

Clinical Use Cases

The adoption of SNOMED CT by clinicians is essential to the success of SNOMED CT. To support this work, SNOMED international is looking to develop a library of documented use cases, where SNOMED CT is being used by clinicians and clinical groups. The documentation follows a template approach allowing ease of reading, and also to ensure that all the newark details are included in the documentation.

The standard headings are as follows:

- Name/Organisation
- Clinical domain
- Executive summary
- Stakeholders
- Scope
- Use case description
- Existing state
- New state
- Details of experience of using SNOMED CT
- Additional information

[Use case review library \(with summaries\)](#)

Additionally, the UK Terminology Centre provides a library of SNOMED CT Use Cases - https://hscic.kahootz.com/connect.ti/t_c_home/viewcontent?contentid=301171&done=CONCreated

Documented clinical use cases
