Defects Corrected

No legacy defect changes in this release.

Validation report assertion changes since last scheduled release

All platforms

None since last release.

International only

None since last release.

Managed Service only

None since last release.

Additional Notes

This is a maintenance release to move the Terminology Server to the SnowOwl 6.* stream (previous releases were SnowOwl 5.*). This update is needed for future maintenance and technical support of the platform using the SnowOwl Terminology Server. Whilst gaining some benefits (for instance improved ECL support) through the improvements inherent to this later version of SnowOwl, this release focuses purely on stability of the updated platform and like-for-like functionality with the previous AP Version 3.3.0 release - there are no added features, legacy improvements or legacy bug fixes in this version.

Module versions in this deployment

Module	Version	Deployment notes
Authoring-Services (API)	5.10.2	New
