"I would also personally question the clinical accuracy of this:<br/>88616000 Acne vulgaris (disorder)<br/>SAME_AS<br/>11381005 Acne (disorder)</p> <p>In respect of the Acne/Acne Vulgaris issue...</p> <p>Yes, the old 11381005 Acne (disorder) concept does indeed now have 'Acne vulgaris' as its preferred term...but this is just the same clinical faux pas being repeated twice.</p> <p>According to the new content, the taxonomy now says that (for example) all possible cases of:</p> <ul style="list-style-type: none"> <li>• 75867005 Acne rosacea, papular type (disorder)</li> <li>• 10954006 Tropical acne (disorder)</li> <li>• 13101006 Acne mechanica (disorder)</li> <li>• 42200001 Acne venenata (disorder)</li> </ul> <p>...are all also by abstraction invariably cases of 11381005 Acne vulgaris (disorder)</p> <p>...in the same way that all cases of e.g. Holt-Oram syndrome are also by taxonomic implication cases of cardiac arrhythmia.</p> <p>The normal clinical understanding is that Acne Vulgaris and all the other flavours of acne now classified beneath it are completely different diseases, with completely different pathophysiology, clinical presentation and treatments. The new taxonomy is stating that all flavours of Acne are instances of Acne Vulgaris, which is just wrong!</p> <p>"Acne Vulgaris" is classical teenage acne, partly genetically determined and testosterone driven, commoner in young males, with characteristic skin distribution that often includes the upper torso as well as the face and is treatable with e.g. long term oral antibiotics or topical retinoids. Sometimes sufficiently severe to be scarring.</p> <p>Rosacea is commoner in women over 30 and correspondingly relatively rare in teenagers. It rarely involves the upper torso, rarely leaves scarring, and doesn't normally respond particularly well to antibiotics or retinoids.</p> <p>Acne mechanica is a friction-induced skin irritation, so only appears wherever the skin is being pressed or rubbed, e.g. (topically at the moment) in a ring on the faces of many COVID-19 HCWs at the moment due to prolonged contact with the inside rubber seal of a PPE mask. The best and only required treatment usually is to stop wearing the item of apparel.</p> | 2021-Mar-02 |

Acne venenata is acne induced by (usually repeated) contact with cosmetics and so principally affects adult females. Again, the exanthem only appears wherever the cosmetic was applied, and the most effective treatment is to stop using the cosmetic.

RESOLUTION: Resolved in time for the January 2021 International Edition release.

