

grouper concept

A [concept definition](#) that provides a [definition](#) for [subtypes](#) that are always and necessarily true.

Notes

- The *grouper concept* must be sufficiently defined and clinically useful for the purpose of organizing content for an intensional reference set or in expression constraint language (ECL).

Examples

- An intensional reference set: *disease of colon and all of its descendants*
- Expression constraint language (ECL): 128524007 |Disorder of colon (disorder)|

Alternatives

- **Grouper**
