

# SNOMED CT Implementation Showcase 2012

## Program with links to Presentations or Abstracts

|                                                                                                                           |              |
|---------------------------------------------------------------------------------------------------------------------------|--------------|
| <b>Keynote Presentations</b>                                                                                              |              |
| Evolution, survival, revolution and growth: An everyday story of terminology folk                                         | Presentation |
| Improving the health care system with eHealth – the Swedish case                                                          | Presentation |
| <b>Resources to Support Implementers</b>                                                                                  |              |
| Documentation and Resources to Support SNOMED CT Implementation                                                           | Presentation |
| Review of training and other related materials for the Implementation of SNOMED CT                                        | Presentation |
| <b>Practical Use Cases</b>                                                                                                |              |
| A UMLS and SNOMED CT-encoded differential diagnosis time-series knowledge base for self-administered patient interviews   | Abstract     |
| Implementation of SNOMED CT in Quality Measures                                                                           | Presentation |
| Strategies to Improve Problem List Management within Clinical EHR Workflow                                                | Presentation |
| <b>European Projects</b>                                                                                                  |              |
| epSOS make sense of Cross border Health care                                                                              | Abstract     |
| SNOMED CT mapping in the epSOS project                                                                                    | Abstract     |
| Semantic Interoperability for Health Network (SemanticHealthNet)                                                          | Abstract     |
| <b>Clinical Specialties</b>                                                                                               |              |
| A SNOMED CT linked diagnosis coding scheme for European Renal Medicine                                                    | Presentation |
| SNOMED CT in Anatomic Pathology                                                                                           | Presentation |
| <b>Laboratory Medicine</b>                                                                                                |              |
| Meeting terminology requirements for order entry and result reporting                                                     | Presentation |
| UK National Laboratory Medicine Catalogue                                                                                 | Presentation |
| Canadian Experience Supporting the Implementation of SNOMED CT for the Reporting of Microbiology Laboratory Result Values | Presentation |
| <b>Browsers and Searching</b>                                                                                             |              |
| Searching SNOMED CT                                                                                                       | Abstract     |
| Terminology Explorer                                                                                                      | Presentation |
| <b>Terminology Services</b>                                                                                               |              |
| SNOMED CT and Common Terminology Services (CTS2)                                                                          | Abstract     |
| Our experience developing a terminology server                                                                            | Presentation |
| <b>Data Entry</b>                                                                                                         |              |
| Using SNOMED CT to code free text in the clinical interface                                                               | Abstract     |
| Freedom of Clinical Expression versus Record Standardization - Having Your Cake and Eating It                             | Presentation |
| <b>EHR Design</b>                                                                                                         |              |
| An integrated Expression Repository EHR system                                                                            | Presentation |
| <b>Terminology Binding</b>                                                                                                |              |
| The Logical Model Designer - Binding Information Models to Terminology                                                    | Presentation |

|                                                                                                                     |              |
|---------------------------------------------------------------------------------------------------------------------|--------------|
| Implementing post-coordinated SNOMED CT bindings using an interface terminology in clinical data capture forms      | Presentation |
| <b>Retrieval and Queries</b>                                                                                        |              |
| Semantic Query                                                                                                      | Abstract     |
| Leveraging SNOMED CT in Healthcare Analytics                                                                        | Presentation |
| <b>Decision Support</b>                                                                                             |              |
| Clinical Decision Support Using openEHR Archetypes and SNOMED CT                                                    | Presentation |
| Development of a SNOMED CT based, national, centralized medication decision support system                          | Presentation |
| <b>Interoperability</b>                                                                                             |              |
| Planning for adoption of SNOMED CT in a Health Information Exchange                                                 | Presentation |
| <b>Mapping to Classifications</b>                                                                                   |              |
| How the SNOMED CT to ICD-10 Map facilitated the map to a national extension of ICD-10                               | Presentation |
| Transitioning from an IHTSDO SNOMED CT to ICD-10 Mapping Project to the IHTSDO Mapping Service                      | Presentation |
| Progress report on the IHTSDO/Wonca Family/General Practice Refset and ICPC-2 mapping project                       | Presentation |
| <b>Data Migration</b>                                                                                               |              |
| Mapping Legacy Terms to SNOMED CT - Challenges and Lessons Learned                                                  | Presentation |
| Mapping legacy termsets to SNOMED CT: Experiences and outcomes, tools and guidance                                  | Abstract     |
| Migrating post-coordinated SNOMED CT between systems: a case study converting a GE electronic health record to Epic | Presentation |
| <b>Translation</b>                                                                                                  |              |
| IHTSDO support for translation                                                                                      | Presentation |
| <b>Content Development</b>                                                                                          |              |
| IHTSDO Content Development process - moving forwards                                                                | Presentation |
| <b>Description Logic</b>                                                                                            |              |
| Semantic Annotations                                                                                                | Presentation |
| Negation, Disjunction and Union Set Enhancement for the IHTSDO Workbench                                            | Abstract     |
| <b>Extension Management</b>                                                                                         |              |
| Using Snow Owl to Maintain Singapore's SNOMED CT Extension and Drug Dictionary                                      | Presentation |
| Integrating SNOMED CT-AU and the Australian Medicines Terminology (AMT)                                             | Presentation |
| <b>Reference Sets</b>                                                                                               |              |
| Canadian Experience Developing Primary Care Reference Sets                                                          | Presentation |
| <b>Education</b>                                                                                                    |              |
| IHTSDO Quality Framework - sharing of practice across the community                                                 | Presentation |