|          |  |  |             |
|----------|--|--|-------------|
| ISRS-921 | Issue with Covid concept modelling   | <p>One of the Covid concepts needs to have its modelling updated, in line with new understanding on the virus:</p> <p>1017214008   Viral infection of bloodstream caused by Severe acute respiratory syndrome coronavirus 2 (disorder)</p> <p>RESOLUTION: Resolved in time for the January 2021 International Edition release, by inactivating 2 descriptions, and replacing with 3 new descriptions.</p>  | 2021-Mar-02 |
| ISRS-927 | RVF Assertion failure: c82246b1-a137-40c5-8653-554c9ce82c6b                        | <p>assertionUuid: "c82246b1-a137-40c5-8653-554c9ce82c6b",<br/>assertionText: "Active preferred terms for active concepts are unique in the same hierarchy",<br/>failureCount: 2,<br/>firstNInstances: [</p> <ul style="list-style-type: none"> <li>{conceptId: "420559008", detail: "Preferred term=L is duplicated in hierarchy (qualifier value)"}</li> <li>{conceptId: "258770004", detail: "Preferred term=L is duplicated in hierarchy (qualifier value)"}</li> </ul> <p>RESOLUTION: The SNOMED International Content team have investigated these potential duplicates (as part of the International Edition validation) and confirmed that they are all valid terms. These potential issues have therefore been permanently whitelisted (see <a href="#">ISRS-737</a>), and can be safely ignored with no action currently required.</p>  | 2020-Dec-02 |
| ISRS-929 | DROOLS Assertion failure: Active concepts must have at least one IS A relationship | <p>testType: "DROOL_RULES",<br/>assertionText: "Active concepts must have at least one IS A relationship.",<br/>failureCount: 1,<br/>firstNInstances: [</p> <ul style="list-style-type: none"> <li>{conceptId: "138875005", conceptFsn: "SNOMED CT Concept (SNOMED RT+CTV3)", detail: "Active concepts must have at least one IS A relationship."}</li> </ul> <p>RESOLUTION: SNOMED International Content Team confirmed that as this is the root concept (138875005 [SNOMED CT Concept (SNOMED RT+CTV3)] ) it is the only exception to this rule, and will therefore never have an IS_A relationship. The rule now appears to be running correctly, and so no editing changes are required - this one concept just needs to be manually whitelisted in all future validation runs.</p>  | 2020-Dec-02 |
| ISRS-932 | RVF Assertion failure: 1a4e40a9-cf14-4703-b206-9f2fbeb56c7f                        | <p>assertionUuid: "1a4e40a9-cf14-4703-b206-9f2fbeb56c7f",<br/>assertionText: "All active Refset records are valid.",<br/>failureCount: 2,<br/>firstNInstances:</p> <ul style="list-style-type: none"> <li>conceptId: "127862002", detail: "Reference component id:127862002 for refset id: 733073007 in owl expression refset must be valid."</li> <li>conceptId: "87837008", detail: "Reference component id:87837008 for refset id: 733073007 in owl expression refset must be valid."</li> </ul> <p>RESOLUTION: Resolved in time for the January 2021 International Edition release, by inactivating the two offending OWLExpression records.</p>   | 2021-Mar-02 |
| ISRS-934 | SPECIMEN SUBSTANCE 370133003 only modelled with valid destination concepts         | <p>Australia have raised the following query:</p> <p><u>SPECIMEN SUBSTANCE 370133003 only modelled with valid destination concepts</u></p> <p>There's 80 concepts failing, all appear to be using [Specimen substance] with an [object]</p> <p>For example:</p> <ul style="list-style-type: none"> <li>258627009 Cannula tip submitted as specimen (specimen):Specimen substance=Cannula, device (physical object)</li> </ul> <p>This was mentioned as an update in the MRCM and so it's technically legal now, however usually the 118170007 [Specimen source identity (attribute)] be used for this purpose? Australia were unable to find any actual discussion about this change except maybe this <a href="https://confluence.ihtsdotools.org/display/FHIR/Specimen+binding">https://confluence.ihtsdotools.org/display/FHIR/Specimen+binding</a>, or <a href="https://confluence.ihtsdotools.org/display/editorialag/2015-10-27+Meeting+Minutes%2C+p.3+Content+Model+Changes">https://confluence.ihtsdotools.org/display/editorialag/2015-10-27+Meeting+Minutes%2C+p.3+Content+Model+Changes</a> Discussions long ago suggested that technically it was the 'body fluid' on a device that was the specimen substance. Also note, the FSNs have substantially changed from Cannula tip (specimen) -&gt; Cannula tip submitted as specimen (specimen). This may not infer any change in meaning, and it's good that the concept didn't churn.</p> <p>RESOLUTION: The SNOMED International content team have confirmed that this is a valid MRCM change made in response to a request from the Observables group. Approximately 100 specimen concepts that use 118170007 Specimen source identity (attribute) to identify the object tested when they should use 370133003 Specimen substance (attribute) instead, have been identified. Refinements have been made to align with the change to the MRCM.</p> | 2021-Mar-02 |
| ISRS-    | OCCURREN   | Australian NRC reported the following:   | 2021-Jun-07 |

