Known Issues in the first public release (for subsequent release fixing)

In the Report Details form for the Run New Query action, each report type has particular mandatory fields marked on the form, which must have content entered for the query to run successfully. In this first production version the Run Query action will allow starting a report without pre-validating all mandatory field contents, and the run may fail if any do not contain appropriate content. Subsequent releases will implement full form validation prior to submission, to avoid running a query with incomplete mandatory details.

Additional Notes

This is the first production release of the Reporting Platform. The Known Issues section will be replaced in subsequent release notes with Defects Corrected in the release.

Module versions in this deployment

Module	Version	Deployment notes
reporting-ui	1.0.7	First production release version.
reporting-engine	3.3.0	First production release version.
