Workflow Service

Overview

The workflowservice is responsible for operations related to managing workflow.

Internal API - WorkflowServiceJpa (extends TranslationServiceJpa)

Lower level calls of the internal API include:

- Add/get/remove/update/find tracking record(s)
- Add feedback
- Get workflow handlers and paths
- Perform workflow actions

REST API - WorkflowServiceRest

The public facing methods of the workflow service include:

- Find assigned/available concepts
- Find assigned/available refsets
- Find non release process translations
- Add feedback
- Perform workflow action and batch actions
- Get workflow config
- Get workflow paths
- Get tracking record for refset
