

Body Structure

Definition	Examples
Includes Anatomical structures and Morphologic abnormalities (subtype of body structure)	<p>Body structure</p> <ul style="list-style-type: none">38033009 Amputation stump (body structure) 91134007 Mitral valve structure (body structure) <p>Morphologic abnormality</p> <ul style="list-style-type: none">189955008 Biopsy wound (morphologic abnormality) 31470003 Adenosarcoma (morphologic abnormality) <p>Cell</p> <ul style="list-style-type: none">250293008 Agranular white blood cell (cell) 57184004 T lymphocyte (cell) <p>Cell structure</p> <ul style="list-style-type: none">4897009 Cell membrane, prokaryotic (cell structure) 362293000 Entire axon (cell structure)

The body structure domain includes anatomical structures, as well as morphologic abnormalities, as follows:

- Body structure (body structure)
 - Anatomical or acquired body structure (body structure)
 - Anatomical organizational pattern (body structure)
 - Anatomical site notations for tumor staging (body structure)
 - Body structure, altered from its original anatomical structure (morphologic abnormality)
 - Nonspecific site (body structure)
 - Normal anatomy (body structure)
 - Topography not assigned (body structure)
 - Topography unknown (body structure)

Tumor staging

Concepts under 258331007 | Anatomical site notations for tumor staging (body structure)| require review and reallocation.
