I'm working through the adverse airway event terminology requests following the meeting in Bratislava.

A couple of questions for consideration;

1) Have not found much to help with definitions for "difficult supraglottic airway device insertion" and "Failed supraglottic airway device insertion". Any thoughts, suggestions, suitable references please let me know.

2) Emergency Front of neck access - are there any other procedures to include as well as tracheostomy and cricothyroidotomy?
