As we receive many questions on the implementation of the Snowstorm REST API, I have made a simple Python client and published this on Github.

[https://github.com/mertenssander/python\\_snowstorm\\_client](https://github.com/mertenssander/python_snowstorm_client)

The documentation is sparse, but Python code is fairly easily readable and this code can give developers handholds for understanding the Snomed/Snowstorm API logic. I am happy to answer any questions here or on Github, and of course suggestions or forks/pull requests are more than welcome!
