

Task View - Taxonomy

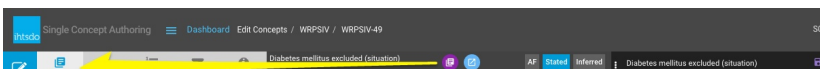

Steps

From various components of the

Authoring Platform a  **View in Taxonomy** button can be used to show a concept's position in the taxonomy. Selecting the **View in Taxonomy** button will load the concept in the Taxonomy pane.

Note: only one concept can be viewed at a time and selecting a different concept will replace the Taxonomy tree with that of the newly selected concept.

Reference

The screenshot shows the 'Single Concept Authoring' interface. On the left, a sidebar contains a 'View in Taxonomy' button (represented by a document icon). A yellow arrow points from this button to the 'Diabetes mellitus excluded (situation)' concept in the main taxonomy tree. The taxonomy tree shows a hierarchy: 'SNOMED CT Concept (SNOMED RT+CTV3)' -> 'Situation with explicit context (situation)' -> 'Finding with explicit context (situation)' -> 'Clinical finding absent (situation)' -> 'Disorder excluded (situation)' -> 'Diabetes mellitus excluded (situation)'. The right pane displays the 'Diabetes mellitus excluded (situation)' concept details, including its FSN (Diabetes mellitus excluded), SNY (us: P gb: P), and its relationships to other concepts like 'Disorder excluded (situation)', 'Finding context (attribute)', 'Known absent (qualifier value)', 'Subject relationship context (attribute)', and 'Subject of record (person)'.
