

# "Moving forward with Genomics: Putting the pieces together (201762)"

## ABSTRACT:

SNOMED International is committed to supporting Genomics through the development of SNOMED CT, to ensure that it is fit for the purpose. Genomics, and the development of Precision Medicine, will require a clinical terminology to adapt to new ways of working. This will involve the updating of SNOMED CT content, and the development of supporting products to link to Genomics classifications and terminologies already in use. The central objective of the work is to develop links between the existing Genomics knowledge sources, and **NOT** to duplicate Genomics terminologies within SNOMED CT. The session will explore the proposed direction of travel, and how this will be delivered.
