

Task View - Taxonomy

Steps	Reference
<p>From various components of the Authoring Platform a  View in Taxonomy button can be used to show a concept's position in the taxonomy. Selecting the View in Taxonomy button will load the concept in the Taxonomy pane.</p> <p>Note: only one concept can be viewed at a time and selecting a different concept will replace the Taxonomy tree with that of the newly selected concept.</p>	 <p>The screenshot displays the 'Single Concept Authoring' interface. On the left, a 'Taxonomy' pane shows a hierarchical tree of concepts, with 'Diabetes mellitus excluded (situation)' selected. The central area shows a concept map for this selected concept, including relationships like 'is a (attribute)', 'Finding context (attribute)', and 'Subject relationship context (attribute)'. On the right, a table lists related concepts and their relationships, such as 'Diabetes mellitus excluded (situation)', 'Diabetes mellitus excluded', 'Is a (attribute)', 'Finding context (attribute)', and 'Subject relationship context (attribute)'.</p>
