Items	Proposed improvement	Planned Release date (*this is provisional only and is subject to change)
1	<p><u>Browse Content Changes for the January 2020 Release</u></p> <p>The daily build is available to review changes made to content for the January 2020 release https://dailybuild.ihtsdotools.org/</p> <p>Forthcoming concept inactivations, new concepts and changes to existing concepts can be reviewed using the tab 'Daily build.'</p>	January 2020 International Release
2	<p><u>Revision of IS A relationships for anatomy concepts</u></p> <p>The new anatomy concept model implemented the enhanced Description Logic features, e.g. reflexive and transitive properties, additional axioms, for consistent logical modeling. The inferred IS A relationships from the OWL anatomy ontology have been reviewed and the changes have been implemented in the production. The potential impact to other hierarchies, such as disorders, procedures, observables, situations etc are also reviewed as part of the project.</p> <p>The revision of cardiovascular, digestive and genitourinary systems have been included in the July 2019 release. The respiratory, nervous, integumentary, endocrine, immune, sensory organs, lymphoreticular, hematological systems will be revised in the January 2020 International release.</p> <p>Information about revision of IS_A relationships can be viewed here: https://confluence.ihtsdotools.org/display/IAP/Revision+of+IS-A+relationships+for+anatomy</p> <p>In the July 2019 release changes were made to 113345001 Abdominopelvic structure (body structure) whilst retaining the 'synonyms' of Abdomen and Abdominal structure based on the most common usage. Further work is currently underway to more explicitly describe and define concepts relating to regional anatomy of the abdomen and pelvis with changes to content due to be implemented after a period of consultation.</p>	January 2020 International Release July 2020 International Release
3	<p><u>MRCM Changes</u></p> <p>Please see: MRCM changes in the January 2020 release</p>	January 2020 International Release
4	<p><u>Quality Initiative</u></p> <p>Information about the project can found here - Quality Initiative - Progress</p> <p>Note: There are changes to the Service Level Agreement for the CRS as a result of the Quality Initiative: https://www.snomed.org/SNOMED/media/SNOMED/documents/Early-Visibility-of-Changes-to-Service-Level-Agreement-International-Content-Request-Service-(CRS).pdf</p>	January 2020 International Release
5	<p><u>Changes to Case Sensitivity</u></p> <p>Over 31,000 descriptions have been reviewed and approximately 5,402 descriptions across 2806 concepts have had their case significance settings corrected as appropriate. The changes are across all SNOMED CT hierarchies but in particular disorder concepts (1774), procedure (978) and qualifier values (736).</p> <p>The Editorial Guidance on case significance related to descriptions containing numeric values and special characters has been updated for the January 2020 release.</p>	January 2020 International Release

6	<p><u>Planned changes to 'Co-occurrent and due to' pattern</u></p> <p>During the implementation of the new Description Logic features a conflict was uncovered between the modeling of 'Co-occurrent and due to' and General Concept Inclusions (GCIs). This has resulted in the need to reconsider the modeling of 'Co-occurrent and due to' and update the Editorial Guide for this area.</p> <p>There are a number of new concepts in the January 2019 release that are based upon the existing guidance for 'Co-occurrent and due to'. The plan is to update the Editorial Guide and all concepts that are currently modeled as 'Co-occurrent and due to' starting from the July 2019 release.</p>	January 2020 International Release and future releases
