

SNOMED CT canonical CodeSystem resource

The FHIR specification has an incomplete canonical CodeSystem resource at <http://build.fhir.org/codesystem-snomedct.html> (or the earlier / published version: <https://www.hl7.org/fhir/codesystem-snomedct.html>)

This is something SNOMED International should really take ownership of, complete it, host it and keep it up to date...but obviously this group can help with all of that (except the hosting!).

I've included a table below which indicates the elements and their values in the current resource. The other thing to consider is the HTML rendering and what it should say, the current one you can see at <https://www.hl7.org/fhir/codesystem-snomedct.html> is in the current resource as generated text from the resource.

Ideally this should be hosted at <http://snomed.info/sct> and behave as a proper FHIR endpoint (e.g. respond appropriately to JSON and XML accept headers).

Please comment on the appropriateness of the current values and suggested changes.

Element	Value	Discussion					
id	snomedct	Specified by individual server, so we could leave blank here.					
url	http://snomed.info/sct	We'd expect this to redirect to the most recent international release.					
version		<p>This probably should be a specific URI to the particular edition/version but not defined in the Canonical form.</p> <p>Suggest we mandate this field if this document is specifying a template. RH had concerns about this since concepts couldn't then be referred between different versions. Note that the context here is an instance of a Code System resource from at Term Server perspective, not individual concepts as used a medical record where the SCTID plus description provides meaning.</p>					
identifier	<table><tr><td>system</td><td>urn:ietf:rfc:3986</td></tr><tr><td>value</td><td>urn:oid:2.16.840.1.113883.6.96</td></tr></table>	system	urn:ietf:rfc:3986	value	urn:oid:2.16.840.1.113883.6.96	This is the SNOMED OID used in other specifications eg CDA.	
system	urn:ietf:rfc:3986						
value	urn:oid:2.16.840.1.113883.6.96						
name	SNOMED CT	While this is the canonical value, each server would specify the particular edition they're making available.					
title	SNOMED CT (all versions)	Not required?					
status	active						
experimental	false						
publisher	IHTSDO	Change to SNOMED International					
contact	<table><tr><td rowspan="2">telecom</td><td>system</td><td>url</td></tr><tr><td>value</td><td>http://ihtsdo.org</td></tr></table>	telecom	system	url	value	http://ihtsdo.org	Changes to snomed.org
telecom	system		url				
	value	http://ihtsdo.org					
description	SNOMED CT is the most comprehensive and precise clinical health terminology product in the world, owned and distributed around the world by The International Health Terminology Standards Development Organisation (IHTSDO).	<input checked="" type="checkbox"/> Peter G. Williams check current text

"SNOMED" and "SNOMED CT" are registered trademarks of the IHTSDO http://www.ihtsdo.org/snomed-ct/get-snomed-ct	<input checked="" type="checkbox"/> Peter G. Williams check current text. Next release will take year up to 2019. That URL is now https://www.snomed.org/snomed-ct/get-snomed					
caseSensitive	false	Definition of element here is "If code comparison is case sensitive" which because SCTIDs are numeric, it's not.					
hierarchyMeaning	is-a	Suggest improving the documentation for this element, is somewhat ambiguous. "Properties of parent apply to child" is certainly true.					
compositional	true	"True If code system defines a post-composition grammar."					
versionNeeded	false	"This flag is used to signify that the code system has not (or does not) maintain the definitions, and a version must be specified when referencing this code system."					
content	not-present	We're not expecting to include all of SNOMED-CT in this resource.					

filter	<table><tr><th>code</th><th>description</th><th>operator</th><th>value</th></tr><tr><td>concept</td><td>Filter that includes concepts based on their logical definition. e.g. [concept] [is-a] [x] - include all concepts with an is-a relationship to concept x, or [concept] [in] [x]- include all concepts in the reference set identified by concept x</td><td>is-a in</td><td>A SNOME D CT code</td></tr><tr><td>expression</td><td>The result of the filter is the result of executing the given SNOMED CT Expression Constraint</td><td>=</td><td>A SNOME D CT ECL expression (see ecl)</td></tr><tr><td>expressions</td><td>Whether post-coordinated expressions are included in the value set</td><td>=</td><td>true or false</td></tr></table>	code	description	operator	value	concept	Filter that includes concepts based on their logical definition. e.g. [concept] [is-a] [x] - include all concepts with an is-a relationship to concept x, or [concept] [in] [x]- include all concepts in the reference set identified by concept x	is-a in	A SNOME D CT code	expression	The result of the filter is the result of executing the given SNOMED CT Expression Constraint	=	A SNOME D CT ECL expression (see ecl)	expressions	Whether post-coordinated expressions are included in the value set	=	true or false	<p>RH notes that the distinction between plural and not is subtle in text and substantial in effect.</p> <p>Could use "constraint" for the first instance. However, is likely already in use. ML confirms and in fact this field was previously called "constraint".</p> <p>"PostCoordination" a suggested alternative for 2nd which is the more problematic of the two.</p> <p>ML: Is "expressions" more relevant to an expansion profile? PW: Changing "are" to "should be" would make intention clearer.</p> <p><input checked="" type="checkbox"/> Dion McMurtrie contact GG to track down where "expressions" came from and confirm the use case is? Has been there for some time. Posted on chat.fhir.org at https://chat.fhir.org/#narrow/stream/89-snomed/topic/SNOMED.20CT.20filters</p>																
code	description	operator	value																															
concept	Filter that includes concepts based on their logical definition. e.g. [concept] [is-a] [x] - include all concepts with an is-a relationship to concept x, or [concept] [in] [x]- include all concepts in the reference set identified by concept x	is-a in	A SNOME D CT code																															
expression	The result of the filter is the result of executing the given SNOMED CT Expression Constraint	=	A SNOME D CT ECL expression (see ecl)																															
expressions	Whether post-coordinated expressions are included in the value set	=	true or false