|          |  |  |             |
|----------|--|--|-------------|
| 935      | CE<br>(246454002)<br>- only<br>modelled<br>with valid<br>destination<br>concepts | <p><u>OCCURRENCE(246454002) - only modelled with valid destination concepts</u></p> <ul style="list-style-type: none"> <li>13169917021 Traumatic aniridia (disorder):Occurrence=Periods of life</li> </ul> <p>Technically this is legal MRCM, and Australia have updated their validation so it passes now. There may still be an issue with the content, in that the concept may not need to have this attribute, as it's a "nothing property". It's also the only instance of "Occurrence=Periods of life" in the whole of the terminology, which may be indicative of a problem. All other "Occurrences" use subtypes of "Periods of life" – which is what the original test was setup to verify. It would make sense on a grouper, but not this concept.</p> <p>KNOWN ISSUE: The SNOMED International content team have confirmed that the use of occurrence = 282032007 [Periods of life (qualifier value)] is allowable and not constrained by the MRCM because it might be used as a grouper. The template has more refined constraints so the inclusion of 282032007 [Periods of life (qualifier value)] as a value for occurrence could be avoided in future through use of the proposed template. The MRCM will be reviewed to see if it could be refined however this would require thorough analysis as there may be some use cases where this value is acceptable (such as for grouper concepts). The concept 231956007 [Traumatic aniridia (disorder)] will be remodelled for the July 2021 release. This issue will therefore be temporarily whitelisted until it's resolved.</p> <p>RESOLUTION: The SNOMED International content team have confirmed that 231956007 [Traumatic aniridia (disorder)] has been remodelled for July 2021 release, occurrence removed, and no further changes to the model are required - this ticket can therefore be closed as resolved.</p> |             |
| ISRS-936 | MRCM validation failures   | <p>Some additional MRCM failures have been found by running the MRCM validation against the inferred view as well as the stated view.</p> <p>KNOWN ISSUE: The SNOMED International content team have confirmed that these are valid issues, but do not require action in time for the January 2021 release. A number of the attributes require further discussion regarding changes to the MRCM rules in consultation with the Device project group. The issue with modelling is of no obvious clinical risk, and therefore all issues will be temporarily whitelisted until they are resolved - currently planned in time for the July 2021 International release with further enhancements to the validation rules requested.</p> <p>RESOLUTION: The SNOMED International content team have confirmed that this issue has now been resolved - this ticket can therefore be closed as resolved.</p>   | 2021-Jun-07 |
| ISRS-937 | Two updates to the associated refset for Jan 2021 release                        | <p>Whilst checking the traceability validation we found there are two updates to the associated refset. They normally should be done by inactivation and adding new entries.</p> <p>RESOLUTION: Changes confirmed to be intentional back-end fixes for <del>INFA-5581</del>. No action is therefore required, as this is proven to be a valid state.</p>   | 2020-Dec-07 |
| ISRS-938 | New COVID vaccination content to be added for the January 2021 release           | <p>SNOMED International received several requests related to new content to be added for the incoming COVID vaccines.</p> <p>Although the requests were received after the new content deadlines for the January 2021 Release, there is still an opportunity to include these Urgent changes in the final Release, due to them being low impact + low risk, but of extremely high importance.</p> <p>As we're expecting more vaccine-related requests, and potentially refinements to the original requests in early January 2021 (as vaccines are approved by regulators in multiple countries), we are not including this content in the 31st December 2020 Member Release, but instead will incorporate the final, reviewed content in the Production Release on 31st January 2021.</p> <p>If you would like to be involved in the review of this content, please get in touch with SNOMED International asap on <a href="mailto:info@snomed.org">info@snomed.org</a> .</p> <p>RESOLUTION: New vaccines content included in the final Production release of the January 2021 International Edition - please see the Release Notes for full details.</p>  | 2021-Mar-02 |
| ISRS-939 | Beta release content feedback from UKTC about O/E and inactivations              | <p>Feedback received regarding the inactivation of some "On Examination" prefixed content.</p> <p>RESOLUTION: Feedback was discussed by the SNOMED International Content Team and responses sent to the UKTC. <b>No changes to the content were required.</b></p>  | 2020-Dec-16 |
| ISRS-940 | Promoted Concepts were requested with the wrong ID's                             | <p>An ID mix-up was detected by termMed when they tested the Canadian extension in relation to the International member release.</p> <p>The CA Edition IDs that they requested to be retained were switched in their CRS template request, and so the wrong ID's were requested for each concept.</p> <ul style="list-style-type: none"> <li>28421000087109 Structure of right suprascapular region of back (body structure) </li> <li>28431000087106 Structure of left suprascapular region of back (body structure) </li> <li>28271000087107 History of peritoneal dialysis (situation) </li> <li>28281000087109 History of attention deficit hyperactivity disorder (situation) </li> </ul>   | 2021-Mar-02 |

RESOLUTION: The four invalid concepts have been "force deleted" from SNOMED CT January 2021 International Edition, removing the concepts plus all related components from the Member release content. The four concepts will then retain their status in the Canadian extension for now, being promoted again with the correct identifiers in the July 2021 International Edition.

However the relationship IS_A 763158003 [Medicinal product (product)] has been inactivated in the latest Vaccines work, and so it has effectively been created and inactivated within the same 20210131 release cycle (and was never active in a previous release). This is therefore an expected status and doesn't suggest any underlying issue with the content - no action is required.</p>   | 2021-Jan-21 |

## 3.2.1. Technical updates

### 3.2.1.1. RF2 package format

For future reference, the RF2 package convention dictates that it contains all relevant files, regardless of whether or not there is content to be included in each particular release. Therefore, the package contains a mixture of files which contain both header rows and content data, and also files that are intentionally left blank (including only a header record). The reason that these files are not removed from the package is to draw a clear distinction between files that:

- have been deprecated (and therefore removed from the package completely), due to the content no longer being relevant to RF2 in this or future releases, and
- happen to contain no data in this particular release (and are therefore included in the package but left blank, with only a header record), but are still relevant to RF2, and could therefore potentially contain data in future releases.

