2018-05-23 - SLPG Meeting

Date & Time

20:00 UTC Wednesday 23rd May 2018

Teleconference Details

To join the meeting please go to https://snomed.zoom.us/j/471420169.

Further information can be found at SLPG meeting information

Attendees

- Chair: Linda Bird
- Project Group: Ed Cheetham, Rob Hausam, Michael Lawley, Andrew Perry, Anne Randorff Højen

Agenda and Meeting Notes

Goals

- Progress SNOMED Query language
 O Discuss use of multiple language reference sets
- - ° Transitive relationships in ECL
 - Ability to execute maps from within ECL

Apologies

Description	Owner	Notes
Welcome and apologies	Linda Bird	
Query Language - Recap from previous meetings	Linda Bird	Examples: version and language <<64572001 [Disease] {{ term = "*heart*" }} VERSION http://snomed.info/sct/9000000000207008 /version/20180131 <<64572001 [Disease] {{ synonym = "*heart*" }} VERSION http://snomed.info/sct /9000000000000000000000000000000000000
		 Allow nested where, version, language Scope of variables is inner query

Examples: where
 X MINUS >! X WHERE X = (<< 1234 : 5678 = << 6547) X MINUS >! X WHERE X = (<< 1234 : 5678 = << 6547) VERSION http://snomed.info/sct /9000000000207008/version/20180131 X MINUS >! Y WHERE X = (<< 1234 : 5678 = << 6547) Y = (<< 1456) VERSION http://snomed.info/sct /90000000000207008/version/20180131 X MINUS >! X WHERE X = (<< 1234 : 5678 = << 6547) VERSION http://snomed.info/sct /9000000000207008/version/20180131 , LANGUAGE 9000000000000000000000000000000000000
Notes
 Allow nested variable definitions, but recommend that people don't due to readability Scope of variables is the inner query No recursion e.g X WHERE X = 1234 MINUS X ie can't use a variable in its own definition ie X is only known on the left of the corresponding WHERE, and not on the right of the WHE RE

- Recap from previous meetings	Bird	 D.term D.term = "*heart*" D.term = wild:"*heart*" D.term = regex: ".*heart.*" D.term = match: "hear att" D.term = (sv) wild: "*heart*" D.languageCode D.languageCode = "en" D.languageCode = "es" D.caseSignificanceId D.caseSignificanceId = 90000000000448009 entire term case insensitive D.caseSignificanceId = 9000000000017005 entire term case sensitive D.caseSignificanceId = 900000000000020002 only initial character case insensitive D.caseSignificance = "insensitive" D.caseSignificance = "insensitive" D.caseSignificance = "insensitive" D.caseSignificance = "insensitive"

		Unacceptable Terms

Query Language - Combining language reference sets	Linda Bird	 How do we support language preferences, which are defined over multiple language reference sets? For example: Suggestions: Use 'OR' to indicate additive (except for PT), and ';' to indicate priority order (with concept-level override). For example: LANGUAGE 9999999 Canadian French language reference set ; 90000000000508004 Canadian English Priority order: This means that if a concept has descriptions in the first LRS, then this LRS is used. But if a concept has no descriptions in the first LRS, then is used LANGUAGE 99999 Realm-specific LRS OR 999999 National LRS (Must have disjoint PTs) LANGUAGE 99999 Realm-specific LRS THEN 999999 National LRS Changing preferred term in a local edition (OR update PT row from national edition) (or perhaps add additional local colloquism) Additive: This means that if a concept has a PT in both LRSs, then the PTs in the Paediatric LRS take priority, and the PT in the GB English LRS becomes acceptable. Other terms are acceptable if they are acceptable in either LRS. LANGUAGE 99999 X ELSE (99999 Y LRS ADD 9999 Z LRS) Priority order and Additive: This means that if a concept has a PT in both LRSs, then the PTs in the Paediatric LRS take priority, and the PT in the GB English LRS becomes acceptable. Other terms are acceptable if they are acceptable in either LRS. CANGUAGE 99999 X ELSE (99999 Y LRS ADD 9999 Z LRS) Priority order and Additive: This means that if a concept has a PT in both LRSs, then the PTs in the Paediatric LRS take priority, and the PT in the GB English LRS becomes acceptable. Other terms are acceptable if they are acceptable in either LRS. Conclusions - STILL UNDER DISCUSSION
URI Specification	Linda Bird	 Status update URIs for canonical normal form and necessary (long/short) normal form Recap on purpose of SNOMED CT computable language URIs? Recap on language instance URIs (e.g. URIs for expressions and expression constraints)
Other topics	Linda Bird	 Other topics for discussion. For example: Query language - Can we de-scope relationship filters? ECL suggestions - Ability to execute maps in ECL The specific use-case here comes initially from Jeremy and relates to being able to work with inactive concepts via the historical association maps. For example, given an ECL expression, e, that identifies a set of concepts to be used for retrieving patient records, you probably also want to retrieve records for sameAs(e) and replacedWith(e)
Confirm next meeting date /time	Linda Bird	The next SLPG meeting will be held in 2 weeks at 20:00 UTC on Wednesday 6th June.
