How do I detach a template?

Steps	Reference
To detach a template select the Detach Template button. The concept will then regain all unconstrained editing functions.	Image: State Intervent Image: State Intervent Image: State Image: State </td

When can a template be applied to a CRS concept?

The Apply Template button is only presented when there are templates available for the hierarchy of the selected concept. In International Authoring Platform Version 2.2.0, we have templates for the situation, procedure and disorder hierarchies. The Apply Template button is not shown for concepts in other hierarchies as the list of available templates would be empty. As templates get added for other hierarchies in subsequent releases, the range of availability will expand.
