## Additional Notes

This is the first scheduled maintenance release of 2018, focused on resolving legacy backlog issues and technical debt accrued through previous releases for the International and Managed Service Authoring platforms.

A prioritised MRCM update ([Version 1.20](#)) for the International Authoring Platform was also deployed with this release. An MRCM update ([Version 1.16](#)) was also deployed for the Managed Service, to align with content dependencies following versioning for the latest public release of SNOMED CT (January 2018). Projects should be rebased, and then any current tasks rebased from the project to pick MRCM changes. Once the project has been rebased, new tasks within that project will inherently use the updated MRCM rules.

Please note the edit panel `Task Details` context tab now presents a new button: `Begin Promotion Automation`. This invokes chained automation of the `rebase-classify-promote` process - if no action is needed then it will proceed to automatically promote the task to the project. If a review has not been completed, the usual promotion warning will be presented - choosing `Promote Anyway` will resume the automated process, and `Return to Task` will stop the automated process. If a rebase is required it will invoke that as if the `Rebase` button was pressed and stop the flow until that is resolved. If rebase is not needed, it will then automatically invoke a classification as if the `Classify` button was pressed and stop the flow until that is resolved. If no classification results are found the task will then be automatically promoted as if the `Promote This Task to the Project` was pressed.

There is a known issue in this release if the author navigates away from the rebase screen after starting a project rebase, which results in the rebase not completing - the simple workaround is to stay on the rebase screen until it completes. Task rebases are not affected.

## Release Overview - Demo (zoom call recording)

## Module versions in this deployment

Module	Version	Deployment notes
Authoring-Services (API)	5.5.1	unchanged
Authoring-UI	2.8.12	new
Classification-Service (International)	1.1.6	new
Drools Rules	1.17	new
MRCM Rules (International)	1.20	new
MRCM Rules (Managed Service)	1.16	new
Orchestration Service	1.37.1	unchanged
SNOMED Templates	1.2.1	unchanged
Template Service (API)	1.4.3	unchanged
Terminology Server	5.11.6	new
Traceability Service	1.1.1	unchanged
TS Browser	0.20	new

Related dependencies for information

Module	Version	Info/context notes
CIS	1.2.4	unchanged
Identity Management Service (IMS)	1.2.1	unchanged
RVF-API	1.3.8	new
SRS-API	1.2.15	unchanged