7	<p><u>WAS_A</u></p> <p>Inactivation reason of LIMITED/WAS_A is not allowed for any new content inactivations after the July 2018 release. The WAS_A association refset has not been updated thereafter.</p> <p>At the Editorial Advisory Group meeting in April 2019, agreement was reached to discontinue the maintenance of WAS_A relationships when inactivating concepts that have a historical association to an inactive concept. When changes are made to a historical relationship for a concept that was previously inactivated using WAS_A, effort will be made to assign a new historical relationship that facilitates traceability of the concept (e.g. DUPLICATE or AMBIGUOUS) as opposed to NON-CONFORMANCE TO EDITORIAL POLICY.</p> <p>Existing WAS_A relationships will be inactivated in a future release once a plan for batch reassignment of historical relationships has been developed. Until then, SNOMED International will not continue to use or maintain WAS_A relationships.</p>	January 2020 International Release and future releases
8	<p><u>Known Content Issues July 2019 Release</u></p> <p>Approximately 149 text definitions are missing either a US or GB spelling variation. These are all legacy issues that will be rectified in the January 2020 release.</p> <p>A small set of disorder concepts have been identified with descendants that have a semantic tag of clinical finding. A further small set of concepts have been identified that have a semantic tag of disorder but are not descendants of 64572001[Disease (disorder)]. These concepts are all legacy issues that will be rectified in the January 2020 release.</p> <p>Release validation rules have been enhanced to prevent recurrence of legacy issues for future content additions.</p>	January 2020 International Release
9	<p><u>Changes for 'On examination' (O/E) and 'Complaining of' (C/O) concepts</u></p> <p>Jan 2020 release:</p> <ul style="list-style-type: none"> • Addition of approximately new 230 concepts to cover content identified (to date) as having no base concept. • Continued analysis of O/E and C/O content to determine replacement content (current suitable concept, new or no value in replacing) <p>July 2020 release:</p> <ul style="list-style-type: none"> • Addition of any further required content • Inactivation of the O/E and C/O content (Batch change) for return to the UK. <p>Content being inactivated will use the reason - component moved elsewhere.</p> <p>Note: some concepts will not have a replacement concept as they are groupers. For example: On examination - sign irregular (finding) On examination - neurological reflex (finding)</p>	January 2020 International Release July 2020 International Release
10	<p><u>Inactivation of 33359002 Degeneration (morphologic abnormality) </u></p> <p>In order to distinguish the degenerative process from the structure, 33359002 Degeneration (morphologic abnormality) has been inactivated as a DUPLICATE, SAME AS 107669003 Degenerative abnormality (morphologic abnormality) .</p> <p>All morphologies in the disorder hierarchy have been replaced accordingly.</p> <p>107669003 Degenerative abnormality (morphologic abnormality) </p> <p>33359002 Degeneration (morphologic abnormality) </p>	January 2020 International Release
11	<p><u>Inactivation of 23583003 Inflammation (morphologic abnormality) </u></p> <p>In order to distinguish inflammatory process from structure, 23583003 Inflammation (morphologic abnormality) has been Inactivated as DUPLICATE, SAME AS 409774005 Inflammatory morphology (morphologic abnormality) .</p> <p>All concepts in the Inflammatory disorder hierarchy have been remodeled accordingly.</p>	January 2020 International Release

12	<p><u>ICD-O project work</u></p> <p>IACR have released ICD-O-3.2 as a listing of all new additions, changes and revisions to ICD-O-3.1 in Excel format. The new version, ICD-O-3.2, is recommended for use from 2020. ICD-O-3.2 is not yet available online or in book format. In preparation for the update, the changes have been divided into types and are being investigated/addressed in the ICD-O-3.2 update project. The priority is being given to those that have an impact on clinical safety, e.g., changes of behaviour (benign, malignant etc.) and adding new content for SNOMED CT morphologies, this refers to the 400177003 Neoplasm and/or hamartoma (morphologic abnormality) hierarchy.</p> <p>The descriptions with [obs] have been inactivated as outdated because they are artefacts of descriptions from the ICD-O-3 print version for their history tracking.</p> <p>The maps to ICD-O-3.1 are being updated only for error correction purposes for the January 2020 release. The maps to ICD-O-3.2 are out of scope for the January 2020 release and are planned for a future release.</p>	January 2020 International Release
