

Report Generation

Overview

Describes the automated process for generating reports.

Details

Reports for all projects are created on a nightly basis. The reports generated depend on which reports are attached to each project (see [Managing Reports and QA Checks](#)).

The source code for the dailyReports.csh script is in the config project for the prod deployment - config/prod/src/main/resources/bin.

Automation

The report generation wrapper script (see the next section) is automatically run via the crontab application. A sample cron job for running reports nightly at 12AM is shown below:

```
#
# Minute      Hour      Day of Month      Month      Day of Week
#
0      0      *      *      *      csh /home/ihtsdo/config/bin/dailyReports.csh > /home/ihtsdo/logs
/dailyReports.log
```

Manually Running the Report Generation Wrapper Script

The wrapper script loadDelta.csh can be run by:

```
cd ~/config/bin
csh qaCron.csh > [desired log file name]
```
