

5.5. Display Navigation Results Effectively

Results navigation is useful feature for search browsers to have in addition to the conventional display of search results (see [5.1. Order Search Results Rationally](#) and [5.4. Rationalize Search Results by Subsumption Checking](#)). The decision to design navigation results in browser may depend on space availability in the application's user interface. This sub-section describes two different types of hierarchies for browsing search results.

- [5.5.1. Using the Subtype Hierarchy](#)
- [5.5.2. The Challenge of Subtype Navigation](#)
- [5.5.3. Using the Navigation Hierarchy](#)