This allows users to easily distinguish between files that have purposefully been removed or not, as otherwise if files in option 2 above were left out of the package it could be interpreted as an error, rather than an intentional lack of content in that release.

### 3.2.1.2. Configuration file in the RF2 package, containing Release Metadata

A new file has been included since the July 2020 International Edition, containing metadata about the Release package itself. This has been created in conjunction with feedback from the community, and as such initially contains the following fields:

- effectiveTime
- deltaFromDate
- deltaToDate
- languageRefset(s)
- humanReadableLanguageRefset(s)
- licenceStatement

The file is in .JSON format, to ensure that it is both machine-readable and human-readable, and is named "**release\_package\_information.json**".

The metadata will be extended and refined going forward, in order to ensure that it contains the most useful information possible. If you have any ideas about any other useful information to include, please send them to [info@snomed.org](mailto:info@snomed.org), along with a business case explaining how the information would benefit stakeholders. Please be aware that this use case will then be assessed by SNOMED International, and the new metadata will only be included in the configuration file if the business case is strong enough.

### 3.2.1.3. New Refset Descriptor records

A reference set type has been created to give postcoordination implementations the option of storing expressions in RF2 format. A reference set of this type has been created for the "Canonical close to user form" and for the "Classifiable form" of expressions. Guidance on using these expressions will be provided during 2021.

Nine new records have therefore been added to the refsetDescriptor file for these new expression refsets. These do not correspond to actual refsets in the International Edition release package, they are being introduced in order to support the implementation of a postcoordinated expression repository:

- (UUID) 20210131 1 9000000000000012004 900000000000456007 1119417006 449608002 1119460002 0
- (UUID) 20210131 1 9000000000000012004 900000000000456007 1119468009 449608002 1119460002 0
- (UUID) 20210131 1 9000000000000012004 900000000000456007 1119468009 1119454002 1119437005 1

- (UUID) 20210131 1 9000000000000012004 900000000000456007 1119435002 449608002 1119460002 0

### 3.2.1.4. Members Release now Obsolete

***The December 31st Member Release has been changed in time for the final Production Release on 31st January 2021. The Member Release should therefore be considered obsolete and should not be used for anything but test purposes. As always then, the final Production Release should be used in all systems.***

The reason for the changes was as communicated, in order to include important COVID-19 Vaccines content in the January 2021 International Edition, that wasn't available until January itself. Please see section 2.2 of these Release notes for full details of these changes.

In addition, four concepts were submitted via the CRS for inclusion into the January 2021 release accompanied with the incorrect concept ID. During testing it was identified the following new concepts had concept ID that did not match the descriptions in the National extension from which they originated. Please see section 2.1 of these Release notes for full details of these changes.

### 3.2.1.5. Concrete Domains Technical Preview

A technical preview of the impending Concrete Domains changes (currently planned for the July 2021 International Edition) will be published in February 2021, but in line with the January 2021 International Edition. It will contain drug concept strengths and counts expressed as concrete values in a new Relationships file. This is currently planned to be a full RF2 International Edition package (as opposed to a standalone Delta file containing Concrete Domains), containing all International content in addition to the new Concrete Domains Relationship file (ie) it will comprise the January 2021 International Edition release *as if we had already transitioned to Concrete Domains*, as a preview of what the final Release package will look like when the transition is complete.

### 3.2.1.6. Early visibility of impending change in the July 2021 International edition

Please see the following page for details of all upcoming changes planned for July 2021 and beyond: <https://confluence.ihtsdotools.org/display/RMT/July+2021+Early+Visibility+Release+Notice+-+Planned+changes+to+upcoming+SNOMED+International+Release+packages>

### 3.2.1.7. Document links

All links provide information that is correct and current at the time of this Release. Updated versions may be available at a later date, but if so these will need to be requested from the relevant SNOMED International teams.

**NOTE:** To access any of the links in the pdf document, please visit the Release Notes @ <https://confluence.ihtsdotools.org/display/RMT/SNOMED+CT+January+2021+International+Edition+-+SNOMED+International+Release+notes>