13	<p><u>Over the Counter</u></p> <p>Concepts referring to "over the counter" status have been inactivated.</p> <p>Concepts referring to regulatory status or characterization (e.g. over the counter) are out of scope for the International Release since the meaning may vary by jurisdiction and is not consistent internationally.</p>	January 2020 International Release
14	<p><u>Antigens Required for the Vaccine Products</u></p> <p>As a Vaccine project work item and based on requests submitted mutually by Argentina and Canada, new antigen concepts (~150) have been added to the Substance hierarchy to be used in the modeling of vaccine products in a future release.</p>	January 2020 International Release
15	<p><u>Vaccine Poisoning</u></p> <p>Concepts referring to vaccine poisoning have been inactivated from the International release and moved to the NHS extension per their request.</p> <p>The notion of vaccine poisoning has persisted in ICD 10 under T50 but it is not included in ICD-11; the poisoning aspect seemingly referred to the adjuvants and carriers that are included in the vaccines as opposed to the biological component itself.</p>	January 2020 International Release
16	<p><u>Traumatic Dislocation</u></p> <p>Traumatic dislocation concepts are being remodeled according to the new representation using DUE TO "Traumatic event".</p> <p>This work has been partially completed for the Jan 2020 release, resulting in the remaining subhierarchies moving from under "Traumatic dislocation of joint" to "Dislocation of joint". These remaining subhierarchies will be remodeled for the July 2020 release.</p>	<p>January 2020 International Release</p> <p>July 2020 International Release</p>
17	<p><u>Revision of 298180004 Finding of range of joint movement (finding) </u></p> <p>The concepts under the subhierarchy 298180004 Finding of range of joint movement (finding) are being remodeled to represent the finding site of <<785818007 Structure of joint region (body structure) instead of <<39352004 Joint structure (body structure) .</p> <p>Range of movement of a joint region can be impacted by both bone and soft tissues, therefore the use of 39352004 Joint structure (body structure) was too restrictive and caused issues in other areas of the terminology. These changes will be made over the course of two releases due to the number of affected concepts.</p>	<p>July 2019 International Release</p> <p>January 2020 International Release</p>

18	<p><u>Planned changes to Implantation and Insertion procedures</u></p> <p>Work commenced on content tracker IHTSDO-175</p> <div data-bbox="236 304 1121 474" style="border: 1px solid orange; padding: 10px; margin: 10px 0;">  IHTSDO-175 - Jira project doesn't exist or you don't have permission to view it. </div> <p>Ongoing structural changes for the Procedure concepts related to the content tracker:</p> <p>It was agreed that not all Insertion and Implantation procedures are surgical.</p> <p>As a result, further work in the hierarchy under 129284003 [Surgical action (qualifier value)] has been undertaken for the January 2020 release and this includes:</p> <ul style="list-style-type: none"> Reactivation of 129338005 [Surgical implantation - action (qualifier value)] Addition of a new concept 788288006 [Surgical reimplantation - action (qualifier value)] Remodel of 'Reimplantation procedures' replaced METHOD = 129337000 [Reimplantation - action (qualifier value)] with new 788288006 [Surgical reimplantation - action (qualifier value)]. <p>Work on this project will continue for future releases after January 2020.</p>	January 2020 International Release
19	<p><u>Replacement of the Stated Relationship files with the new OWL Axiom refset files</u></p> <p>A set of documentations has been developed to support the Logic Profile Enhancements.</p> <ul style="list-style-type: none"> • SNOMED DL Profile Enhancements • SNOMED CT Logic Profile Specification • SNOMED CT OWL Guide (OWL Refsets specification) • Snomed OWL Toolkit - https://github.com/IHTSDO/snomed-owl-toolkit • Classifying SNOMED CT using the Snomed OWL Toolkit - https://youtu.be/-91egY9mJqA • Creating an OWL file containing SNOMED CT - https://youtu.be/sfFbMMioA_4 <p><i>For any questions, please contact SNOMED International at support@snomed.org with “OWL Axiom refset files implementation question” in the subject line.</i></p>
